

Index

- Abecedarian Project, and early childhood education, 455, 471, 472, 473, 474, 480, 482
- Abelson, W., 444
- academic achievement: and childhood maltreatment, 163–4; and childhood poverty, 109, 246, 268; and development of children of alcoholics, 91; and early childhood intervention, 442; and exposure to violence, 396; IQ tests as predictor of, 16; mental health and intelligence in high- and low-risk children, 384–5. *See also* schools
- acetylcholine (Ach), and animal studies of brain development, 466, 467
- Ackerman, B. P., 368
- acquired immune deficiency syndrome (AIDS), 306
- adaptation: and children of alcoholics, 78–84; children of depressed parents and limits of, 63–4; debate on criteria for adjustment and, 7; evaluation of in specific context, 307–14; interventions and limits to, 539–41; measurement of, 514–17; and organizational model of development, 247; perspectives on context-specific, 294; and protective factors, 12–16; violence exposure and resilient, 402–403
- additive model, of resilience, 13–14
- adjustment: assessment of in maltreated children, 162–3; and childhood poverty, 269–75; and children of depressed parents, 69–70; of children in divorced and remarried families, 183–206; debate on criteria for adaptation and, 7; measures of parental, 137; prevalence of parental difficulties in, 140. *See also* social adjustment
- adolescence and adolescents: and adjustment to divorced and remarried families, 185, 186, 190, 202–3; definition of, 344; and depression in parents, 52–3; and development of children of alcoholics, 85–91; and developmental perspective on competence, 5; holistic perspective and study of competence in low-income urban, 323–38; poverty and personal attitudes toward deviance, 109; and school-based interventions, 537–8; and violence exposure, 399; vulnerability and

- adolescence (*cont.*)
 protective mechanisms for poor urban, 346–60
- Adolescent Pathways Project (APP), 323–38
- adoption: and environmental enrichment, 474–5; and studies of gene-environment interactions, 492
- adults: from divorced and remarried families, 185; hardiness and childhood resilience, 298; and risk modifiers, 524
- adversity: and adaptation in children of alcoholics, 78–84; age and response to, 499; assessment of in microsystem, 299–300; and bereaved children and children of divorce, 216–17; child-centered resources and prediction of competence in, 301–4; longitudinal study of resilience and, 133–51; and threats to development of competence, 7–9. *See also* risk and risk factors
- affective disorders, and maternal drug abuse, 107–8, 112–16, 125. *See also* depression
- affiliations: delinquency and antisocial, 313; and factors contributing to resilience, 133. *See also* peers and peer relationships
- African Americans: and adolescence, 344; and early childhood intervention, 446; and expectation of discrimination, 420; and extended kin networks, 353; multiple risks and peer networks, 379–81; and perceived discrimination as risk factor, 419; and poverty rates, 345; and prevalence of racism, 418; remarriage and divorce patterns, 182; and role of grandparents in family, 201; violence and victimization, 349, 394–5. *See also* race
- after-school activities, and context-specific protective effects, 312–13
- age: and adjustment to divorce and remarriage, 189–90; and childhood maltreatment, 174; children in poverty and parental substance abuse, 108; and children's responses to stress and adversity, 499; and developmental perspective on competence, 5; and perceived discrimination, 422–3; and violence exposure, 398–9. *See also* adolescence and adolescents; infants; preschool children; school-age children
- aggression: and childhood maltreatment, 157, 168, 174; and exposure to violence, 349; and self-perceptions in urban context, 310, 311
- Aguilar, B., 174
- alcohol abuse and alcoholism: and adaptation in children of alcoholics, 78–80; elevated risk of in children of alcoholics, 76, 77; and genetic variations in sensitivity to alcohol, 493; and intervention programs for children of alcoholics, 98–9; and interviews, 135; longitudinal study of vulnerability and resilience in children of alcoholics, 80–98; and measures of parental adjustment, 137; pregnancy and fetal effects of, 494; prevalence of parental, 140
- Alegria, M., 58–9
- Alkon, A., 272
- Allport, G. W., 421
- Alzheimer's disease, 491–2
- Amato, P. R., 183
- American Psychologist* (journal), 323
- Anderson, J., 367
- Anderson, S., 440
- Anglin, T. M., 395
- animal studies: of enriched environments and brain development, 463–4, 466–71,

- 473–8, 483; of gene-environment interactions, 491, 495
- Anthony, E. J., 2, 254
- antisocial behavior: and adjustment to divorce, 188; and childhood maltreatment, 157; and competence problems, 6; and delinquent peer groups, 351; and genetic influences, 495, 496; IQ scores and risk for, 10; and parental alcoholism, 97; and Pitt Mother and Child Project, 275–86; and profiles of perceived peer transactions, 332; and self-reports of family transactional patterns, 328; and sex differences, 498. *See also* antisocial personality disorder
- Antisocial Behavior Inventory, 82
- antisocial personality disorder (ASPD): and adversity in children of alcoholics, 82, 92; and comorbidity, 97; and maternal substance abuse, 112; measures of, 134. *See also* antisocial behavior
- anxiety: attributions about child and maternal, 40; and exposure to discrimination, 429; of Puerto Rican mothers about discrimination, 421; and substance abuse in women, 105; and violence exposure, 395
- anxiety disorders: and depression, 106; and maternal drug abuse, 112–16; measures of, 134
- Apo-Eo-4 allele, 491–2
- appraisal, and children of divorce, 220–1
- Arellano, A., 417
- Armsden, G. C., 137
- arousal: exposure to violence and physiological, 396; self-regulation of emotional, 248
- assessment: of adjustment in childhood poverty, 269–70; of adjustment in maltreated children, 162–3; of adversity, 8; caregiving systems and behavioral adjustment, 30–1; of competence, 5–6; of protective factors for maltreated children, 164; of risks, 365–6. *See also* diagnosis and diagnostic criteria; evaluation
- asset-focused designs, for intervention programs, 19–20
- assortative mating, and depression, 57
- athletics, and competence of low-income urban adolescents, 335, 336, 338
- attachment: and childhood poverty, 271, 283; and emotion processing in infants and preschool children, 33–5; as factor in resilience, 133, 137, 148; and infant–parent psychotherapy, 256; organizational model of development and early competence, 252
- Attar, B. K., 399
- attentional problems, and child factors in resilience, 137–8
- attributional ambiguity, and perceived discrimination, 424–5
- attributions: mental illness in parent and cognitions about child, 40; mental illness in parent and cognitions about self, 41
- authoritative parenting: as protective factor in marital transitions, 196; as predictor of achievement and conduct, 16. *See also* parents and parenting
