LONDON MATHEMATICAL SOCIETY LECTURE NOTE SERIES

Managing Editor: Professor N.J. Hitchin, Mathematical Institute,
University of Oxford, 24–29 St Giles, Oxford OX1 3LB, United Kingdom

The titles below are available from booksellers, or, in case of difficulty, from Cambridge University Press.

- 46 *p*-adic Analysis: a short course on recent work, N. KOBLITZ
 59 Applicable differential geometry, M. CRAMPIN & F.A.E. PIRANI
 66 Several complex variables and complex manifolds II, M.J. FIELD
 86 Topological topics, I.M. JAMES (ed)
 88 FPF ring theory, C. FAITH & S. PAGE
 90 Polytopes and symmetry, S.A. ROBERTSON
 93 Aspects of topology, I.M. JAMES & E.H. KRONHEIMER (eds)
 96 Diophantine equations over function fields, R.C. MASON
 97 Varieties of constructive mathematics, D.S. BRIDGES & F. RICHMAN
 99 Methods of differential geometry in algebraic topology, M. KAROUBI & C. LERUSTE
 100 Stopping time techniques for analysts and probabilists, L. EGGHE
 105 A local spectral theory for closed operators, I. ERDELYI & WANG SHENGWANG
 107 Compactification of Siegel moduli schemes, C.-L. CHAI
 109 Diophantine analysis, J. LOXTON & A. VAN DER POORTEN (eds)
 113 Lectures on the asymptotic theory of ideals, D. REES
 114 Lectures on Bochner-Riesz means, K.M. DAVIS & Y.-C. CHANG
 116 Representations of algebras, P.J. WEBB (ed)
 119 Triangulated categories in the representation theory of finite-dimensional algebras, D. HAPPEL
 121 Proceedings of Groups - St Andrews 1985, E. ROBERTSON & C. CAMPBELL (eds)
 128 Descriptive set theory and the structure of sets of uniqueness, A.S. KECHRIS & A. LOUVEAU
 130 Model theory and modules, M. PREST
 131 Algebraic, extremal & metric combinatorics, M.-M. DEZA, P. FRANKL & I.G. ROSENBERG (eds)
 138 Analysis at Urbana, II, E. BERKSON, T. PECK, & J. UHL (eds)
 139 Advances in homotopy theory, S. SALAMON, B. STEER & W. SUTHERLAND (eds)
 140 Geometric aspects of Banach spaces, E.M. PEINADOR & A. RODES (eds)
 141 Surveys in combinatorics 1989, J. SIEMONS (ed)
 144 Introduction to uniform spaces, I.M. JAMES
 146 Cohen-Macaulay modules over Cohen-Macaulay rings, Y. YOSHINO
 148 Helices and vector bundles, A.N. RUDAKOV *et al*
 149 Solitons, nonlinear evolution equations and inverse scattering, M. ABLOWITZ & P. CLARKSON
 150 Geometry of low-dimensional manifolds 1, S. DONALDSON & C.B. THOMAS (eds)
 151 Geometry of low-dimensional manifolds 2, S. DONALDSON & C.B. THOMAS (eds)
 152 Oligomorphic permutation groups, P. CAMERON
 153 L-functions and arithmetic, J. COATES & M.J. TAYLOR (eds)
 155 Classification theories of polarized varieties, TAKAO FUJITA
 158 Geometry of Banach spaces, P.F.X. MÜLLER & W. SCHACHERMAYER (eds)
 159 Groups St Andrews 1989 volume 1, C.M. CAMPBELL & E.F. ROBERTSON (eds)
 160 Groups St Andrews 1989 volume 2, C.M. CAMPBELL & E.F. ROBERTSON (eds)
 161 Lectures on block theory, BURKHARD KÜLSHAMMER
 163 Topics in varieties of group representations, S.M. VOVSI
 164 Quasi-symmetric designs, M.S. SHRIKANDÉ & S.S. SANE
 166 Surveys in combinatorics, 1991, A.D. KEEDWELL (ed)
 168 Representations of algebras, H. TACHIKAWA & S. BRENNER (eds)
 169 Boolean function complexity, M.S. PATERSON (ed)
 170 Manifolds with singularities and the Adams-Novikov spectral sequence, B. BOTVINNIK
 171 Squares, A.R. RAJWADE
 172 Algebraic varieties, GEORGE R. KEMPF
 173 Discrete groups and geometry, W.J. HARVEY & C. MACLACHLAN (eds)
 174 Lectures on mechanics, J.E. MARSDEN
 175 Adams memorial symposium on algebraic topology 1, N. RAY & G. WALKER (eds)
 176 Adams memorial symposium on algebraic topology 2, N. RAY & G. WALKER (eds)
 177 Applications of categories in computer science, M. FOURMAN, P. JOHNSTONE & A. PITTS (eds)
 178 Lower K- and L-theory, A. RANICKI
 179 Complex projective geometry, G. ELLINGSRUD *et al*
 180 Lectures on ergodic theory and Pesin theory on compact manifolds, M. POLLICOTT
 181 Geometric group theory I, G.A. NIBLO & M.A. ROLLER (eds)
 182 Geometric group theory II, G.A. NIBLO & M.A. ROLLER (eds)
 183 Shintani zeta functions, A. YUKIE
 184 Arithmetical functions, W. SCHWARZ & J. SPILKER
 185 Representations of solvable groups, O. MANZ & T.R. WOLF
 186 Complexity: knots, colourings and counting, D.J.A. WELSH
 187 Surveys in combinatorics, 1993, K. WALKER (ed)
 188 Local analysis for the odd order theorem, H. BENDER & G. GLAUBERMAN
 189 Locally presentable and accessible categories, J. ADAMEK & J. ROSICKY
 190 Polynomial invariants of finite groups, D.J. BENSON
 191 Finite geometry and combinatorics, F. DE CLERCK *et al*
 192 Symplectic geometry, D. SALAMON (ed)
 194 Independent random variables and rearrangement invariant spaces, M. BRAVERMAN

