Contents

Preface vii
Acknowledgments ix
Foreword by William A. Reiners and Pedro A. Sánchez xii

Part I
Soil and sustainability 1
1 Concerns about soil in the modern world 3
2 Managing soils for productivity and environmental quality 17
3 Biogeochemical sciences in support of soil management 24
4 The science of estimating soil change 31
5 Soil change over millennia, centuries, and decades 40
6 The Calhoun forest: a window to understanding soil change 51

Part II
Soil change over time scales of millennia:
long-term pedogenesis 67
7 Soil development from the Devonian to Mendocino and Hawaii 69
8 Genesis of advanced weathering-stage soils at the Calhoun ecosystem 77
9 The Calhoun soil profile 81
10 The forest's biogeochemical attack on soil minerals 90

Part III
Soil change over time scales of centuries:
conversion of primary forests to agricultural fields 105
11 Agricultural beginnings: Native American cultivation 107
12 Soil biogeochemistry in cotton fields of the Old South 116
13 Agricultural legacies in old-field soils 134
### Table of Contents

**Part IV**

**Soil change over time scales of decades:**
- conversion of agricultural fields to secondary forests
  - 14 The birth of a new forest
  - 15 Accumulation and rapid turnover of soil carbon in a re-establishing forest
  - 16 Satisfying a forest's four-decade nitrogen demand
  - 17 Soil re-acidification and circulation of nutrient cations
  - 18 Changes in soil-phosphorus fractions in a re-establishing forest

**Part V**

**Soil change and the future**
- 19 The case for long-term soil-ecosystem experiments

**Epilogue**
- 207

**Recommended readings**
- 209

**Appendices**
- I Carbonic acid weathering reactions
  - 220
- II Simulation of bomb-produced $^{14}$C in the forest floor at the Calhoun Experimental Forest, SC
  - 221
- III Sources of variation in the Calhoun Experimental Forest's main analysis of variance (ANOVA)
  - 223
- IV Total elemental concentrations for soils from the Calhoun Experimental Forest, SC
  - 224

**References**
- 226

**Index**
- 246
