Medicine and Society in Early Modern Europe

Second Edition

Medicine and Society in Early Modern Europe offers students a concise introduction to health and healing in Europe from 1500 to 1800. Bringing together the best recent research in the field, Mary Lindemann examines medicine from a social and cultural perspective, rather than a narrowly scientific one. Drawing on medical anthropology, sociology, and ethics, as well as cultural and social history, she focuses on the experience of illness and on patients and folk healers as much as on the rise of medical science, doctors, and hospitals. This second edition has been updated and revised throughout in content, style, and interpretations, and new material has been added, in particular, on colonialism, exploration, and women. Accessibly written and full of fascinating insights, this will be essential reading for all students of the history of medicine and will provide invaluable context for students of early modern Europe more generally.

MARY LINDEMANN is Professor of History at the University of Miami. Her publications include *Health and Healing in Eighteenth-Century Germany* (1996), which was awarded the 1998 William Welch Book Medal Prize by the American Association for the History of Medicine.

NEW APPROACHES TO EUROPEAN HISTORY

Series editors

WILLIAM BEIK *Emory University*

T. C. W. BLANNING *Sidney Sussex College, Cambridge*

BRENDAN SIMMS *Peterhouse, Cambridge*

New Approaches to European History is an important textbook series, which provides concise but authoritative surveys of major themes and problems in European history since the Renaissance. Written at a level and length accessible to advanced school students and undergraduates, each book in the series addresses topics or themes that students of European history encounter daily: the series embraces both some of the more “traditional” subjects of study and those cultural and social issues to which increasing numbers of school and college courses are devoted. A particular effort is made to consider the wider international implications of the subject under scrutiny.

To aid the student reader, scholarly apparatus and annotation is light, but each work has full supplementary bibliographies and notes for further reading; where appropriate, chronologies, maps, diagrams, and other illustrative material are also provided.

For a list of titles published in the series, please see the end of the book.

Acknowledgments

It has been over ten years since the first edition of *Medicine and Society* appeared. Since then, my intellectual and personal debts have accumulated. Once again I must especially thank the Wellcome Trust Centre for the History of Medicine at UCL for making me a Research Affiliate during summer 2008 when I began the process of rewriting. The Centre and the Wellcome Library were exceedingly pleasant places to work and, as always, their staffs were more than helpful. Particular debts of gratitude, however, must be paid to the Director, Hal Cook, and to my two special friends there, Sally Bragg and Tilli Tansey. In addition, a number of members of the Centre and visiting scholars provided intellectual stimulation and companionship: Roger Cooter, Bruce Moran, Constance Berman, Alisha Rankin, and Wendy Churchill. Claudia Stein (University of Warwick) is a good friend and a terrific historian and I have much benefitted from years of conversations with her. A special thank you must go to Rima Apple whose good sense was much appreciated when she reminded me “You don’t have to rewrite *every* sentence, you know!” Mary Fissell’s work has been particularly influential in these revisions and she will recognize where and how often. Michael Watson at Cambridge University Press was both an encouraging and a patient editor. Finally, and as always, I must thank my spouse, Michael Miller, who has lived with this book now not once but twice.