Human thought, flying on the trapezes of the star-filled universe, with mathematics stretched beneath, was like an acrobat working with a net but suddenly noticing that in reality there is no net, and Martin envied those who attained that vertigo and, with a new calculation, overcame their fear.

V. V. Nabokov, Glory.

Человеческая мысль, летающая на трапециях звездной вселенной, с протянутой под ней математикой, похожа была на акробата, работающего с сеткой, но вдруг замечающего, что сетки, в сущности, нет, - и Мартын завидовал тем, кто доходит до этого головокружения и новой выкладкой преодолевает страх.

В. В. Набоков, Подвиг.

Preface

Singular perturbations of Schrödinger type operators are of interest in mathematics, e.g. to study spectral phenomena, and in applications of mathematics in various sciences, e.g. in physics, chemistry, biology, and in technology. They also often lead to models in quantum theory which are solvable in the sense that the spectral characteristics (eigenvalues, eigenfunctions, and scattering matrix) can be computed. Such models then allow us to grasp the essential features of interesting and complicated phenomena and serve as an orientation in handling more realistic situations.

In the last ten years two books have appeared on solvable models in quantum theory built using special singular perturbations of Schrödinger operators. The book by S. Albeverio, F. Gesztesy, R. Høegh-Krohn and H. Holden [39] describes the models in rigorous mathematical terms. It gives a detailed analysis of perturbations of the Laplacian in \mathbf{R}^d , $d = 1, 2, 3$, by potentials with support on a discrete finite or infinite set of point sources (chosen in a deterministic, respectively, stochastic manner). Physically these operators describe the motion of a quantum mechanical particle moving under the action of a potential supported, e.g., by the points of a crystal lattice or a random solid. Such systems and models are also described in physical terms in the book by Yu.N.Demkov and V.N.Ostrovsky [255], which also contains a description of applications in other areas such as in optics and electromagnetism. Let us also remark that a translation of the book [39] in Russian has been published with additional comments and literature [40]. Since the appearance of [39, 40, 255] several important new developments have taken place. It is the main aim of the present book to present some of these new developments in a unified formalism which also puts some of the basic results of the preceding books into a new light. The new developments concern in particular a systematic study of finite rank perturbations of (self-adjoint) operators (in particular differential operators), of generalized (singular) perturbations, of the corresponding scattering theory as well as infinite rank perturbations and multiple particles (many-body) problems in

viii

quantum theory. We also present the theory of point interaction Hamiltonians, as a particular case of a general theory of singular perturbations of differential operators. This theory has received steadily increasing attention over the years also for its many applications in physics (solid state physics, nuclear physics), electromagnetism (antennas), and technology (metallurgy, nanophysics).

We hope this monograph can serve as a basis for orientation in a rapidly developing area of analysis, mathematical physics and their applications.

Acknowledgments

Work on this monograph has ranged over several years and we are grateful to many persons and institutions who helped us to accomplish it.

