## THE PHILOSOPHY OF ECONOMICS

This is a comprehensive anthology of works on the philosophy of economics, including classic texts and essays exploring specific branches and schools of economics. Other than the classics, most of the selections in the third edition are new, and both the comprehensive introduction and the bibliography have been revamped to bring the volume up to date. The volume contains twenty-six chapters organized into five parts: (I) Classic Discussions, (II) Positivist and Popperian Views, (III) Ideology and Normative Economics, (IV) Branches and Schools of Economics and Their Methodological Problems, and (V) New Directions in Economic Methodology. It includes crucial historical contributions by figures such as Mill, Marx, Weber, Robbins, Knight, and Veblen, as well as works by the leading contemporary figures writing on economic methodology, including five Nobel Laureates in Economics.

Daniel M. Hausman is Herbert A. Simon Professor in the Department of Philosophy at the University of Wisconsin–Madison. He previously taught at the University of Maryland at College Park and Carnegie Mellon University. His research has focused on methodological, metaphysical, and ethical issues at the boundaries between economics and philosophy. In collaboration with Michael McPherson, he founded the Cambridge University Press journal *Economics and Philosophy* and edited it for its first ten years. His most important books include *Capital, Profits and Prices* (1981) *The Inexact and Separate Science of Economics* (1992), *Causal Asymmetries* (1998) and, coauthored with Michael McPherson, *Economic Analysis and Moral Philosophy* (1996) and its expanded second edition, *Economic Analysis, Moral Philosophy and Public Policy* (2006).
