1 Conceptual origins: variability in time and space	1
Modelling philosophy	2
Herbivores and vegetation	4
Modelling technology	10
Structure of the book	10
2 Consumer–resource models: theory and formulation	13
Basic theory	13
Descriptive population models	15
Demographically structured population models	20
Interactive consumer–resource models	21
Metaphysiological population models	29
Overview	36
3 Resource abundance: intake response and time frames	38
Basic theory	39
Within-patch feeding	42
Foraging spells	47
Daily food intake	52
Half-saturation level for intake	53
Allometry of food intake	55
Influences on the form of the intake response	56
Overview	57

viii • Contents

4	Resource distribution: patch scales and depletion	61
	Feeding sites	62
	Patch acceptance	63
	Patch departure	65
	Foraging areas	75
	Habitat types	77
	Waterpoint restrictions	79
	Selectivity in foraging	80
	Overview	83
5	Resource quality: nutritional gain and diet choice	85
	Diet breadth model	86
	Palatability classes	92
	Evaluating the diet breadth model	97
	Form of the nutritional gain response	105
	Overview	108
6	Resource constraints: physiological capacities and costs	110
	Linear programming models	111
	Digestive capacity	116
	Metabolic satiation	125
	Thermal tolerance	127
	Constraints versus cost–benefit isoclines	131
	Truncation of the intake response	133
	Overview	134
7	Resource allocation: growth, storage and reproduction	136
	Relative growth potential	137
	Storage	142
	Growth versus storage	151
	Reproduction	153
	Senescence	158
	Flux- versus state-dependent mortality	159
	Overview	160

8	Resource production: regeneration and attrition	162
	General production function	163
	Grass production model	165
	Browse production model	177
	Resource-related dynamics for plants	180
	Overview	182
9	Resource competition: exploitation and density dependence	184
	Stocking density models	185
	Growth potential	188
	Alternative models of resource production	191
	Competitive distributions	202
	Resource versus density dependence	203
	Overview	204
10	Resource-dependent mortality: nutrition, predation and demography	205
	Mortality function	206
	Observed mortality patterns	209
	Predation	224
	State-dependent mortality	227
	Demographic structure	228
	Overview	230
11	Habitat suitability: resource components and stocking densities	232
	Determinants of browser abundance	233
	Range condition and grazer stocking densities	244
	Generic resource types	253
	Overview	257
12	Resource partitioning: competition and coexistence	264
	Lotka–Volterra model	265
	Competitive habitat partitioning	266
	Exploitation competition model	269
	Size difference for coexistence	279
	Ecomorphological distinctions	281

x	•	Contents	
		Tradeoffs between facilitation and competition	288
		Overview	295
13		Population dynamics: resource basis for instability	301
		Interactive herbivore–vegetation dynamics	302
		Soay sheep example	317
		Other ungulate populations	329
		Alternative modelling approaches	330
		Overview	332
14		An adaptive resource ecology: foundation and prospects	335
		Retrospective review	335
		Prospects	337
		Broader issues	341
		Overview	345
		<i>References</i>	346
		<i>Index</i>	371
