Preface	xiii
Table of Dependence	xxi
Chapter 1 Sums of Independent Random Variables	1
1.1 Independence	1
1.1.1. Independent σ -Algebras	1
1.1.2. Independent Functions	4
1.1.3. The Rademacher Functions	5
Exercises for § 1.1	7
1.2 The Weak Law of Large Numbers	14
1.2.1. Orthogonal Random Variables	14
1.2.2. Independent Random Variables	15
1.2.3. Approximate Identities	16
Exercises for § 1.2	20
1.3 Cramér's Theory of Large Deviations	22
Exercises for § 1.3	31
1.4 The Strong Law of Large Numbers	35
Exercises for § 1.4	42
1.5 Law of the Iterated Logarithm	49
Exercises for § 1.5	56
Chapter 2 The Central Limit Theorem	59
2.1 The Basic Central Limit Theorem	60
2.1.1. Lindeberg's Theorem	60
2.1.2. The Central Limit Theorem	62
Exercises for § 2.1	65
2.2 The Berry–Esseen Theorem via Stein's Method	71
2.2.1. L^1 -Berry–Esseen	72
2.2.2. The Classical Berry–Esseen Theorem	75
Exercises for § 2.2	81
2.3 Some Extensions of The Central Limit Theorem	82
2.3.1. The Fourier Transform	82
2.3.2. Multidimensional Central Limit Theorem	84
2.3.3. Higher Moments	87
Exercises for § 2.3	90

2.4 An Application to Hermite Multipliers	96
2.4.1. Hermite Multipliers	96
2.4.2. Beckner's Theorem	101
2.4.3. Applications of Beckner's Theorem	105
Exercises for § 2.4	110
Chapter 3 Infinitely Divisible Laws	115
3.1 Convergence of Measures on \mathbb{R}^N	115
3.1.1. Sequential Compactness in $\mathbf{M}_1(\mathbb{R}^N)$	116
3.1.2. Lévy's Continuity Theorem	117
Exercises for § 3.1	119
3.2 The Lévy–Khintchine Formula	122
3.2.1. $\mathcal{I}(\mathbb{R}^N)$ Is the Closure of $\mathcal{P}(\mathbb{R}^N)$	123
3.2.2. The Formula	126
Exercises for § 3.2	137
3.3 Stable Laws	139
3.3.1. General Results	139
3.3.2. α -Stable Laws	141
Exercises for § 3.3	147
Chapter 4 Lévy Processes	151
4.1 Stochastic Processes, Some Generalities	152
4.1.1. The Space $D(\mathbb{R}^N)$	153
4.1.2. Jump Functions	156
Exercises for § 4.1	159
4.2 Discontinuous Lévy Processes	160
4.2.1. The Simple Poisson Process	161
4.2.2. Compound Poisson Processes	163
4.2.3. Poisson Jump Processes	168
4.2.4. Lévy Processes with Bounded Variation	170
4.2.5. General, Non-Gaussian Lévy Processes	171
Exercises for § 4.2	174
4.3 Brownian Motion, the Gaussian Lévy Process	177
4.3.1. Deconstructing Brownian Motion	178
4.3.2. Lévy's Construction of Brownian Motion	180
4.3.3. Lévy's Construction in Context	182
4.3.4. Brownian Paths Are Non-Differentiable	183
4.3.5. General Lévy Processes	185
Exercises for § 4.3	187

Contents

ix

Chapter 5 Conditioning and Martingales	193
5.1 Conditioning	193
5.1.1. Kolmogorov's Definition	194
5.1.2. Some Extensions	198
Exercises for § 5.1	202
5.2 Discrete Parameter Martingales	205
5.2.1. Doob's Inequality and Marcinkewitz's Theorem	206
5.2.2. Doob's Stopping Time Theorem	212
5.2.3. Martingale Convergence Theorem	214
5.2.4. Reversed Martingales and De Finetti's Theory	217
5.2.5. An Application to a Tracking Algorithm	221
Exercises for § 5.2	226
Chapter 6 Some Extensions and Applications of Martingale Theory	233
6.1 Some Extensions	233
6.1.1. Martingale Theory for a σ -Finite Measure Space	233
6.1.2. Banach Space-Valued Martingales	239
Exercises for § 6.1	240
6.2 Elements of Ergodic Theory	244
6.2.1. The Maximal Ergodic Lemma	245
6.2.2. Birkhoff's Ergodic Theorem	248
6.2.3. Stationary Sequences	251
6.2.4. Continuous Parameter Ergodic Theory	253
Exercises for § 6.2	256
6.3 Burkholder's Inequality	257
6.3.1. Burkholder's Comparison Theorem	257
6.3.2. Burkholder's Inequality	262
Exercises for § 6.3	263
Chapter 7 Continuous Parameter Martingales	266
7.1 Continuous Parameter Martingales	266
7.1.1. Progressively Measurable Functions	266
7.1.2. Martingales: Definition and Examples	267
7.1.3. Basic Results	270
7.1.4. Stopping Times and Stopping Theorems	272
7.1.5. An Integration by Parts Formula	276
Exercises for § 7.1	280
7.2 Brownian Motion and Martingales	282
7.2.1. Lévy's Characterization of Brownian Motion	282
7.2.2. Doob–Meyer Decomposition, an Easy Case	284
7.2.3. Burkholder's Inequality Again	289

