<i>Foreword by Jonathan L. Gross and Thomas W. Tucker</i>	<i>page xv</i>
<i>Preface</i>	xvii
Introduction	1
LOWELL W. BEINEKE and ROBIN J. WILSON	
1. Graph theory	1
2. Graphs in the plane	10
3. Surfaces	12
4. Graphs on surfaces	14
1 Embedding graphs on surfaces	18
JONATHAN L. GROSS and THOMAS W. TUCKER	
1. Introduction	18
2. Graphs and surfaces	19
3. Embeddings	20
4. Rotation systems	23
5. Covering spaces and voltage graphs	26
6. Enumeration	29
7. Algorithms	30
8. Graph minors	31
2 Maximum genus	34
JIANER CHEN and YUANQIU HUANG	
1. Introduction	34
2. Characterizations and complexity	36
3. Kuratowski-type theorems	38
4. Upper-embeddability	39
5. Lower bounds	40

x	<i>Contents</i>	
3	Distribution of embeddings	45
	JONATHAN L. GROSS	
	1. Introduction	45
	2. Enumerating embeddings by surface type	48
	3. Total embedding distributions	51
	4. Congruence classes	53
	5. The unimodality problem	55
	6. Average genus	56
	7. Stratification of embeddings	59
4	Algorithms and obstructions for embeddings	62
	BOJAN MOHAR	
	1. Introduction	62
	2. Planarity	64
	3. Outerplanarity and face covers	66
	4. Disc embeddings and the 2-path problem	68
	5. Graph minors and obstructions	69
	6. Algorithms for embeddability in general surfaces	73
	7. Computing the genus	75
5	Graph minors: generalizing Kuratowski's theorem	81
	R. BRUCE RICHTER	
	1. Introduction	81
	2. Graph decompositions	84
	3. Linked decompositions	88
	4. Graphs with bounded tree-width	94
	5. Finding large grids	99
	6. Embedding large grids	107
6	Colouring graphs on surfaces	111
	JOAN P. HUTCHINSON	
	1. Introduction	111
	2. High-end colouring	113
	3. A transition from high-end to low-end colouring	116
	4. Colouring graphs with few colours	119
	5. Girth and chromatic number	124
	6. List-colouring graphs	125
	7. More colouring extensions	127
	8. An open problem	129

<i>Contents</i>		xi
7	Crossing numbers	133
	R. BRUCE RICHTER and G. SALAZAR	
	1. Introduction	133
	2. What is the crossing number?	135
	3. General bounds	137
	4. Applications to geometry	139
	5. Crossing-critical graphs	139
	6. Other families of graphs	143
	7. Algorithmic questions	144
	8. Drawings in other surfaces	146
	9. Conclusion	147
8	Representing graphs and maps	151
	TOMAŽ PISANSKI and ARJANA ŽITNIK	
	1. Introduction	151
	2. Representations of graphs	152
	3. Energy and optimal representations	155
	4. Representations of maps	163
	5. Representations of maps in the plane	170
	6. Representations of incidence geometries and related topics	174
9	Enumerating coverings	181
	JIN HO KWAK and JAEUN LEE	
	1. Introduction	181
	2. Graph coverings	183
	3. Regular coverings	185
	4. Surface branched coverings	190
	5. Regular surface branched coverings	193
	6. Distribution of surface branched coverings	195
	7. Further remarks	196
10	Symmetric maps	199
	JOZEF ŠIRÁŇ and THOMAS W. TUCKER	
	1. Introduction	199
	2. Representing maps algebraically	200
	3. Regular maps	205
	4. Cayley maps	210
	5. Regular Cayley maps	212
	6. Edge-transitive maps	218
	7. Maps and mathematics	221

11	The genus of a group	225
	THOMAS W. TUCKER	
	1. Introduction	225
	2. Symmetric embeddings and groups acting on surfaces	226
	3. Quotient embeddings and voltage graphs	228
	4. Inequalities	232
	5. Groups of low genus	235
	6. Genera of families of groups	239
12	Embeddings and geometries	245
	ARTHUR T. WHITE	
	1. Introduction	245
	2. Surface models	248
	3. Projective geometries	250
	4. Affine geometries	253
	5. 3-configurations	256
	6. Partial geometries	260
	7. Regular embeddings for $PG(2, n)$	264
	8. Problems	265
13	Embeddings and designs	268
	M. J. GRANNELL and T. S. GRIGGS	
	1. Introduction	268
	2. Steiner triple systems and triangulations	270
	3. Recursive constructions	273
	4. Small systems	278
	5. Cyclic embeddings	280
	6. Concluding remarks	284
14	Infinite graphs and planar maps	289
	MARK E. WATKINS	
	1. Introduction	289
	2. Ends	290
	3. Automorphisms	293
	4. Connectivities	295
	5. Growth	300
	6. Infinite planar graphs and maps	303

<i>Contents</i>		xiii
15	Open problems	313
	DAN ARCHDEACON	
	1. Introduction	313
	2. Drawings and crossings	314
	3. Genus and obstructions	317
	4. Cycles and factors	320
	5. Colourings and flows	322
	6. Local planarity	324
	7. Thickness, book embeddings and covering graphs	325
	8. Geometrical topics	328
	9. Algorithms	330
	10. Infinite graphs	332
