

FIGURE INDEX

<i>Figure no.</i>	<i>Page</i>
1.1 Exploration limits during the last millennium	2
2.1 Relative numbers of light atomic nuclei produced during the Big Bang	23
2.2 Frequency distribution of the intensity of the cosmic afterglow	25
2.3 A picture of the deep sky at millimeter wavelengths	26
2.4 Distribution on the sky of 1 million galaxies	29
2.5 Distribution in depth of the galaxies	31
2.6 A globular cluster of stars in the constellation Hercules	36
2.7 Accretion remnant of a giant black hole	40
3.1 Theoretical Hertzsprung–Russell diagram of stellar evolution	47
3.2 The remnant of the supernova explosion of AD 1054 (Crab Nebula)	55
3.3 Planetary nebula in Lyra, with its white dwarf	57
3.4 Evolution of a close binary star and formation of a nova	59
3.5 Mass fraction of stellar interiors ejected into space	61
4.1 Number of protons and of neutrons present in 290 atomic nuclei	73
4.2 Cosmic abundance of the elements, classified by their origins	74
4.3 Giant molecular cloud in Orion, with stars in formation	82
4.4 Cross-section in the accretion disk of the Solar System	85
4.5 Temperature distribution at dust sedimentation in accretion disk	89
4.6 Nucleus of Halley’s comet, an example of a snowy planetesimal	92
4.7 Dust ring surrounding the star Beta Pictoris	94
4.8 The final collisions of the Earth and of Mercury	109
5.1 The lunar craters as fossil evidence of the origin of our biosphere	118
5.2 Cumulative flux of lunar impacts compared with comet impact rate	120
5.3 Fossil imprints of the oldest known bacteria	125
5.4 The DNA double helix and its duplication mechanism	130
5.5 Assembly mechanism of amino acids into a protein	131
5.6 Chemical structure of the DNA double helix	132
5.7 Growth in the genome complexity with its emergence date	137
5.8 Phylogenetic tree of the evolution of cytochrome c	141
5.9 Structure of the ribosome in the bacterium <i>E. coli</i>	143
5.10 A universal tree for the evolution of living species	144
5.11 Chemical pathways leading to the emergence of life	147
6.1 Comparison of prokaryotic eukaryotic cells	164
6.2 Amount of oxygen in the air, during the last 4 billion years	170
6.3 Stromatolites, colonies of cyanobacteria still extant today	172
6.4 A few skeletons reconstructed from dinosaur fossils	182
6.5 Events in the Earth’s history that may have caused extinctions	186
6.6 The Cretaceous/Tertiary (K/T) separation layer in Italy	188
6.7 The 300 km impact crater in Yucatán (extinction of the dinosaurs)	190

FIGURE INDEX

7.1	Evolution of the human brain from fossil skulls	199
8.1	The famous ‘canals’ of planet Mars	211
8.2	Ancient dried river beds on planet Mars	216
8.3	One of the fossil bacteria found inside a Martian meteorite	220
8.4	Infrared spectra of Venus, the Earth and Mars	237
9.1	A perspective view of the emergence of humans	251
9.2	The Einstein, Podolsky and Rosen experiment to test whether the quantum theory is complete	257

TABLE INDEX

<i>Table no.</i>	<i>Page</i>
3.1 Major thermonuclear reactions within stars	44
3.2 Stellar evolution brief	62
3.3 List of the abundant molecules in interstellar space	67
4.1 Analysis of cometary dust	77
4.2 Mass distribution in the giant planets	98
4.3 A possible chronology for the formation of the Solar System	102
4.4 Mass distribution in the terrestrial planets	110
5.1 The chemical elements used by life and their cosmic abundances	128
7.1 Major features in human evolutionary history	206
8.1 Escape velocity from the rocky planets	223
8.2 The three Earth-like planets detected around a distant pulsar	233
8.3 List of planets discovered around nearby stars	235
9.1 Branchings to complexity that led to the emergence of life	250
