

Index

- 1-block, 67
- BN -pair, 7
- F -conjugacy, 172
- W -linkage, 89
- \mathbb{F}_q -rank, 172
- p -block, 67
- p -modular system, 159
- p -rank, 151
- p -regular class, 16
- p -regular element, 16, 45
- p -regular weight, 25
- p^f -restricted, 14

- adjoint group, 2
- affine Weyl group, 24
- alcove, 25
- associated Chevalley group, 205

- baby Verma module, 88
- bad prime, 179
- basic invariants, 199
- BGG reciprocity, 133
- block, 67
- block algebra, 67
- bounded module, 156
- Brauer character, 45
- Brauer lifting, 204
- Brauer reciprocity, 161
- Brauer tree, 83, 131, 163
- Bruhat decomposition, 7

- Cartan homomorphism, 161
- Cartan invariants, 76, 101
- Cartan matrix, 76, 101
- Cartan–Brauer triangle, 161
- category \mathcal{O} , 133

- Chevalley group, 5
- Chevalley–Bruhat ordering, 25
- cohomology variety, 153
- complexity, 151
- contragredient module, 11
- contravariant form, 13, 27
- Coxeter group, 7
- Coxeter number, 25
- Curtis–Alvis duality, 174
- cuspidal character, 173, 174
- cyclic block, 163

- decomposition matrix, 102, 160
- defect group, 69
- defect of a block, 68
- defect of conjugacy class, 68
- Deligne–Lusztig character, 171
- discrete series, 174
- distribution algebra, 13
- DL character, 171
- dot action, 25
- dual group, 180
- dual module, 11

- endotrivial module, 77
- extended affine Weyl group, 89, 177
- extremal composition factor, 182

- facet, 184
- finite representation type, 73
- first Cartan invariant, 103
- formal Brauer character, 46
- formal character, 10
- formal character ring, 10
- Frobenius kernel, 13

- Frobenius map, 4
 Frobenius twist, 15
 fundamental module, 37
- Gel'fand–Graev character, 180
 generalized character, 173
 generic cohomology, 147
 geometric conjugacy, 173
 geometric conjugacy class, 174
 good filtration, 53
 good prime, 179
 Green function, 174
 Green ring, 57
 Grothendieck ring, 46
- head, 130
 highest weight, 10
 highest weight vector, 10, 62
 Hochschild cohomology, 145
 hyperalgebra, 13
- index of connection, 25
 isogeny, 1
- Jantzen condition, 30
 Jantzen filtration, 28
- Kempf's Vanishing Theorem, 24
 Kostant partition function, 34
- Landrock's Lemma, 130
 Lang map, 4
 Langlands dual, 180
 Linkage Principle, 26
 linked weights, 25
 Loewy length, 130
 Loewy series, 129
 lowest alcove, 25
- maximal vector, 10
 maximally split torus, 172
 minimal projective resolution, 131
 modular character, 159
 modular representation, 159
- natural ordering, 9
 nilpotent variety, 153
 nonsplit, 2
 nullcone, 153
- ordinary character, 159
 ordinary representation, 159
- periodic module, 131, 156
 PIM, 76
 principal block, 67
 principal indecomposable module, 76
 principal series, 63, 134, 174
 proper character, 173
- quasisplit, 1
- radical, 129
 radical series, 129
 rank, 2
 rank of BN -pair, 7
 rank variety, 152
 rational cohomology, 145
 Ree group, 205
 regular character, 180
 representation ring, 57
 representation type, 73
 restricted enveloping algebra, 13
 restricted Lie algebra, 13
 restricted nullcone, 153
 restricted representation, 13
 rigid module, 130
 root system, 2
- self-extension, 123
 semisimple character, 179
 simply connected group, 2
 socle, 53, 129
 socle series, 129
 source, 72
 special isogeny, 43
 split BN -pair, 8
 split over k , 2
 splitting field, 42
 standard character data, 9
 standard Frobenius map, 3
 standard parabolic subgroup, 11
 Steinberg character, 77, 163
 Steinberg module, 27
 strong linkage, 26
 strongly split BN -pair, 8, 72
 Sum Formula, 28
 support variety, 152, 153
 Suzuki group, 205
