Parentheticals in Spoken English

Taking both an empirical and a theoretical view of the prosodic phrasing of parentheticals in English, this book reviews the syntactic and prosodic literature on parentheticals along with relevant theoretical work at the syntax–prosody interface. It offers a detailed prosodic analysis of six types of parentheticals; full parenthetical clauses, non-rerestrictive relative clauses, nominal appositions, comment clauses, reporting verbs and question tags, all taken from the spoken part of the British Component of the International Corpus of English. To date, the common assumption is that, by default, parentheticals are prosodically phrased separately, an assumption which, as this study shows, is not always in line with the predictions made by current prosodic theory. The present study provides new empirical evidence for the prosodic phrasing of parentheticals in spontaneous and semi-spontaneous spoken English, and offers new implications for a theory of linguistic interfaces.

NICOLE DEHÉ is a Professor of General Linguistics at the University of Konstanz.
The aim of this series is to provide a framework for original studies of English, both present-day and past. All books are based securely on empirical research, and represent theoretical and descriptive contributions to our knowledge of national and international varieties of English, both written and spoken. The series covers a broad range of topics and approaches, including syntax, phonology, grammar, vocabulary, discourse, pragmatics and sociolinguistics, and is aimed at an international readership.

Already published in this series:
