Contents

1 SEQUENCES OF LOW COMPLEXITY: AUTOMATIC AND STURMIAN SEQUENCES	1
1.1 Introduction	1
1.2 Complexity Function	2
1.2.1 Definition	2
1.2.2 Frequencies and Measure-Theoretic Entropy	4
1.2.3 Variational Principle	5
1.3 Symbolic Dynamical Systems	6
1.4 The Graph of Words	8
1.4.1 The Line Graph	10
1.4.2 Graph and Frequencies	11
1.5 Special factors	13
1.6 Sturmian sequences	14
1.6.1 A Particular Coding of Rotations	14
1.6.2 Frequencies of Factors of Sturmian Sequences	16
1.7 Automatic Sequences	17
1.7.1 Automata and Transcendence	18
1.7.2 Applications	19
1.7.3 The Multidimensional Case	21
1.7.4 Application to Diagonals	22
1.7.5 Transcendence of the Bracket Series	24
1.7.6 Complexity and Frequencies	26
1.8 Conclusion	28
1.8.1 Automaticity and Sturmian sequences	28
1.8.2 Sub-affine Complexity	28
2 SUBSTITUTION SUBSHIFTS AND BRATTELI DIAGRAMS	35
2.1 Subshifts	36
2.1.1 Notation: Words, Sequences, Morphisms	36
2.1.2 Subshifts	37
2.1.3 Minimal Systems	38
2.2 Substitutions	39

2.2.1	Substitution Subshifts	39
2.2.2	Fixed Points	40
2.3	Unique Ergodicity	42
2.3.1	Perron-Frobenius Theorem	42
2.3.2	Density of Letters	43
2.3.3	The Substitution σ_k on the Words of Length k	44
2.4	Structure of Substitution Subshifts	45
2.4.1	Structure of Substitution Dynamical Systems	45
2.5	Substitutions and Bratteli Diagrams	48
2.5.1	Bratteli Diagram Associated to a Substitution	48
2.5.2	The Vershik Map	50
2.5.3	An Isomorphism	51
2.5.4	The General Case	53
3	ALGEBRAIC ASPECTS OF SYMBOLIC DYNAMICS	57
3.1	Introduction	57
3.2	General Subshifts	58
3.2.1	Dynamical Systems	58
3.2.2	Full Shifts	58
3.2.3	Subshifts	59
3.2.4	Examples	59
3.3	Block Codes	60
3.3.1	Codes	60
3.3.2	Block Codes	60
3.3.3	Curtis-Hedlund-Lyndon	60
3.3.4	Higher Block Presentations	61
3.3.5	One-Block Codes	61
3.4	Shifts of Finite Type	62
3.4.1	Vertex Shifts	62
3.4.2	Edge Shifts	63
3.4.3	Matrices	64
3.4.4	Markov Characterization	64
3.4.5	Applications	64
3.5	SFT-like Subshifts	65
3.5.1	Sofic Shifts	65
3.5.2	Specification	66
3.5.3	Synchronized Systems	66
3.5.4	Coded Systems	66
3.5.5	The Progression	66
3.6	Minimal Subshifts	67
3.7	Matrix Invariants for SFTS	67
3.7.1	Nonnegative Matrices	68
3.7.2	Transitivity	69

CONTENTS

vii

3.7.3	Mixing	69
3.7.4	Entropy	70
3.7.5	Periodic Points	70
3.7.6	Zeta Function	71
3.7.7	Isomorphism	72
3.7.8	Eventual Isomorphism	73
3.7.9	Flow Equivalence	74
3.7.10	Relations	75
3.8	Dimension Groups and Shift Equivalence	75
3.8.1	Dimension Groups	75
3.8.2	Dimension Modules	77
3.8.3	Shift Equivalence	79
3.8.4	Further Developments	81
3.9	Automorphisms and Classification of SFTS	82
3.9.1	Automorphisms	82
3.9.2	Representations	83
3.10	The KRW Factorization Theorem	85
3.10.1	Statement of the Theorem	85
3.10.2	Nonsurjectivity of ρ	85
3.10.3	A Long Story	86
3.11	Classification	86
3.11.1	SE does not imply SSE: the Reducible Case	86
3.11.2	SE does not imply SSE: the Irreducible Case	87
4	DYNAMICS OF \mathbb{Z}^d ACTIONS ON MARKOV SUBGROUPS	89
4.1	Introduction	89
4.2	One-Dimensional Markov Subgroups	90
4.3	Decidability in One and Two-Dimensions	98
4.4	Markov Subgroups of $(\mathbb{Z}/2\mathbb{Z})^{\mathbb{Z}^2}$	104
4.5	Markov Subgroups Polynomial Rings	109
4.6	Conjugacy and Isomorphism in $(\mathbb{Z}/2\mathbb{Z})^{\mathbb{Z}^2}$	117
4.7	General \mathbb{Z}^d Actions	118
5	ASYMPTOTIC LAWS FOR SYMBOLIC DYNAMICAL SYSTEMS	123
5.1	Introduction	123
5.2	Preliminaries	124
5.2.1	Bernoulli Trials	124
5.2.2	Occurrence and Waiting Times	127
5.3	General Setup and Motivation	132
5.3.1	Return Maps and Expected Return Times	132

CONTENTS

5.3.2	Asymptotically Rare Events	134
5.3.3	Known Results and Motivation	135
5.4	Shifts of Finite Type and Equilibrium	
	States	143
5.4.1	Hölder Potentials	144
5.4.2	Entropy and Pressure	145
5.4.3	Ruelle-Perron-Frobenius Operator	146
5.4.4	The Central Limit Theorem	147
5.4.5	Pianigiani-Yorke Measure	149
5.5	Point Processes and Convergence in Law	153
5.5.1	Convergence of Point Processes	154
5.5.2	Entrance Times and Visiting Times	155
5.5.3	Final Remarks	160
5.5.4	Some Questions	161
6	ERGODIC THEORY AND DIOPHANTINE PROBLEMS	167
6.1	Introduction	167
6.2	Some Diophantine Problems Related to Polynomials and their Connections with Combinatorics and Dynamics	169
6.3	Ramsey Theory and Topological Dynamics	177
6.4	Density Ramsey Theory and Ergodic Theory of Multiple Recurrence	183
6.5	Polynomial Ergodic Theorems and Ramsey Theory	197
6.6	Appendix	200
7	NUMBER REPRESENTATION AND FINITE AUTOMATA	207
7.1	Introduction	207
7.2	Words and Finite Automata	208
7.3	Standard Representations of Numbers	210
7.3.1	Representation of Integers	210
7.3.2	Representation of Real Numbers	211
7.3.3	b -Recognizable Sets of Integers	212
7.4	Beta-Expansions	212
7.4.1	Definitions	212
7.4.2	The β -Shift	214
7.4.3	Classes of Numbers	216
7.4.4	Normalization in Base β	218
7.5	U -Representations	219
7.5.1	Definitions	219
7.5.2	The Set $L(U)$	220