Cambridge University Press

Contents

Exercises for § 7.2	290
7.3 The Reflection Principle Revisited	292
7.3.1. Reflecting Symmetric Lévy Processes	292
7.3.2. Reflected Brownian Motion	294
Exercises for § 7.3	298
Chapter 8 Gaussian Measures on a Banach Space	299
8.1 The Classical Wiener Space	299
8.1.1. Classical Wiener Measure	299
8.1.2. The Classical Cameron–Martin Space	303
Exercises for § 8.1	306
8.2 A Structure Theorem for Gaussian Measures	306
8.2.1. Fernique’s Theorem	306
8.2.2. The Basic Structure Theorem	307
8.2.3. The Cameron–Marin Space	310
Exercises for § 8.2	313
8.3 From Hilbert to Abstract Wiener Space	317
8.3.1. An Isomorphism Theorem	317
8.3.2. Wiener Series	318
8.3.3. Orthogonal Projections	322
8.3.4. Pinned Brownian Motion	326
8.3.5. Orthogonal Invariance	328
Exercises for § 8.3	330
8.4 A Large Deviations Result and Strassen’s Theorem	337
8.4.1. Large Deviations for Abstract Wiener Space	337
8.4.2. Strassen’s Law of the Iterated Logarithm	340
Exercises for § 8.4	342
8.5 Euclidean Free Fields	343
8.5.1. The Ornstein–Uhlenbeck Process	344
8.5.2. Ornstein–Uhlenbeck as an Abstract Wiener Space	346
8.5.3. Higher Dimensional Free Fields	349
Exercises for § 8.5	355
8.6 Brownian Motion on a Banach Space	358
8.6.1. Abstract Wiener Formulation	358
8.6.2. Brownian Formulation	361
8.6.3. Strassen’s Theorem Revisited	363
Exercises for § 8.6	365
Chapter 9 Convergence of Measures on a Polish Space	367
9.1 Prohorov–Varadarajan Theory	367
9.1.1. Some Background	367
9.1.2. The Weak Topology	370
9.1.3. The Lévy Metric and Completeness of $\mathbf{M}_1(E)$	377

Cambridge University Press

xi

Exercises for § 9.1	381
9.2 Regular Conditional Probability Distributions	386
9.2.1. Fiberizing a Measure	388
9.2.2. Representing Lévy Measures via the Itô Map	390
Exercises for § 9.2	392
9.3 Donsker's Invariance Principle	392
9.3.1. Donsker's Theorem	393
9.3.2. Rayleigh's Random Flights Model	396
Exercise for § 9.3	399
Chapter 10 Wiener Measure and Partial Differential Equations	400
10.1 Martingales and Partial Differential Equations	400
10.1.1. Localizing and Extending Martingale Representations	401
10.1.2. Minimum Principles	404
10.1.3. The Hermite Heat Equation	405
10.1.4. The Arcsine Law	407
10.1.5. Recurrence and Transience of Brownian Motion	411
Exercises for § 10.1	415
10.2 The Markov Property and Potential Theory	416
10.2.1. The Markov Property for Wiener Measure	416
10.2.2. Recurrence in One and Two Dimensions	417
10.2.3. The Dirichlet Problem	418
Exercises for § 10.2	426
10.3 Other Heat Kernels	429
10.3.1. A General Construction	429
10.3.2. The Dirichlet Heat Kernel	431
10.3.3. Feynman–Kac Heat Kernels	436
10.3.4. Ground States and Associated Measures on Pathspace	439
10.3.5. Producing Ground States	445
Exercises for § 10.3	449
Chapter 11 Some Classical Potential Theory	456
11.1 Uniqueness Refined	456
11.1.1. The Dirichlet Heat Kernel Again	456
11.1.2. Exiting Through $\partial_{\text{reg}}G$	459
11.1.3. Applications to Questions of Uniqueness	463
11.1.4. Harmonic Measure	468
Exercises for § 11.1	472
11.2 The Poisson Problem and Green Functions	475
11.2.1. Green Functions when $N \geq 3$	476
11.2.2. Green Functions when $N \in \{1, 2\}$	477
Exercises for § 11.2	486
11.3 Excessive Functions, Potentials, and Riesz Decompositions	487

Contents

11.3.1. Excessive Functions	488
11.3.2. Potentials and Riesz Decomposition	489
Exercises for § 11.3	496
11.4 Capacity	497
11.4.1. The Capacitory Potential	497
11.4.2. The Capacitory Distribution	500
11.4.3. Wiener's Test	504
11.4.4. Some Asymptotic Expressions Involving Capacity	507
Exercises for § 11.4	514
Notation	517
Index	521
