<b>Preface</b> .....	<b>xi</b>
<b>Chapter 1 Introduction</b> .....	<b>1</b>
1.1 Motivation: Stochastic Differential Equations .....	1
The Obstacle 4, Itô's Way Out of the Quandary 5, Summary: The Task Ahead 6	
1.2 Wiener Process .....	9
Existence of Wiener Process 11, Uniqueness of Wiener Measure 14, Non-Differentiability of the Wiener Path 17, Supplements and Additional Exercises 18	
1.3 The General Model .....	20
Filtrations on Measurable Spaces 21, The Base Space 22, Processes 23, Stopping Times and Stochastic Intervals 27, Some Examples of Stopping Times 29, Probabilities 32, The Sizes of Random Variables 33, Two Notions of Equality for Processes 34, The Natural Conditions 36	
<b>Chapter 2 Integrators and Martingales</b> .....	<b>43</b>
Step Functions and Lebesgue–Stieltjes Integrators on the Line 43	
2.1 The Elementary Stochastic Integral .....	46
Elementary Stochastic Integrands 46, The Elementary Stochastic Integral 47, The Elementary Integral and Stopping Times 47, $L^p$ -Integrators 49, Local Properties 51	
2.2 The Semivariations .....	53
The Size of an Integrator 54, Vectors of Integrators 56, The Natural Conditions 56	
2.3 Path Regularity of Integrators .....	58
Right-Continuity and Left Limits 58, Boundedness of the Paths 61, Redefinition of Integrators 62, The Maximal Inequality 63, Law and Canonical Representation 64	
2.4 Processes of Finite Variation .....	67
Decomposition into Continuous and Jump Parts 69, The Change-of-Variable Formula 70	
2.5 Martingales .....	71
Submartingales and Supermartingales 73, Regularity of the Paths: Right-Continuity and Left Limits 74, Boundedness of the Paths 76, Doob's Optional Stopping Theorem 77, Martingales Are Integrators 78, Martingales in $L^p$ 80	
<b>Chapter 3 Extension of the Integral</b> .....	<b>87</b>
Daniell's Extension Procedure on the Line 87	
3.1 The Daniell Mean .....	88
A Temporary Assumption 89, Properties of the Daniell Mean 90	
3.2 The Integration Theory of a Mean .....	94
Negligible Functions and Sets 95, Processes Finite for the Mean and Defined Almost Everywhere 97, Integrable Processes and the Stochastic Integral 99, Permanence Properties of Integrable Functions 101, Permanence Under Algebraic and Order Operations 101, Permanence Under Pointwise Limits of Sequences 102, Integrable Sets 104	

viii	Contents	
3.3	Countable Additivity in $p$ -Mean	106
	The Integration Theory of Vectors of Integrators	109
3.4	Measurability	110
	Permanence Under Limits of Sequences 111, Permanence Under Algebraic and Order Operations 112, The Integrability Criterion 113, Measurable Sets 114	
3.5	Predictable and Previsible Processes	115
	Predictable Processes 115, Previsible Processes 118, Predictable Stopping Times 118, Accessible Stopping Times 122	
3.6	Special Properties of Daniell's Mean	123
	Maximality 123, Continuity Along Increasing Sequences 124, Predictable Envelopes 125, Regularity 128, Stability Under Change of Measure 129	
3.7	The Indefinite Integral	130
	The Indefinite Integral 132, Integration Theory of the Indefinite Integral 135, A General Integrability Criterion 137, Approximation of the Integral via Partitions 138, Pathwise Computation of the Indefinite Integral 140, Integrators of Finite Variation 144	
3.8	Functions of Integrators	145
	Square Bracket and Square Function of an Integrator 148, The Square Bracket of Two Integrators 150, The Square Bracket of an Indefinite Integral 153, Application: The Jump of an Indefinite Integral 155	
3.9	Itô's Formula	157
	The Doléans–Dade Exponential 159, Additional Exercises 161, Girsanov Theorems 162, The Stratonovich Integral 168	
3.10	Random Measures	171
	$\sigma$ -Additivity 174, Law and Canonical Representation 175, Example: Wiener Random Measure 177, Example: The Jump Measure of an Integrator 180, Strict Random Measures and Point Processes 183, Example: Poisson Point Processes 184, The Girsanov Theorem for Poisson Point Processes 185	
<b>Chapter 4</b>	<b>Control of Integral and Integrator</b>	<b>187</b>
4.1	Change of Measure — Factorization	187
	A Simple Case 187, The Main Factorization Theorem 191, Proof for $p > 0$ 195, Proof for $p = 0$ 205	
4.2	Martingale Inequalities	209
	Fefferman's Inequality 209, The Burkholder–Davis–Gundy Inequalities 213, The Hardy Mean 216, Martingale Representation on Wiener Space 218, Additional Exercises 219	
4.3	The Doob–Meyer Decomposition	221
	Doléans–Dade Measures and Processes 222, Proof of Theorem 4.3.1: Necessity, Uniqueness, and Existence 225, Proof of Theorem 4.3.1: The Inequalities 227, The Previsible Square Function 228, The Doob–Meyer Decomposition of a Random Measure 231	
4.4	Semimartingales	232
	Integrators Are Semimartingales 233, Various Decompositions of an Integrator 234	
4.5	Previsible Control of Integrators	238
	Controlling a Single Integrator 239, Previsible Control of Vectors of Integrators 246, Previsible Control of Random Measures 251	
4.6	Lévy Processes	253
	The Lévy–Khintchine Formula 257, The Martingale Representation Theorem 261, Canonical Components of a Lévy Process 265, Construction of Lévy Processes 267, Feller Semigroup and Generator 268	