We enjoyed the collaboration with many mathematicians and physicists concerning topics discussed in this book. First of all we acknowledge our great indebtedness to the late Raphael Høegh-Krohn, whose original inspiration was essential to our whole project. Special thanks also go to Boris Pavlov and Ludwig Faddeev, who supported the project at all stages. We would also like to thank

J. Boman, J.B. Brasche, Z. Brzeźniak, Ph. Clément,
L. Dąbrowski, G.F. Dell'Antonio, Yu.N. Demkov, V.V. Evstratov,
P. Exner, S.M. Fei, J.E. Fenstad, R. Figari,
V.A. Geyler, F. Gesztesy, F. Haake, S. Hassi,
H. Holden, J. Janas, W. Karwowski, V. Koshmanenko,
Yu.A. Kuperin, S.T. Kuroda, S. Lakaev, T. Lindstrøm,
K.A. Makarov, Yu.B. Melnikov, R.A. Minlos, A. Motovilov,
S.N. Naboko, H. Neidhardt, E. Nelson, L.P. Nizhnik,
P. Šeba, Yu.G. Shondin, H. de Snoo, A. Teta, and K. Watanabe
for stimulating discussions.

We are grateful for support to the following persons and institutions:

G.F. Dell'Antonio, SISSA, Trieste;
I. Prigogine, Solvay Institute and Univ. Libre de Brussel;
Mathematical Dept., Ruhr Univ., Bochum;
Alexander von Humboldt Foundation, Bonn;
Mathematical Dept., Bonn Univ.;
Dept. of Mathematics, Luleå Univ.;
Swedish Institute, Stockholm;
Dept. Mathematics, Stockholm Univ.;
Dept. of Mathematical and Computational Physics, St. Petersburg Univ.;
Banach Center, Warszawa, Poland.

Material included in the monograph has been discussed at several international conferences and symposia held in different scientific centres all over the world. In particular it was presented in a series of lectures given by the second named author at the international workshops 'Spectral analysis of some second differential and difference operators' held at the Banach Center, Warsaw, in August-September 1997 and 1998 (organized by J. Janas and S. Naboko). We would like to thank the Banach Center for their hospitality. Another course of lectures on the material included was given in January 1996 by the same author at the Department of Mathematical and Computational Physics of St. Petersburg University.

Other presentations of material in this monograph have been given at the 'SISSA Workshops on singular Schrödinger operators' in September 1994 and 'Semiclassical Limit of Quantum Mechanics and Non-linear Schrödinger equation' in July 1998 (organized by G.F. Dell'Antonio, R. Figari and A. Teta), the Oberwolfach meeting on 'Spectral Theory' in July 1998 (organized by M. Van den Bergh, J.A. Van Casteren, M. Demuth) and on the Bad Herrenalb Conference 'Evolution equations and their applications in physical and life sciences', in September 1998 (organized by G. Lumer and L. Weis).

Contents

1	Rank one perturbations	9
1.1	Bounded perturbations	9
1.1.1	Resolvent analysis	9
1.1.2	Infinite coupling	14
1.2	Krein's formula	15
1.2.1	Bounded and singular perturbations	15
1.2.2	Scale of Hilbert spaces	17
1.2.3	Form bounded and form unbounded perturbations	19
1.2.4	Rank one perturbations and the extension theory for symmetric operators	21
1.2.5	The extension theory and Krein's formula	23
1.2.6	Q -function for rank one perturbations	28
1.3	Singular rank one perturbations	30
1.3.1	Form bounded rank one singular perturbations	30
1.3.2	Family of rank one form unbounded perturbations	32
1.3.3	Singular rank one form unbounded perturbations of homogeneous operators	35
1.3.4	Resolvent formulas	38
1.4	Approximations of singular rank one perturbations	41
1.4.1	Norm convergence of the approximations	41
1.4.2	Strong resolvent convergence of the approximations	46
1.5	Differential operators with rank one singular perturbations	49
1.5.1	Point interactions in dimension three	49
1.5.2	Perturbations of the first derivative operator	58
1.5.3	Dirac operator with a pseudopotential	60

2	Generalized rank one perturbations	63
2.1	Krein's formula for the generalized resolvents	63
2.1.1	Generalized self-adjoint extensions and generalized resolvents	63
2.1.2	Generalized rank one perturbations	64
2.2	Model generalized perturbations	69
2.2.1	Introduction	69
2.2.2	Model perturbations I: densely defined restricted oper- ators	70
2.2.3	Model perturbations II: non-densely defined construction	81
2.2.4	Generalized resolvents and model generalized perturbations	90
2.3	Generalized point interactions	92
2.3.1	Generalized point interaction in dimension three	92
2.3.2	Generalized delta interaction in dimension one	99
3	Finite rank perturbations and distribution theory	111
3.1	Finite rank perturbations	111
3.1.1	Preliminaries	111
3.1.2	Form bounded finite rank perturbations	116
3.1.3	Form unbounded finite rank perturbations	120
3.1.4	Generalized finite rank perturbations	125
3.2	Point interactions for differential operators and distribution theory	130
3.2.1	Point interactions for differential operators as finite rank perturbations	130
3.2.2	Distribution theory for discontinuous test functions . .	134
3.2.3	Differential operator of order n in one dimension	140
3.2.4	Second order differential operator in one dimension	142
4	Scattering theory for finite rank perturbations	159
4.1	Scattering theory for rank one perturbations	159
4.1.1	Rank one perturbations and operators with a simple spectrum	160
4.1.2	Invariance of the absolutely continuous spectrum	162
4.1.3	Wave operators and scattering operator for rank one perturbations	169

