asymmetric reactions (*cont.*)
 cycloaddition reactions 183, 202–11, 218, 226
 cyclopropanation 305, 307
 dihydroxylation 352–5
 ene reactions 233
 epoxidation 337–46
 epoxide-opening 109
 hydroboration 321
 hydrogenation 420
 organo-catalytic 45, 397
 oxidation of alcohols (kinetic resolution) 389
 palladium-catalyzed 96, 100
 radical reactions 281
 reduction of alkenes 420
 reduction of ketones 421, 452
 with chiral organolithium compounds 50
 with enzymes 355, 371, 401, 454
 avarone 373
 avenaciolide 216
 aza-Cope rearrangement 242
 aziridination 346
 azomethine ylides 228

Baeyer–Villiger reaction 398
 bafilomycin A₁ 385
 balanol 297
 Bamford–Stevens reaction 120, 300
 Barton decarboxylation 271
 Barton deoxygenation 271
 Barton reaction 276
 Baylis–Hillman reaction 31
 9-BBN 317
 Beckmann rearrangement 277
 benzene derivatives
 Birch reduction of 429
 hydrogenation of 414
 oxidation of 355, 371
 benzocyclobutenes 181, 260
 benzoin condensation 57
 benzoquinones 164, 181, 191, 208, 373
 benzylidene acetal, reductive cleavage 462
 benzynes 5, 166
 Bergman cycloaromatization reaction 147
 BINAP 96, 420
 BINOL 74, 208, 233
 biotransformations 355, 371, 401, 454
 Birch reduction 427, 430
 9-borabicyclo[3.3.1]nonane *see* 9-BBN
 borane 449
 boron enolates 30, 33, 42, 88, 250
 Bouveault–Blanc 425
 brefeldin 60, 253
 brevetoxin B 136
 brevicomin 120, 281, 314
 BRL-55834 343
 Bürgi–Dunitz angle 36

calicheamicins 94, 224, 251
 calyculin A 320
 camptothecin 291
 CAN 373

capnellene 236, 263
 carbenes 85, 299–311
 carbenoids 299
 carboalumination of alkynes 132
 carbocupration of alkynes 131
 carbolithiation 49
 carbonyl ylides 230
 Caro's acid 398
 carvone 188
 caryophyllene 212
 catecholborane 319
 CC-1065 292
 cedrene 295
 cerium trichloride 47, 438
 cerulenin 217
 cervinomycin A 262
 chelation control 64
 cheletropic reaction 272–304
 ChiraPHOS 420
 chloramine-T 347, 358
m-chloroperoxybenzoic acid *see* mCPBA
N-chlorosuccinimide 273, 383
 chromic acid 370, 371, 378, 392
 chromium trioxide 378
 Chugaev reaction 113
cis-principle, in Diels–Alder reaction 189
 Claisen condensation 11, 30
 Claisen rearrangement 244–52
 Clemmensen reduction 426
 cobalt-mediated cyclization 86
 Collins' reagent 376, 380
 combretastatin A-1 156
 compactin 178
 complex induced proximity effect 60
 conduramine 173
 conduritol A 200
 Conia reaction 237
 coniceine 152, 285
 conjugate addition 19–27, 40, 66, 76
 conessine 275
 Cope elimination 113
 Cope rearrangement 239–43
 Corey–Fuchs reaction 137
 Corey–Kim oxidation 383
 Corey–Winter reaction 124
 coriolin 87
 Cram's rule *see* Felkin–Anh model
 cross-metathesis 154
 cryptone 321
 cycloaddition reactions
 [2+2] 211
 [2+2+2] 89
 [4+2] *see* Sections 3.1, 3.3, 3.4
 Diels–Alder 159–211
 dipolar 222–31
 with allyl anions and cations 219–21
 cyclocitral 256
 cycloeudesmol 308
 cyclopropanes
 from carbenes 304
 from sulfoxonium ylides 54

- cyclotrimerization 89
 cytovaricin 102

preparation by allylic oxidation 374, 376
reduction to alkenes 433, 437, 438, 445, 446, 448, 458
reduction to the saturated carbonyl compound 409, 410, 418, 420, 427, 461
Upjohn dihydroxylation 350
- valerane 77
vanadium acetylacetonate 334
vancomycin 369
vernolepin 279
vitamin D 173, 179
- Wacker oxidation reaction 365
Wadsworth–Emmons reaction 138
- Weinreb amide 65
widdrol 249
Wilkinson's catalyst 319, 417, 460
Wittig reaction 132–41
Wittig rearrangement 253
Wolff–Kishner reduction 457
Wolff rearrangement 309
Woodward–Hoffmann rules 160, 192, 219, 259
Woodward–Prévost reaction 357
- xanthates, in pyrolysis to give alkenes 111, 113
- ylides
phosponium 133
sulfonium 53, 310
- Zaitsev elimination 106
zampanolide 157
zearalenone 90
Zimmerman–Traxler model 32, 41
zinc, as reducing agent 423, 426
