978-0-521-77598-4 - Geometric Approaches to Differential Equations

Edited by Peter J. Vassiliou and Ian G. Lisle

Table of Contents

[More information](#)**Contents**

List of Contributors	vii
Preface	ix
Introduction: Geometric Approaches to Differential Equations <i>Peter J. Vassiliou</i>	1
Bäcklund and his Works: Applications in Soliton Theory <i>Colin Rogers, Wolfgang K. Schief and Mark E. Johnston</i>	16
Recent Developments in Integrable Curve Dynamics <i>Annalisa Calini</i>	56
An Elementary Introduction to Exterior Differential Systems <i>Niky Kamran</i>	100
Cartan Structure of Infinite Lie Pseudogroups <i>Ian G. Lisle and Gregory J. Reid</i>	116
Cartan's Method of Equivalence <i>David H. Hartley</i>	146
The Inverse Problem in the Calculus of Variations and its Ramifications <i>Geoff E. Prince</i>	171
Twistor Theory <i>Michael K. Murray</i>	201
Index	224
