Contents

Preface	page vii
List of frequently used symbols	x
1 Representations and modules	1
1.1 Basic concepts	1
1.2 Permutation representations and G -sets	23
1.3 Simple modules, the “Meataxe”	36
1.4 Structure of algebras	50
1.5 Semisimple rings and modules	55
1.6 Direct sums and idempotents	63
1.7 Blocks	79
1.8 Changing coefficients	83
2 Characters	87
2.1 Characters and block idempotents	87
2.2 Character values	101
2.3 Character degrees	109
2.4 The Dixon–Schneider algorithm	113
2.5 Application – generation of groups	121
2.6 Character tables	135
2.7 Products of characters	139
2.8 Generalized characters and lattices	149
2.9 Invariant bilinear forms and the Schur index	164
2.10 Computing character tables – an example	173
3 Groups and subgroups	179
3.1 Restriction and fusion	179
3.2 Induced modules and characters	182
3.3 Symmetric groups	199
3.4 Permutation characters	206
3.5 Tables of marks	210
3.6 Clifford theory	223
3.7 Projective representations	238

vi	<i>Contents</i>
3.8 Clifford matrices	259
3.9 M-groups	277
3.10 Brauer's induction theorem	281
4 Modular representations	289
4.1 p -modular systems	289
4.2 Brauer characters	301
4.3 p -projective characters	315
4.4 Characters in blocks	321
4.5 Basic sets	331
4.6 Defect groups	344
4.7 Brauer correspondence	350
4.8 Vertices	365
4.9 Green correspondence	378
4.10 Trivial source modules	386
4.11 Generalized decomposition numbers	396
4.12 Brauer's theory of blocks of defect one	407
4.13 Brauer characters of p -solvable groups	422
4.14 Some conjectures	426
References	443
Notation index	455
Subject index	457
