

Contents

	<i>Preface</i>	<i>page vii</i>
1	t-algebras and differentials	1
2	Ditalgebras and modules	4
3	Bocses, ditalgebras and modules	13
4	Layered ditalgebras	18
5	Triangular ditalgebras	23
6	Exact structures in $\mathcal{A}\text{-Mod}$	32
7	Almost split conflations in $\mathcal{A}\text{-Mod}$	47
8	Quotient ditalgebras	56
9	Frames and Roiter ditalgebras	66
10	Product of ditalgebras	71
11	Hom-tensor relations and dual basis	74
12	Admissible modules	82
13	Complete admissible modules	98
14	Bimodule filtrations and triangular admissible modules	108
15	Free bimodule filtrations and free ditalgebras	117
16	\mathcal{A}^X is a Roiter ditalgebra, for suitable X	128
17	Examples and applications	133
18	The exact categories $\mathcal{P}(\Lambda)$, $\mathcal{P}^1(\Lambda)$ and $\Lambda\text{-Mod}$	144
19	Passage from ditalgebras to finite-dimensional algebras	154
20	Scalar extension and ditalgebras	169
21	Bimodules	184
22	Parametrizing bimodules and wildness	197
23	Nested and seminested ditalgebras	215
24	Critical ditalgebras	246
25	Reduction functors	260
26	Modules over non-wild ditalgebras	272

27	Tameness and wildness	284
28	Modules over non-wild ditalgebras revisited	292
29	Modules over non-wild algebras	314
30	Absolute wildness	327
31	Generic modules and tameness	335
32	Almost split sequences and tameness	345
33	Varieties of modules over ditalgebras	360
34	Ditalgebras of partially ordered sets	376
35	Further examples of wild ditalgebras	384
36	Answers to selected exercises	397
