978-0-521-80539-1 — Visions of the Future: Chemistry and Life Science
Edited by J. M. T. Thompson
Index
More Information

Index

algorithm, genetic, 56
animal electricity, 171
antichaos, 100
applications of diamond films, 88
Astronomy and Earth Science, companion book, preface
atom–laser interactions, 2–3
atom–molecule collisions, ultrafast dynamics of, 11–14
atomic motions, optical control over, 19–20
attosecond lasers, 18

bicontinuous mixtures, 98
bone adaptation
  computer simulation of, 121
  experiments, 119
bone and skin, mechanics of, 157
bone cells and matrix, 116
bone growth and maintenance, 118
brain, 171
  damage, 175, 178
  electrical stimulation, 172, 176
  magnetic stimulation, 176, 179, 180

cardiac
  cell models, 135
  organ models 137, 143
cars, making of, 155
catalysis
  enzyme, 21, 40
  protein dynamics, 27
cell models, cardiac, 135
cells
  nerve, 171
  of the bone, 116
chaos and antichaos, 100
chemical vapour deposition (CVD), 77
chemistry
  green, 59
  supramolecular, 64
chess, analogy with organic synthesis, 46
chiral catalysis, 72
clusters, ultrafast dynamics of, 15–16
colloidal particle interaction, 102
colloidal stability, 101
computer simulation of bone adaptation, 121
computing
  on the Internet, 165
  using DNA, 169
  using light beams, 167
CVD
  hot filament, 78
  microwave plasma, 79

designer materials, 72
detergents, made-to-measure silicas, 64–68
diamond
  films, 87
  gemstones, 75
  growth chemistry, 80
  industrial, 77
Dirac, Paul, 47

More Information

DNA
  genetic information, 100
  use in computing, 169
Dr Who, 46
drugs, designing, 153
duality, wave–particle, 22, 28

ear
  models, 160
  structure of inner, 162
Earth Science, companion book, preface
electrical brain stimulation 172, 176
electricity, animal, 171
electron transfer, 29
Electronics, companion book, preface
enzyme catalysis, 21, 40
enzyme mimics, chiral catalysis, 72

femtosecond, definition, 1
femtosecond lasers, principles of operation, 4–7
force fields, 49
fracture healing, 119

genetic algorithm, 56
genetic information, DNA, 100
green chemistry, 59
growth and maintenance of bone, 118
growth chemistry of diamond, 80

healing of fractures, 119
heart, virtual, 127, 134
heart models, 159
homunculus, 174
hot filament CVD, 78
human organs, computer models of, 137, 143, 151
hydrogen tunnelling
  dynamic barrier models, 34
  experimental evidence, 37
  tunnelling, static barrier models, 32

industrial diamonds, 77
inorganic microarchitecture, 98
integrationisms, 130
Internet, computing on, 165
ionization, by femtosecond lasers 3, 10, 11, 18
isotope, kinetic effect, 26

kinetic isotope effect, 26

laser–atom interactions, 2–3
lasers
  attosecond, 18
  femtosecond, principles of operation, 4–7
light beams, use in computing, 167

magnetic brain stimulation, 176, 179, 180
mechanics, bone and skin, 157
microarchitecture
  inorganic, 98
  organic, 106
  synthetic, 106
microwave plasma CVD, 79
Millennium Issues of the *Philosophical Transactions*, preface
modelling
  approach to, 134
  of unknown systems, 128 ff
  purpose of, 133
  utility of, 146 ff
molecule–atom collisions, ultrafast dynamics of, 11–14
molecules, ultrafast fragmentation of, 7–11

nerve cells, 171
neuropsychology, 175
neurosurgery, 172
nonlinear dynamics of bone adaptation, 122
nucleation, 86

optical control over atomic motions, 19–20
organ models
  cardiac, 137, 143, 159
  computer of human, 151

More Information

organic microarchitecture, 106
organic synthesis, 46

patients, virtual, 178
Pauling, Linus, 52
Philosophical Transactions of the Royal Society, preface
phosphenes, 176, 178
Physics and Electronics, companion book, preface
Physiome Project, 127, 131
potential energy curves, 7–8
protein dynamics, in classical catalysis, 27
purification of water, 71

quantum mechanics, 47
quantum tunnelling, 23

reductionism, 130
Royal Society, preface

silicas
  detergents as templates, 64
  made-to-measure, 65
skeletal adaptation, history of, 113–114
skeletal form and function, 114
skeletal imaging, 124
skeletal structure, 115
skin, mechanics of, 157
substrate materials, 84
supramolecular chemistry, 64
synthesis, organic, 46
synthetic microarchitecture, 106

transition state theory, 22, 25, 26
tunnelling
  of hydrogen, 32, 34, 37
  quantum, 23

ultrafast dynamics
  of atom–molecule collisions, 11–14
  of clusters, 15–16

virtual heart, 127, 134
virtual patients, 178
vitamin K3, clean synthesis of, 70

water purification, 71
wave–particle duality, 22, 28
World Wide Web, 54

zeolites, as shape selective materials, 60
