Preface	viii
Chapter 1. Preliminary Concepts	1
1.1. Elements of stability theory	1
1.1.1. Strongly continuous semigroups and stability of sets	1
1.1.2. Existence of a global attractor	5
1.1.3. The role of Lyapunov function	11
1.1.4. Compact semigroups	12
1.2. Inequalities. Elliptic operators	16
1.2.1. Elementary inequalities	16
1.2.2. Embedding theorems	23
1.2.3. Nirenberg-Gagliardo type inequalities	25
1.2.4. Properties of uniformly strongly elliptic operators	27
1.3. Sectorial operators	32
1.3.1. Two basic estimates	35
1.3.2. Examples of sectorial operators	37
1.3.3. Fractional powers of sectorial operators	42
Chapter 2. The abstract Cauchy problem	54
2.1. Evolutionary equation with sectorial operator	54
2.2. Variation of constants formula	57
2.3. Local X^α solutions	62
Chapter 3. Semigroups of global solutions	70
3.1. Generation of nonlinear semigroups	71
3.1.1. Semigroups on X^α	72
3.1.2. Metric phase spaces	74

vi	CONTENTS	
3.2. Smoothing properties of the semigroup		76
3.3. Compactness results		80
Chapter 4. Construction of the global attractor		83
4.1. Dissipativeness of $\{T(t)\}$		83
4.2. Existence of a global attractor - abstract setting		86
4.3. Global solvability and attractors in X^α scales		88
Chapter 5. Application of abstract results to parabolic equations		90
5.1. Formulation of the problem		90
5.2. Global solutions via partial information		94
5.3. Existence of a global attractor		98
Chapter 6. Examples of global attractors in parabolic problems		103
6.1. Introductory example		103
6.2. Single second order dissipative equation		105
6.3. The method of invariant regions		109
6.3.1. The Fitzhugh-Nagumo Equation		116
6.3.2. Superconductivity of liquids		116
6.4. The Cahn-Hilliard pattern formation model		117
6.5. Burgers equation		126
6.6. Navier-Stokes equations in low dimension ($n \leq 2$)		128
6.7. Cauchy problems in the half-space $R^+ \times R^n$		132
Chapter 7. Backward uniqueness and regularity of solutions		139
7.1. Invertible processes		139
7.2. $X^{s+\alpha}$ solutions; $s \geq 0, \alpha \in [0, 1)$		147
Chapter 8. Extensions		162
8.1. Non-Lipschitz nonlinearities		162
8.2. Application of the principle of linearized stability		165
8.3. The n-dimensional Navier-Stokes system		169
8.4. Parabolic problems in Hölder spaces		177
8.5. Dissipativeness in Hölder spaces		183

CONTENTS

vii

8.6. Equations with monotone operators	194
8.6.1. Formulation of the problem	194
8.6.2. Complete continuity and dissipativeness in H	196
8.6.3. Degenerate parabolic equations	200
Chapter 9. Appendix	203
9.1. Notation, definitions and conventions	203
9.2. Abstract version of the maximum principle	211
9.3. $L^\infty(\Omega)$ estimate for second order problems	213
9.4. Comparison of X^α solution with other types of solutions	217
9.5. Final remarks	222
Bibliography	225
Index	234
