| <i>Preface</i>   |             | <i>ix</i>  |
| <b>1 Introduction and summary</b>  |             | <b>1</b>   |
| <b>2 PDE systems, pfaffian systems and vector field systems</b>  |             | <b>7</b>   |
| 2.1 ODE systems, vector fields and 1-parameter groups  |             | 7          |
| 2.2 First order PDE systems in one dependent variable,<br>pfaffian equations and contact transformations                                   |             | 16         |
| 2.3 Jet bundles and contact pfaffian systems   |             | 19         |
| 2.4 The theorem of Frobenius   |             | 24         |
| 2.5 Mayer's blowing-up method for proving the Frobenius<br>theorem   |             | 30         |
| <b>3 Cartan's local existence theorem</b>  |             | <b>35</b>  |
| 3.1 Involutions and characters   |             | 38         |
| 3.2 From involutions to complete systems   |             | 43         |
| 3.3 How general is the general solution?   |             | 55         |
| 3.4 Cauchy characteristics   |             | 60         |
| 3.5 Maximal involutions and integrable vector field systems  |             | 67         |
| <b>4 Involutivity and the prolongation theorem</b>   |             | <b>79</b>  |
| 4.1 Independence condition and involutivity  |             | 81         |
| 4.2 Prolongations  |             | 94         |
| 4.3 Explanation of the prolongation theorem  |             | 107        |
| <b>5 Drach's classification, second order PDEs in one dependent<br/>variable, and Monge characteristics</b>                                |             | <b>114</b> |
| 5.1 The classification of Drach  |             | 115        |
| 5.2 Second order PDEs in one unknown and their<br>singular vector fields   |             | 117        |
| 5.3 Monge characteristic subsystems  |             | 124        |
| <b>6 Integration of vector field systems <math>\mathcal{V}</math> satisfying<br/><math>\dim \mathcal{V}' = \dim \mathcal{V} + 1</math></b> |             | <b>126</b> |

|           |   |            |
|-----------|---|------------|
| vi        | <i>Contents</i>   |            |
|           | 6.1 Maximal involutions   | 126        |
|           | 6.2 Complete subsystems   | 131        |
|           | 6.3 The generalized contact bracket   | 135        |
|           | 6.4 Reduction to a canonical form and systems of contact<br>coordinates                     | 139        |
|           | 6.5 How to find all maximal complete subsystems of $\mathcal{V}$                            | 146        |
|           | 6.6 Contact transformations and Lie pseudogroups  | 152        |
|           | 6.7 Explicitly integrable systems   | 157        |
| <b>7</b>  | <b>Higher order contact transformations</b>   | <b>163</b> |
|           | 7.1 Lie's rectification theorem for first order PDE systems<br>in one dependent variable    | 164        |
|           | 7.2 Bäcklund's theorems   | 168        |
|           | 7.3 Contact prolongations of local diffeomorphisms  | 173        |
| <b>8</b>  | <b>Local Lie groups</b>   | <b>175</b> |
|           | 8.1 The parameter group and its structure constants   | 175        |
|           | 8.2 The left- and right-invariant parameter groups  | 179        |
|           | 8.3 Left- and right-invariant vector fields and their dual<br>Maurer–Cartan forms           | 182        |
|           | 8.4 One-parameter subgroups and the exponential<br>mapping                                  | 189        |
|           | 8.5 The first and second fundamental theorems   | 201        |
|           | 8.6 The third fundamental theorem   | 207        |
|           | 8.7 Local transformation groups   | 213        |
| <b>9</b>  | <b>Structural classification of 3-dimensional Lie algebras over the<br/>complex numbers</b> | <b>221</b> |
|           | 9.1 The classification  | 224        |
|           | 9.2 Realizations as transformation groups   | 229        |
| <b>10</b> | <b>Lie equations and Lie vector field systems</b>   | <b>235</b> |
|           | 10.1 Characterization of ODE systems with fundamental<br>solutions                          | 242        |
|           | 10.2 Lie vector field systems associated to Lie groups                                      | 252        |
| <b>11</b> | <b>Second order PDEs in one dependent and two independent<br/>variables</b>                 | <b>270</b> |
|           | 11.1 Second order PDEs and associated vector field<br>systems                               | 270        |
|           | 11.2 Monge systems  | 277        |
|           | 11.3 A connection with line geometry  | 282        |
|           | 11.4 Darboux's method for hyperbolic PDEs   | 289        |
| <b>12</b> | <b>Hyperbolic PDEs with Monge systems admitting two or three<br/>first integrals</b>        | <b>296</b> |

| <i>Contents</i> |   | vii        |
|-----------------|---|------------|
| 12.1            | First integrals of the first order  | 297        |
| 12.2            | Two first integrals for each Monge system   | 304        |
| 12.3            | How to find integral manifolds  | 312        |
| 12.4            | Integrable systems  | 317        |
| 12.5            | Two first integrals for one Monge system and three for the other                              | 327        |
| 12.6            | Three first integrals for each Monge system   | 341        |
| <b>13</b>       | <b>Classification of hyperbolic Goursat equations</b>   | <b>346</b> |
| 13.1            | Goursat equations which are associated to 2-dimensional Lie groups                            | 350        |
| 13.2            | Goursat equations associated to the projective group in one variable                          | 356        |
| <b>14</b>       | <b>Cartan's theory of Lie pseudogroups</b>  | <b>368</b> |
| 14.1            | The first fundamental theorem   | 372        |
| 14.2            | The second fundamental theorem  | 383        |
| 14.3            | The third fundamental theorem   | 391        |
| 14.4            | The stability group and its Lie algebra   | 395        |
| 14.5            | Getting rid of inessential invariants   | 404        |
| 14.6            | Normal prolongations  | 409        |
| <b>15</b>       | <b>The equivalence problem</b>  | <b>421</b> |
| 15.1            | The simplest case: $e$ -structures  | 426        |
| 15.2            | The general equivalence problem of Cartan   | 429        |
| 15.3            | Examples  | 433        |
| <b>16</b>       | <b>Parabolic PDEs and associated PDE systems</b>  | <b>442</b> |
| 16.1            | Parabolic PDEs for which the Monge system admits at least two first integrals                 | 444        |
| 16.2            | Pfaffian systems of three and two dimensions in five variables                                | 458        |
| 16.3            | Systems of two PDEs having a Cauchy characteristic vector field                               | 464        |
| <b>17</b>       | <b>The equivalence problem for general 3-dimensional pfaffian systems in five variables</b>   | <b>471</b> |
| 17.1            | The naturally associated homogeneous polynomial $\mathcal{F}$ of degree four in two variables | 474        |
| 17.2            | $\mathcal{F}$ has four simple roots   | 484        |
| 17.3            | $\mathcal{F}$ vanishes identically  | 487        |
| 17.4            | $\mathcal{F}$ has a root of multiplicity 4  | 492        |
| 17.5            | $\mathcal{F}$ has one triple and one simple root  | 499        |
| 17.6            | $\mathcal{F}$ has two double roots  | 500        |

|           |  |     |
|-----------|--|-----|
| <b>18</b> | <b>Involutive second order PDE systems in one dependent and three independent variables, solved by the method of Monge</b> | 505 |
| 18.1      | Preliminaries  | 510 |
| 18.2      | Structural classification  | 515 |
| 18.3      | A single PDE   | 527 |
| 18.4      | Two PDEs   | 536 |
| 18.5      | Three PDEs   | 549 |
| 18.6      | Four and five PDEs   | 557 |
| 18.7      | How to go further?   | 560 |
|           | <i>Bibliography</i>  | 565 |
