---

- adjoint operator, 99
- adjoint representation, 53
- automorphism (of a Lie algebra), 51
  
- Bessel function, 209
- Bochner–Hecke relations, 211
  
- Campbell–Hausdorff formula, 46
- Cartan’s criterion, 65
- Casimir operator, 120
- Cauchy determinant, 282
- Cauchy inequality, 284
- Cayley transform, 93
- centre (of a Lie algebra), 54
- character, 97, 110, 115
- character formula, 257
- Clebsch–Gordan coefficients, 112, 151
- compact operator, 100
- complex type (representation of), 124
- conjugate (representation), 113
- contragredient (representation), 112
- covering, 54
  
- decomposition (Gauss), 16
- decomposition (Gram), 13
- decomposition (polar), 8
- derivation, 51
- derived group, 56
- derived ideal, 57
- derived representation, 53
- derived series, 57
- descending central series, 57
- differential form, 82, 83
- dimension formula, 259
- Dirichlet problem, 215
  
- disjoint representations, 124
- divergence, 213
  
- Engel’s Theorem, 60
- equivalent representations, 52, 96
- Euler angles, 135
- exponential of a matrix, 18
  
- Fourier coefficient, 109, 167
- Fourier series, 158, 168
- Funk–Hecke Theorem, 205
  
- Gauss’ Theorem, 213
- Gegenbauer polynomial, 220
- Green’s formula, 214
- Green’s kernel, 215
  
- Haar measure, 74
- harmonic, 195, 212
- heat equation, 172, 176, 225, 292
- heat kernel, 173, 178, 225, 292
- Heisenberg Lie algebra, 57
- highest weight, 251
- Hilbert–Schmidt (norm of), 109
- holomorphic representations, 261
  
- ideal, 52
- identity component, 1
- intertwining operator, 52, 96
- invariant subspace, 52, 95
  
- Jacobi identity, 38, 50
  
- Killing form, 63
  
- Laplace equation, 195, 212
- Laplace operator, 162, 193

- Levi decomposition, 68
- Levi–Malcev Theorem, 68
- Levi subalgebra, 68
- Lie algebra, 38, 50
- Lie’s Theorem, 60
- linear group, 3
- linear group (special), 5
- linear Lie group, 36
- logarithm of a matrix, 25
  
- mean value property, 215
- module (of a group), 75
- modulus (of a differential form), 84
- morphism (of Lie algebras), 40
  
- nilpotent Lie algebra, 57
- nilpotent part (of an endomorphism), 65
- nutaton angle, 136
  
- one parameter subgroup, 36
- orbital integral, 242
- orthogonal group, 5
- orthogonal group (special), 6
  
- Plancherel’s Theorem, 110
- Poisson kernel, 216
- Poisson summation formula, 174, 294
- polynomial representation, 264
- precession angle, 136
- proper rotation angle, 136
- pseudo-orthogonal group, 6
- pseudo-unitary group, 7
  
- quaternionic type (representation of), 124
- quotient representation, 52, 96
  
- radial part (of the Laplace operator), 191, 238, 289
- radical (of a Lie algebra), 60
- regular function, 261
  
- representation (of a group), 52, 95
- representation (of a Lie algebra), 52
- reproducing kernel, 202
- Rodrigues’ formula, 201
  
- Schur function, 257
- Schur orthogonality relations, 106
- Schur’s Lemma, 97
- self-adjoint operator, 99
- semi-simple Lie algebra, 63
- semi-simple part (of an endomorphism), 65
- Shilov boundary, 286
- simple Lie algebra, 62
- solvable group, 56
- solvable Lie algebra, 57
- spherical harmonic, 196
- spherical polynomial, 200
- stereographic projection, 149, 227
- Stone–Weierstrass Theorem, 111
- structure constants, 50
- submanifold, 41
- subrepresentation, 52, 95
- symmetric function (complete), 268
- symmetric function (elementary), 266
- symplectic group, 7
  
- Taylor coefficient (generalised), 284
- topological group, 1
- triangular group (upper), 7
  
- unimodular group, 75
- unitary group, 7
- unitary operator, 96
  
- Vandermonde polynomial, 253
- vector field, 82
  
- weight (of a representation), 250
- Weyl integration formula, 232, 237, 254
  
- zonal function, 188
