Introduction	1
List of Notations	6
Chapter I	
Background	7
1.1 Elliptic curves	8
1.2 Hasse-Weil L -functions	15
1.3 Structure of the Mordell-Weil group	18
1.4 The conjectures of Birch and Swinnerton-Dyer	22
1.5 Modular forms and Hecke algebras	26
Chapter II	
p -Adic L -functions and Zeta Elements	31
2.1 The p -adic Birch and Swinnerton-Dyer conjecture	31
2.2 Perrin-Riou's local Iwasawa theory	34
2.3 Integrality and (φ, Γ) -modules	39
2.4 Norm relations in K -theory	43
2.5 Kato's p -adic zeta-elements	46
Chapter III	
Cyclotomic Deformations of Modular Symbols	50
3.1 \mathcal{Q} -continuity	50
3.2 Cohomological subspaces of Euler systems	56
3.3 The one-variable interpolation	60
3.4 Local freeness of the image	64
Chapter IV	
A User's Guide to Hida Theory	70
4.1 The universal ordinary Galois representation	70
4.2 Λ -adic modular forms	72
4.3 Multiplicity one for I -adic modular symbols	76
4.4 Two-variable p -adic L -functions	80

Chapter V

Crystalline Weight Deformations	86
5.1 Cohomologies over deformation rings	87
5.2 p -Ordinary deformations of B_{cris} and D_{cris}	92
5.3 Constructing big dual exponentials	96
5.4 Local dualities	101

Chapter VI

Super Zeta-Elements	108
6.1 The \mathcal{R} -adic version of Kato's theorem	109
6.2 A two-variable interpolation	118
6.3 Applications to Iwasawa theory	128
6.4 The Coleman exact sequence	132
6.5 Computing the $\mathcal{R}[[\Gamma]]$ -torsion	137

Chapter VII

Vertical and Half-Twisted Arithmetic	141
7.1 Big Selmer groups	142
7.2 The fundamental commutative diagrams	147
7.3 Control theory for Selmer coranks	159

Chapter VIII

Diamond-Euler Characteristics: the Local Case	165
8.1 Analytic rank zero	166
8.2 The Tamagawa factors away from p	169
8.3 The Tamagawa factors above p (the vertical case)	173
8.4 The Tamagawa factors above p (the half-twisted case)	180
8.5 Evaluating the covolumes	183

Chapter IX

Diamond-Euler Characteristics: the Global Case	191
9.1 The Poitou-Tate exact sequences	192
9.2 Triviality of the compact Selmer group	197
9.3 The p -adic weight pairings	201
9.4 Commutativity of the bottom squares	208
9.5 The leading term of $\text{III}_F(\mathbb{T}_{\infty, E})$	214
9.6 Variation under the isogeny $\vartheta : E \rightarrow \mathcal{C}^{\min}$	219

Contents

ix

Chapter X

Two-Variable Iwasawa Theory of Elliptic Curves	222
10.1 The half-twisted Euler characteristic formula	223
10.2 The p -adic height over a double deformation	228
10.3 Behaviour of the characteristic ideals	230
10.4 The proof of Theorems 10.8 and 10.11	234
10.5 The main conjectures over weight-space	243
10.6 Numerical examples, open problems	246

Appendices

A: The Primitivity of Zeta Elements	252
B: Specialising the Universal Path Vector	257
C: The Weight-Variable Control Theorem (by Paul A. Smith)	260
C.1 Notation and assumptions	260
C.2 Properties of affinoids	262
C.3 The cohomology of a lattice \mathbb{L}	264
C.4 Local conditions	265
C.5 Dualities via the Ext-pairings	269
C.6 Controlling the Selmer groups	273

Bibliography	275
Index	280
