|--|-----------------|
| <i>Preface</i>                               | <i>page vii</i> |
| <b>1 Sampling methods</b>                    | <b>1</b>        |
| 1.1 Accuracy and precision                   | 3               |
| 1.2 Design effect and sample size            | 4               |
| 1.3 Defining the objectives                  | 5               |
| 1.4 Defining the constraints                 | 9               |
| 1.5 Defining the population                  | 10              |
| 1.6 Sampling frames                          | 11              |
| 1.7 Simple random sampling                   | 16              |
| 1.8 Multi-stage sampling                     | 17              |
| 1.9 Stratification                           | 18              |
| 1.10 Post-stratification                     | 22              |
| 1.11 Systematic (interval) sampling          | 23              |
| 1.12 Cluster sampling                        | 24              |
| 1.13 Complex samples                         | 25              |
| 1.14 Selection with unequal probability      | 25              |
| 1.15 Non-response                            | 32              |
| 1.16 Quota sampling                          | 36              |
| 1.17 Other non-probability sampling methods  | 41              |
| 1.18 Sampling small populations              | 42              |
| 1.19 Some final thoughts                     | 43              |
| <b>2 Weighting</b>                           | <b>45</b>       |
| 2.1 Principles                               | 45              |
| 2.2 Methods of weighting samples             | 51              |
| 2.3 Cell weighting                           | 52              |
| 2.4 Marginal weighting                       | 55              |
| 2.5 Aggregate weighting                      | 66              |
| 2.6 Multi-stage and hybrid weighting systems | 74              |

| VI       | CONTENTS   |
|----------|--|
| 2.7      | Statistical considerations 75  |
| 2.8      | Ethical considerations 77  |
| <b>3</b> | <b>Statistical effects of sampling and weighting 79</b>                |
| 3.1      | Calculation of variance 80   |
| 3.2      | Design effect and effective sample size 90                             |
| 3.3      | Weighting effect and calibrated sample size 105                        |
| 3.4      | Missing data 132   |
| <b>4</b> | <b>Significance testing 140</b>  |
| 4.1      | The purpose and philosophy of significance testing 140                 |
| 4.2      | Principles of significance testing 151                                 |
| 4.3      | Choosing a test 155  |
| 4.4      | Testing particular values of a mean or proportion 157                  |
| 4.5      | Testing the difference between means or proportions 159                |
| 4.6      | The chi-square test of fit 165   |
| 4.7      | Testing homogeneity and independence 168                               |
| <b>5</b> | <b>Measuring relationships between variables 172</b>                   |
| 5.1      | Analysis of contingency tables 172                                     |
| 5.2      | Multivariate techniques 192  |
| 5.3      | Regression analysis for weighted data 197                              |
| 5.4      | Classification and regression trees 200                                |
| 5.5      | Cluster analysis for categorical variables 206                         |
| 5.6      | Data fusion 215  |
|          | <i>Appendix A: Review of general terminology 227</i>                   |
|          | <i>Appendix B: Further reading 237</i>                                 |
|          | <i>Appendix C: Summary tables for several common distributions 239</i> |
|          | <i>Appendix D: Chapter 2 mathematical proofs 241</i>                   |
|          | <i>Appendix E: Chapter 3 mathematical proofs 244</i>                   |
|          | <i>Appendix F: Chapter 4 mathematical proofs 249</i>                   |
|          | <i>Appendix G: Chapter 5 mathematical proofs 250</i>                   |
|          | <i>Appendix H: Statistical tables 255</i>                              |
|          | <i>References 261</i>  |
|          | <i>Index 264</i>   |
