

THE ROMAN MONETARY SYSTEM

The Roman monetary system was highly complex. It involved official Roman coins in both silver and bronze – which some provinces produced while others imported them from mints in Rome and elsewhere – as well as, in the east, a range of civic coinages. This is a comprehensive study of the workings of the system in the Eastern provinces from the Augustan period to the third century AD, when the Roman empire suffered a monetary and economic crisis. The Eastern provinces exemplify the full complexity of the system, but comparisons are made with evidence from the Western provinces as well as with appropriate case studies from other historical times and places. The book will be essential for all Roman historians and numismatists and of interest to a broader range of historians of economics and finance.

CONSTANTINA KATSARI is Lecturer in Ancient History at the University of Leicester and a Fellow of the Royal Numismatic Society. Her publications include numerous articles and reviews on the Roman economy, comparative slavery and ancient identities, as well as three co-edited books: *Patterns in the Economy of Roman Asia Minor* (2005; co-edited with Stephen Mitchell); *Slave Systems: Ancient and Modern* (2008; co-edited with Enrico Dal Lago); and *From Captivity to Freedom: Themes in Ancient and Modern Slavery* (2008; co-edited with Enrico Dal Lago).

42 Silver coins from excavations in Patra, Corinth, Ephesus and Athens, and from the museum in Rhodes		193
43 Dura Europos: bronze coins, % per annum		217

Acknowledgements

Over the years I have had inspiration and help from many people within and outside academic circles. Some of them I still remember vividly while others faded with the passing of time. Among the ones that I would like to thank are the following. First and foremost, Kostas Buraselis who has remained a constant influence in my life as teacher, mentor, friend and guide. He is responsible for introducing me to the realm of history and supporting me in all endeavours for the past twenty years. From early on he instilled in me the passion we now share for the ancient world and he guided me unfailingly through the intricacies of the modern academic world. This book would never have been started, if I had never met him. Stephen Mitchell is the other force that supported me, since I first met him in 1999. When I was desperate that my career had finished before it even started, he was there to encourage me and to undertake the difficult role of a postdoc supervisor. In this capacity he read my PhD manuscript, commented on it and taught me everything I needed to know on the economy of Roman Asia Minor. My PhD supervisor, Michael Crawford, should also be mentioned as the person who has been patient enough to undertake the task of teaching me the working of the ancient economy. Even though our views differ substantially, I cannot deny that I was intrigued by the depth of his knowledge and the sharpness of his intellect. Andrew Burnett, my second supervisor, has also been exceedingly helpful in the completion of this book. I owe him many helpful comments on several drafts of the PhD manuscript and the facilitation of the use of the library and collections of the British Museum. Indirectly, he trained me in numismatics and he gave me an insight on the complicated methodology I was expected to follow. However, I owe the roots of my numismatic knowledge to Aikaterini Liampi. I attended her seminars in the National Foundation of Research in Athens for the best part of three years, while I was still an undergraduate student. During this time I was prepared for the difficult task that lay ahead. Ian Carradice and Richard Alston were the readers of my thesis. Their

comments helped me to draw a new strategy and turn towards a different direction. While I was completing my postdoc in Exeter I relied heavily on the advice of seasoned historians, such as Richard Seaford and David Braund. Both of them commented on my work and taught me how to combine the results of different disciplines. I also profited greatly from the academic environment of Leicester University. My colleagues at the School of Archaeology and Ancient History have supported me over the past five years not only with their helpful comments but also with their infinite patience and indulgence. Among them I would like to especially thank Neil Christie, Graham Shipley, David Mattingly, Colin Haselgrove and Lin Foxhall. Apart from the anonymous readers from Cambridge University Press who read the initial manuscript, I must pay my dues to Kevin Butcher. He read the book in detail and commented on the ideas and the source material. I relied heavily on his advice, although I have not always followed it, for which I hope he will forgive me. Other researchers whose work has influenced me over the years are Walter Scheidel, William Harris, Jean Andreau, David Hollander, Wim Jongman, Peter Temin, Kuroda Akinobu and Peter Ban. The debate has been intense and the disagreements many. Therefore, the results I hope will be equally interesting.

Since I started my PhD thesis I have received several grants from a number of research organisations in different countries. I would like to thank the Greek State Foundation of Scholarships for providing adequate funding for three and a half years that enabled me to finish my thesis. Later, the Foundation of the Hellenic World at Athens provided the funds to complete my first two-year postdoc in Exeter on the economy of Roman Asia Minor. In addition, the Humboldt Fellowship for Experienced Researchers allowed me to work in the DAI in Berlin and Athens for a year and a half. At the same time, I used a six-month Research Leave from the University of Leicester. Lesser grants were the Centenary Bursary for Research from the British School at Athens, the Martin Price Fund from the Royal Numismatic Society and a grant from the UK Numismatic Trust.
