<i>List of Figures</i>	page ix	5 Hydraulic Engineering for Channel Stability and Flood Control: The Sequence of Geomorphic Adjustment	138
<i>List of Tables</i>	xv	5.1 Overview of Approaches to Channel Engineering	138
<i>Preface and Acknowledgments</i>	xvii	5.2 Influence of Sedimentology on Channel Engineering	143
1 Fluvial Lowlands and the Environment: Cause for Concern	1	5.3 Engineering for Flood Control and Navigation	144
1.1 Introduction and Scope of Work	1	5.4 Impacts of a Massive Flood Control System: Lower Mississippi Case Study	156
1.2 Extent and Scale of Fluvial Lowlands	2	5.5 Closure: Linkages between Channel Engineering and Floodplain Embankment	164
1.3 Human Impacts to Fluvial Lowlands	3	6 Dikes and Floodplains: Impacts of Flood Control on Lowland Rivers	166
1.4 A Tale of Two Rivers, and Beyond	5	6.1 Dikes and Floodplains	166
1.5 Outline and Narratives	6	6.2 Flood Control Systems and the Cycle of Dike Management	167
2 Rivers and Landscapes: A Drainage Basin Framework	9	6.3 Scale and Pattern of Floodplain Embankment	177
2.1 The Fluvial System: A Large River Perspective	9	6.4 Hydrography of Embanked Floodplains	181
2.2 Downstream Implications of Land Cover Change	13	6.5 Between the Dikes: Sedimentology of Embanked Floodplains	188
2.3 River Channel Patterns	19	6.6 Beyond the Dikes: Sand Boils, Dike Breach, and Sedimentation	193
2.4 Fluvial Adjustment to Environmental Disturbance	27	6.7 Embanked Floodplain Evolution and End-Member Regulated Rivers	201
3 Hydrologic and Geomorphic Processes in Fluvial Lowlands and Deltas	31	6.8 Closure: Toward Flood Basin Management	204
3.1 Context of Large Rivers	31	7 Flood Basins and Deltas: Subsidence, Sediment, and Storm Surge	205
3.2 Hydroclimatology of Large Rivers	32	7.1 A Challenging Environment	205
3.3 Channel Bank Erosion along Lowland Rivers	43	7.2 Flood Diversion Structures: Environmental Impacts and Stakeholder Controversy	206
3.4 Flooding across Fluvial Lowlands	48	7.3 Lower Lowlands: Human Activities, Sedimentology, and Subsidence	218
3.5 Lowland Floodplain Geomorphology	49	7.4 Avulsion and River Management	225
3.6 Neotectonic Influences on Lowland Rivers	62	7.5 Urban Flooding and Management Challenges	234
3.7 Deltaic Geomorphology	64		
3.8 Closure: Looking Forward with an Eye on the Past	78		
4 Dams, Rivers, and the Environment	80		
4.1 Hydraulic Infrastructure and Society	80		
4.2 Global Extent of Dams	82		
4.3 Environmental Impact of Dams and Reservoirs	89		
4.4 Dam Removal	115		
4.5 Managing Reservoir Deposits	130		

7.6 Hurricane Katrina Flooding of New Orleans: Cumulative Effects of River Basin Mismanagement	239	8.7 Managing Expectations: Integrated River Basin Management in Context	279
7.7 Closure: Reflection on Urban Flood Disasters	248	9 Lessons Learned: Future Management of Fluvial Lowlands	284
8 Toward Integrated Management of Lowland Rivers	249	9.1 Lowland River Management in Review	284
8.1 Need for a New Approach	249	9.2 Key Lessons Learned	284
8.2 <i>Real</i> Channel Improvement	251	9.3 Looking Forward: Concern and Optimism in Integrated Floodplain Management	291
8.3 Embanked Floodplain Measures	258	9.4 It's Not Too Late	297
8.4 Flood Basins and Deltas: Management Challenges	264	<i>Bibliography</i>	298
8.5 The Louisiana Experience: Subdeltas and Sediment Diversion	265	<i>Index</i>	326
8.6 Integrated Management: EU Water Framework Directive and Room for the River	275