<b>Chapter 5 Stochastic Differential Equations</b> .....	<b>271</b>
5.1 Introduction .....	271
First Assumptions on the Data and Definition of Solution 272, Example: The Ordinary Differential Equation (ODE) 273, ODE: Flows and Actions 278, ODE: Approximation 280	
5.2 Existence and Uniqueness of the Solution .....	282
The Picard Norms 283, Lipschitz Conditions 285, Existence and Uniqueness of the Solution 289, Stability 293, Differential Equations Driven by Random Measures 296, The Classical SDE 297	
5.3 Stability: Differentiability in Parameters .....	298
The Derivative of the Solution 301, Pathwise Differentiability 303, Higher Order Derivatives 305	
5.4 Pathwise Computation of the Solution .....	310
The Case of Markovian Coupling Coefficients 311, The Case of Endogenous Coupling Coefficients 314, The Universal Solution 316, A Non-Adaptive Scheme 317, The Stratonovich Equation 320, Higher Order Approximation: Obstructions 321, Higher Order Approximation: Results 326	
5.5 Weak Solutions .....	330
The Size of the Solution 332, Existence of Weak Solutions 333, Uniqueness 337	
5.6 Stochastic Flows .....	343
Stochastic Flows with a Continuous Driver 343, Drivers with Small Jumps 346, Markovian Stochastic Flows 347, Markovian Stochastic Flows Driven by a Lévy Process 349	
5.7 Semigroups, Markov Processes, and PDE .....	351
Stochastic Representation of Feller Semigroups 351	
<b>Appendix A Complements to Topology and Measure Theory</b> ....	<b>363</b>
A.1 Notations and Conventions .....	363
A.2 Topological Miscellanea .....	366
The Theorem of Stone–Weierstraß 366, Topologies, Filters, Uniformities 373, Semi-continuity 376, Separable Metric Spaces 377, Topological Vector Spaces 379, The Minimax Theorem, Lemmas of Gronwall and Kolmogoroff 382, Differentiation 388	
A.3 Measure and Integration .....	391
$\sigma$ -Algebras 391, Sequential Closure 391, Measures and Integrals 394, Order-Continuous and Tight Elementary Integrals 398, Projective Systems of Measures 401, Products of Elementary Integrals 402, Infinite Products of Elementary Integrals 404, Images, Law, and Distribution 405, The Vector Lattice of All Measures 406, Conditional Expectation 407, Numerical and $\sigma$ -Finite Measures 408, Characteristic Functions 409, Convolution 413, Liftings, Disintegration of Measures 414, Gaussian and Poisson Random Variables 419	
A.4 Weak Convergence of Measures .....	421
Uniform Tightness 425, Application: Donsker's Theorem 426	
A.5 Analytic Sets and Capacity .....	432
Applications to Stochastic Analysis 436, Supplements and Additional Exercises 440	
A.6 Suslin Spaces and Tightness of Measures .....	440
Polish and Suslin Spaces 440	
A.7 The Skorohod Topology .....	443
A.8 The $L^p$ -Spaces .....	448
Marcinkiewicz Interpolation 453, Khintchine's Inequalities 455, Stable Type 458	

x	<b>Contents</b>	
	<b>A.9 Semigroups of Operators</b> .....	<b>463</b>
	Resolvent and Generator 463, Feller Semigroups 465, The Natural Extension of a Feller Semigroup 467	
	<b>Appendix B Answers to Selected Problems</b> .....	<b>470</b>
	<b>References</b> .....	<b>477</b>
	<b>Index of Notations</b> .....	<b>483</b>
	<b>Index</b> .....	<b>489</b>
	<b>Answers</b> ..... <a href="http://www.ma.utexas.edu/users/cup/Answers">http://www.ma.utexas.edu/users/cup/Answers</a>	
	<b>Full Indexes</b> .... <a href="http://www.ma.utexas.edu/users/cup/Indexes">http://www.ma.utexas.edu/users/cup/Indexes</a>	
	<b>Errata</b> ..... <a href="http://www.ma.utexas.edu/users/cup/Errata">http://www.ma.utexas.edu/users/cup/Errata</a>
