<i>Preface</i>	<i>page vii</i>
1 Origins, models and motivations	1
1.1 The spin glass problem	1
1.2 Random interactions, finite-dimensional models, mean-field models	2
1.3 Quenched measure and real replicas	6
1.4 Definition of a mean-field spin glass	9
1.5 Replica method for the SK model	13
1.6 The replica symmetric solution	16
1.7 The ultrametric replica symmetry breaking solution	19
2 Correlation inequalities	27
2.1 Spin functions	27
2.2 Ferromagnetism and the Griffiths–Kelly–Sherman inequalities	31
2.3 Spin glass correlation inequalities of type I	34
2.4 Extension to quantum case	35
2.5 Type II inequalities: results and counterexamples	37
2.6 Inequalities of types I and II on the Nishimori line	39
2.7 Some consequences of correlation inequalities	44
3 The infinite-volume limit	47
3.1 Introduction	47
3.2 Finite-dimensional models with Gaussian interactions	48
3.3 Pressure self-averaging	53
3.4 Finite-dimensional models with centered interactions	56
3.5 Quantum models	59
3.6 Extension to non-centered interactions	62
3.7 Independence of the pressure from boundary conditions	64

vi	<i>Contents</i>	
3.8	Surface pressure	66
3.9	Complete theory on the Nishimori line	73
3.10	Thermodynamical limit for mean-field models, REM and GREM	78
4	Exact results for mean-field models	84
4.1	Introduction to the Poisson point process	84
4.2	Poisson point process with exponential intensity	87
4.3	The Poisson–Dirichlet distribution	91
4.4	The random energy model	97
4.5	Upper bound for the REM pressure	98
4.6	Lower bound for the REM pressure	103
4.7	Statistics of energy levels for the REM	107
4.8	The generalized random energy model	108
4.9	Upper bound for the GREM pressure	109
4.10	Lower bound for the GREM pressure	112
4.11	The Aizenman–Sims–Starr extended variational principle	113
4.12	Guerra upper bound	119
4.13	Talagrand theorem and open problems	123
5	Spin glass identities	125
5.1	The stability method and the structural identities	125
5.2	Stochastic stability identities	130
5.3	Strong stochastic stability and marginal independence	134
5.4	Graph theoretical approach to Aizenman–Contucci identities	137
5.5	Identities from self-averaging	144
5.6	Identities on the Nishimori line	146
5.7	Interaction flip identities	151
6	Numerical simulations	164
6.1	Introduction	164
6.2	Simulations with real replicas	165
6.3	Overlap equivalence	168
6.4	Ultrametricity	176
6.5	Decay of correlations	183
6.6	Energy interfaces	192
	<i>References</i>	200
	<i>Index</i>	209