CONTENTS

xiii

4.2	Scattering for self-adjoint extensions	175
4.2.1	Wave operators for self-adjoint extensions	175
4.2.2	Scattering operator for self-adjoint extensions	177
4.2.3	Scattering matrix for self-adjoint extensions	184
4.3	Scattering theory for finite rank perturbations	188
4.3.1	Scattering theory for finite rank perturbations	188
4.3.2	Scattering matrix for rank two perturbations	190
4.3.3	Scattering matrix for generalized perturbations	191
5	Krein's formula for infinite deficiency indices and two-body problems	195
5.1	Infinite rank perturbations	195
5.1.1	Krein's formula for infinite deficiency indices	195
5.1.2	Generalized perturbations of infinite rank	198
5.1.3	Resolvent formula for functionals	202
5.2	Two-body problems	205
5.2.1	Two-body operator with interaction of rank one	205
5.2.2	Two-body operator with generalized interaction of rank one	219
6	Few-body problems	227
6.1	Few-body formula I: self-adjoint extensions	227
6.1.1	Tensor structure of the few-body Hilbert space	227
6.1.2	Few-body operator with \mathcal{H}_{-1} interaction	232
6.1.3	Few-body operator with \mathcal{H}_{-2} interaction	238
6.1.4	Self-adjointness of the few-body operator with strongly separable interactions	244
6.1.5	Few-body operator with delta interaction.	247
6.2	Few-body formula II: generalized self-adjoint extensions	248
6.2.1	Generalized unperturbed operator	248
6.2.2	Inner-cluster generalized interaction	250
6.2.3	Few-body operator with generalized interaction	256
6.2.4	Self-adjointness of the few-body operator with infinitely separable generalized interactions	265
7	Three-body models in one dimension	273
7.1	Schrödinger operators constructed using self-adjoint extensions	273
7.1.1	Tensor structure of the Hilbert space	273
7.1.2	Definition of the Schrödinger operator as a self-adjoint operator.	274
7.1.3	Spectrum, eigenfunctions and Bethe Ansatz	277

7.2	Operators with generalized delta interactions	281
7.2.1	Two-body generalized delta interactions	281
7.2.2	Three-body Schrödinger operator with two-body gen- eralized delta interactions	283
7.2.3	Symmetry group	285
7.2.4	Outgoing wave and Sommerfeld–Maluzhinetz transformation	293
7.2.5	Solution of the functional equations	298
7.2.6	Properties of the outgoing wave	305
7.2.7	Spectrum and scattering matrix	315
7.2.8	Calculation of the scattering matrix	318
A	Historical remarks.	327
A.1	Extension theory for symmetric operators	327
A.1.1	Extension theory and Nevanlinna R -functions	327
A.1.2	Symplectic structure and von Neumann construction	330
A.2	Finite rank perturbations	332
A.2.1	Definition of singular finite rank perturbations	332
A.2.2	Generalized singular perturbations	334
A.2.3	Singular perturbations defined by forms	336
A.3	Point interactions	337
A.3.1	Definition of the point interactions in $\mathbf{R}^1, \mathbf{R}^2$ and \mathbf{R}^3	337
A.3.2	Approximations of point interactions	340
A.3.3	Point interactions and inverse problems	341
A.4	Few-body problems	341
A.4.1	Three-body problems in \mathbf{R}^3 and \mathbf{R}^2	341
A.4.2	Few-body problems in \mathbf{R}^1	344
A.5	Recent developments	346
A.5.1	Sphere interactions	346
A.5.2	Interactions on low dimensional manifolds	346
A.5.3	Relativistic point interactions	347
A.5.4	Self-adjoint operators on graphs	348
A.5.5	Acoustic problems	349
A.5.6	Magnetic field, Aharonov–Bohm effect and anyons	349
A.5.7	Time dependent interactions	350
A.5.8	Solid state	350
A.5.9	Further developments	351
	Bibliography	353
	Index	427
