<i>Foreword</i>	<i>page xi</i>
Introduction	1
<b>Part I An introduction to Galois cohomology</b>	<b>11</b>
<b>I Infinite Galois theory</b>	<b>13</b>
I.1 Reminiscences on field theory	13
I.2 Galois theory	17
I.2.1 Definitions and first examples	17
I.2.2 The Galois correspondence	18
I.2.3 Morphisms of Galois extensions	19
I.2.4 The Galois group as a profinite group	21
Exercises	24
<b>II Cohomology of profinite groups</b>	<b>26</b>
II.3 Cohomology sets: basic properties	26
II.3.1 Definitions	26
II.3.2 Functoriality	36
II.3.3 Cohomology sets as a direct limit	41
II.4 Cohomology sequences	45
II.4.1 The case of a subgroup	46
II.4.2 The case of a normal subgroup	51
II.4.3 The case of a central subgroup	52
II.5 Twisting	56
II.6 Cup-products	61
Exercises	64
<b>III Galois cohomology</b>	<b>69</b>
III.7 Warm-up	69
III.7.1 Digression: categories and functors	69

	III.7.2	Algebraic group-schemes	77
	III.7.3	The Galois cohomology functor	85
III.8		Abstract Galois descent	96
	III.8.1	Matrices reloaded	97
	III.8.2	Actions of group-valued functors	99
	III.8.3	Twisted forms	101
	III.8.4	The Galois descent condition	103
	III.8.5	Stabilizers	104
	III.8.6	Galois descent lemma	106
	III.8.7	Hilbert's Theorem 90	110
III.9		First applications of Galois descent	117
	III.9.1	Galois descent of algebras	117
	III.9.2	The conjugacy problem	121
	III.9.3	Cup-products with values in $\mu_2$	126
		Exercises	130
<b>IV</b>		<b>Galois cohomology of quadratic forms</b>	<b>134</b>
IV.10		Algebraic group-schemes associated to quadratic forms	134
	IV.10.1	Quadratic forms over rings	134
	IV.10.2	Orthogonal groups	136
	IV.10.3	Clifford groups and spinors	139
IV.11		Galois cohomology of quadratic forms	145
	IV.11.1	Galois cohomology of orthogonal groups	145
	IV.11.2	Galois cohomology of spinors	147
IV.12		Cohomological invariants of quadratic forms	152
	IV.12.1	Classification of quadratic forms over $\mathbb{Q}$	152
	IV.12.2	Higher cohomological invariants	154
		Exercises	158
<b>V</b>		<b>Étale and Galois algebras</b>	<b>160</b>
V.13		Étale algebras	160
V.14		Galois algebras	164
	V.14.1	Definition and first properties	164
	V.14.2	Galois algebras and Galois cohomology	170
		Exercises	177
<b>VI</b>		<b>Group extensions, Galois embedding problems and Galois cohomology</b>	<b>179</b>
VI.15		Group extensions	179
VI.16		Galois embedding problems	185
		Exercises	187
<b>Part II</b>		<b>Applications</b>	<b>189</b>
<b>VII</b>		<b>Galois embedding problems and the trace form</b>	<b>191</b>
VII.17		The trace form of an étale algebra	192

<i>Contents</i>		ix
VII.18	Computation of $e^*(s_n)$	196
VII.19	Applications to inverse Galois theory	200
	Exercises	205
<b>VIII</b>	<b>Galois cohomology of central simple algebras</b>	<b>207</b>
VIII.20	Central simple algebras	207
VIII.21	Algebras with involutions	217
	VIII.21.1 Basic concepts	217
	VIII.21.2 Hyperbolic involutions	222
	VIII.21.3 Similitudes	226
	VIII.21.4 Cohomology of algebras with involution	228
	VIII.21.5 Trace forms	231
	Exercises	245
<b>IX</b>	<b>Digression: a geometric interpretation of <math>H^1(-, G)</math></b>	<b>249</b>
IX.22	Reminiscences on schemes	249
IX.23	Torsors	253
	Exercises	259
<b>X</b>	<b>Galois cohomology and Noether's problem</b>	<b>261</b>
X.24	Formulation of Noether's problem	261
X.25	The strategy	262
X.26	Residue maps	265
X.27	An unramified cohomological invariant	271
X.28	Proof of Theorem X.24.1	272
<b>XI</b>	<b>The rationality problem for adjoint algebraic groups</b>	<b>274</b>
XI.29	$R$ -equivalence groups	275
XI.30	The rationality problem for adjoint groups	278
XI.31	Examples of non-rational adjoint groups	281
	Exercises	287
<b>XII</b>	<b>Essential dimension of functors</b>	<b>290</b>
XII.32	Essential dimension: definition and first examples	290
XII.33	First results	292
XII.34	Cohomological invariants and essential dimension	296
XII.35	Generic objects and essential dimension	298
XII.36	Generically free representations	300
XII.37	Some examples	301
XII.38	Complements and open problems	306
	Exercises	308
