## Contents

	<i>Preface</i>	<i>page ix</i>
<b>1</b>	<b>Perspective on heliophysics</b>	<b>1</b>
	<i>George L. Siscoe and Carolus J. Schrijver</i>	
	1.1 Universal processes: “laws” of space weather	1
	1.2 Pressure, gravity, and electromagnetism	2
	1.3 Structure and dynamics of the local cosmos	5
	1.4 Energetic particles	8
	1.5 Weather and climate in space	9
	1.6 Universal processes in the local cosmos and instrumentation	12
<b>2</b>	<b>Introduction to space storms and radiation</b>	<b>15</b>
	<i>Sten Odenwald</i>	
	2.1 Introduction	15
	2.2 Uncovering the Sun–Earth connection	16
	2.3 Human impacts of space weather	17
	2.4 Impacts of solar flares	25
	2.5 The satellite era	28
	2.6 How bad can it get?	35
	2.7 Outside the box	38
	2.8 Space weather awareness	38
	2.9 Space weather forecasting	40
<b>3</b>	<b><i>In-situ</i> detection of energetic particles</b>	<b>43</b>
	<i>George Gloeckler</i>	
	3.1 Introduction	43
	3.2 What needs to be measured and how it is measured?	46
	3.3 Geometrical factor of detectors	47
	3.4 Energy loss of energetic particles by ionization	48
	3.5 Simple particle detectors	52

vi	<i>Contents</i>	
	3.6 Energy analyzers	62
	3.7 Time-of-flight telescopes	66
	3.8 Space instruments measuring composition	67
<b>4</b>	<b>Radiative signatures of energetic particles</b>	<b>79</b>
	<i>Tim Bastian</i>	
	4.1 Overview of the electromagnetic spectrum	79
	4.2 Preliminaries	87
	4.3 Radiation from energetic particles	93
	4.4 New observations, new questions	116
<b>5</b>	<b>Observations of solar and stellar eruptions, flares, and jets</b>	<b>123</b>
	<i>Hugh Hudson</i>	
	5.1 Introduction	123
	5.2 Overview of flare properties	125
	5.3 The basic phenomena of a solar flare	131
	5.4 Flare energetics	142
	5.5 Flare analogs	144
	5.6 Observational aspects of magnetic reconnection	151
	5.7 Conclusions	157
<b>6</b>	<b>Models of coronal mass ejections and flares</b>	<b>159</b>
	<i>Terry Forbes</i>	
	6.1 Recapitulation of key observational features	159
	6.2 Models	169
	6.3 Some topics for future research	191
<b>7</b>	<b>Shocks in heliophysics</b>	<b>193</b>
	<i>Merav Opher</i>	
	7.1 Introduction	193
	7.2 Why shocks happen: non-linear steepening and shocks	196
	7.3 Rankine–Hugoniot jump conditions	198
	7.4 Definition and classification of shocks	200
	7.5 Physical processes in shocks and future work	206
<b>8</b>	<b>Particle acceleration in shocks</b>	<b>209</b>
	<i>Dietmar Krauss-Varban</i>	
	8.1 Introduction	209
	8.2 Types of shocks and plasma parameters	210
	8.3 Kinetic shock physics	212
	8.4 Particle acceleration mechanisms at shocks	216
	8.5 Particle acceleration at the Earth's bow shock and at interplanetary shocks	223
	8.6 Summary	230

<i>Contents</i>		vii
<b>9</b>	<b>Energetic particle transport</b>	233
	<i>Joe Giacalone</i>	
	9.1 Cosmic rays in the solar system	233
	9.2 The motion of individual charged particles	239
	9.3 The cosmic-ray transport equation	245
	9.4 The diffusion tensor	253
	9.5 Some representative applications	256
<b>10</b>	<b>Energy conversion in planetary magnetospheres</b>	263
	<i>Vytenis Vasyliūnas</i>	
	10.1 Introduction	263
	10.2 Overview of disturbances in Earth's space environment	263
	10.3 Fundamentals of energy storage, transfer, and loss	267
	10.4 Energy budget of magnetospheres	273
	10.5 What leads to explosive energy releases?	283
	10.6 Applications: Earth	286
	10.7 Applications: other planets	289
	10.8 Concluding remarks	291
<b>11</b>	<b>Energization of trapped particles</b>	293
	<i>Janet Green</i>	
	11.1 Heliophysical particles: universal processes and problems	293
	11.2 Particle motion	296
	11.3 General characteristics of heliospheric particle radiation	302
	11.4 Radiation belt acceleration mechanisms	305
	11.5 Radiation belt particle losses	315
<b>12</b>	<b>Flares, coronal mass ejections, and atmospheric responses</b>	321
	<i>Timothy Fuller-Rowell and Stanley C. Solomon</i>	
	12.1 Introduction	321
	12.2 ITM responses to geomagnetic storms	323
	12.3 ITM responses to solar flares	346
	12.4 Conclusions	356
<b>13</b>	<b>Energetic particles and manned spaceflight</b>	359
	<i>Stephen Guetersloh and Neal Zapp</i>	
	13.1 Radiation protection: introduction	359
	13.2 Sources of radiation exposure during spaceflight	363
	13.3 Spaceflight operations	366
	13.4 The Constellation Program	368
	13.5 Environmental characterization	372
	13.6 Summary	378

viii

*Contents*

<b>14 Energetic particles and technology</b>	<b>381</b>
<i>Alan Tribble</i>	
14.1 Introduction	381
14.2 Overview of space environment effects	381
14.3 Effects of keV energy particles: spacecraft charging	385
14.4 Effects of MeV energy particles: total-dose effects	391
14.5 Effects of GeV energy particles: single-event effects	394
14.6 Modeling the GCR/SPE environment	398
<i>Appendix I Authors and editors</i>	401
<i>List of illustrations</i>	403
<i>List of tables</i>	410
<i>References</i>	411
<i>Index</i>	441

*The plates are to be found between pages 148 and 149.*
