# CONTENTS

|   |  |       |
|---|--|-------|
|   | <i>Foreword by Christian de Duve, Nobel laureate</i> | xiii  |
|   | <i>Preface</i>                                       | xv    |
|   | <i>Acknowledgments</i>                               | xviii |
| 1 | <b>Locating humans in the Universe</b>               | 1     |
|   | Introduction   | 1     |
|   | Pascal's two infinities                              | 5     |
|   | Ascent to the extremely large                        | 8     |
|   | Descent to the extremely small                       | 11    |
| 2 | <b>The race toward complexity</b>                    | 19    |
|   | The grand beginning                                  | 19    |
|   | The first fossil trace                               | 21    |
|   | The Universe becomes transparent                     | 23    |
|   | The origin of the clusters of galaxies               | 28    |
|   | The birth of stars                                   | 32    |
|   | The quasars  | 37    |
| 3 | <b>The stellar alchemy of metals</b>                 | 43    |
|   | The life of the stars                                | 43    |
|   | The fast evolution of massive stars                  | 48    |
|   | The steady evolution of less massive stars           | 53    |
|   | The slow evolution of low-mass stars                 | 56    |
|   | The strange evolution of double stars                | 58    |
|   | Seeding interstellar space                           | 60    |
|   | The second generation of stars                       | 62    |
|   | The chemistry of interstellar clouds                 | 64    |

## CONTENTS

---

|   |  |     |
|---|--|-----|
| 4 | <b>The formation of the planets</b>        | 69  |
|   | The Universe grows old                     | 69  |
|   | Cosmic abundance of the elements           | 71  |
|   | The chondrites                             | 76  |
|   | Cometary dust                              | 79  |
|   | Variety of interstellar chemistry          | 80  |
|   | Gravitational collapse                     | 83  |
|   | The accretion disk of the Sun              | 84  |
|   | Temperature distribution in the disk       | 86  |
|   | Formation of planetesimals                 | 90  |
|   | The T Tauri wind of the Sun                | 94  |
|   | Agglomeration of the planets               | 95  |
|   | The giant planets                          | 97  |
|   | Asteroids and comets                       | 99  |
|   | The terrestrial planets                    | 101 |
|   | Agglomeration of the Earth                 | 101 |
|   | Formation of the Moon                      | 104 |
|   | Fate of the planetismsals                  | 105 |
|   | The planetary system                       | 107 |
| 5 | <b>The emergence of life</b>               | 113 |
|   | The origin of the biosphere                | 113 |
|   | Cometary bombardment                       | 116 |
|   | The atmosphere and the oceans of the Earth | 121 |
|   | The emergence of life on Earth             | 124 |
|   | Defining life                              | 126 |
|   | The genetic code                           | 129 |
|   | Fossil traces of evolution                 | 134 |
|   | Evolution of the genetic message           | 135 |
|   | Survival of the fittest                    | 138 |
|   | Evolution in molecular biology             | 139 |
|   | The origin of life                         | 145 |
|   | Dissipative structures                     | 146 |
|   | Chance or necessity ?                      | 149 |
| 6 | <b>The history of life</b>                 | 155 |
|   | The primordial Earth                       | 155 |
|   | Life makes its appearance                  | 158 |

## CONTENTS

---

|   |  |     |
|---|--|-----|
|   | The world of bacteria                        | 160 |
|   | The eukaryotic cell                          | 163 |
|   | The Earth and the Moon                       | 165 |
|   | The evolution of the atmosphere              | 166 |
|   | The age of the stromalites                   | 168 |
|   | Marine animals                               | 172 |
|   | Glaciations                                  | 173 |
|   | Sexual reproduction                          | 175 |
|   | Life invades the continents                  | 177 |
|   | The age of the dinosaurs                     | 180 |
|   | The major extinctions                        | 184 |
| 7 | <b>The awakening of intelligence</b>         | 195 |
|   | The nervous system                           | 195 |
|   | The age of the mammals                       | 198 |
|   | The evolution of the brain                   | 200 |
|   | The last glaciations                         | 202 |
|   | <i>Homo sapiens</i>                          | 204 |
| 8 | <b>The other worlds</b>                      | 209 |
|   | The plurality of inhabited worlds            | 209 |
|   | Exploration of neighboring planets           | 213 |
|   | Planet Mars                                  | 214 |
|   | Bacteria in a Martian meteorite              | 218 |
|   | Planet Venus                                 | 221 |
|   | Evolutionary divergence of the rocky planets | 222 |
|   | Elsewhere in the Solar System                | 225 |
|   | Where else could we find life ?              | 229 |
|   | Where are the other planetary systems?       | 232 |
|   | Oxygen and life                              | 235 |
|   | Intelligent life                             | 236 |
|   | In search of other civilizations             | 239 |
| 9 | <b>Perspectives</b>                          | 245 |
|   | The evolutionary thread                      | 245 |
|   | The 'Augustinian era'                        | 246 |
|   | After the Big Bang                           | 247 |
|   | Branchings toward complexity                 | 247 |

## CONTENTS

---

|   |     |
|---|-----|
| The anthropic principle   | 252 |
| Multiple universes  | 255 |
| The scale of the Universe   | 259 |
| The future of the Universe  | 260 |
| The future of our civilization  | 261 |
| The next millennium   | 262 |
| The distant future of life  | 266 |
| Where are the others?   | 268 |
| The answers of evolution  | 269 |
| Free will and quanta  | 271 |
| Why does the Universe exist?  | 272 |
| ‘The feeling of the mysterious’   | 274 |
| APPENDIX A The standard model of the physics of elementary particles      | 277 |
| APPENDIX B Symmetry in physics  | 279 |
| APPENDIX C The strange role of time in relativity                         | 281 |
| APPENDIX D The measurement of long time spans and the age of the Universe | 285 |
| APPENDIX E The standard model of the Big Bang                             | 289 |
| APPENDIX F The cause of the Big Bang and inflation                        | 293 |
| APPENDIX G Chirality  | 295 |
| Glossary  | 297 |
| Bibliography  | 309 |
| Figure index  | 313 |
| Table index   | 315 |
| Name index  | 316 |
| Subject index   | 319 |
