

Index

- acyl homoserine lactones, 11, 19–21
 - antibiotic resistance and, 44–6
 - aquatic biofilms and, 23
 - catheter biofilms and, 23, 140
 - immune response and, 26
 - in lung infections, 27–8, 293, 295,
 - quantification of, 25–6
- adhesion
 - alginate synthesis and, 6
 - antibiotic resistance and, 12
 - assimilation and, 6, 12
 - to catheters, 90–1
 - effect of antibiotics on, 38
 - initial events in, 3–5, 6, 37, 143–4, 174
 - intracellular signalling and, 13
 - gene expression and, 6
 - growth rate and, 6
 - respiration and, 6
 - transport and, 12
- agr* locus, 125–7
- Agrobacterium tumefaciens*, 23
- alarmones, 43
- antibiotic resistance
 - of device-related biofilms, 141–2
 - dormancy and, 36–7, 43
 - efflux systems and, 40–1
 - general stress response and, 43–4
 - growth rate and, 42–3, 97–8
 - induction of, 12
 - quorum sensing and, 44–6
- antibiotics
 - adhesion and, 38, 152–3
 - efflux systems, 40–1
 - implant infections and, 59, 68–9
 - inactivation by enzymes, 40, 96–7
 - incorporation into medical devices, 151–3
 - penetration into biofilms, 39–40, 41, 68, 96–7
 - prophylactic use of, 59, 68–9
 - resistance of biofilms to, 29, 30, 39–48, 92, 94–6, 141–2, 192, 300–1
- Brownian motion, 3, 4, 37,
- Burkholderia cepacia*
 - biofilm formation by, 28
- carbon catabolite repression
 - and biofilm formation, 222
- cellulose production,
 - by *E. coli*, 245
 - by *Sal. enterica*, 244–9
- chemotaxis, 3
- chlorhexidine and medical devices, 155–6, 157
- co-aggregation, 176, 195
- conditioning film, 4, 37, 62, 91, 142–3, 174, 191, 194
- confocal laser scanning microscopy
 - of catheter biofilms, 141
 - of dental plaque, 177–8
 - of intestinal biofilms, 273–5
- conjugative pili, 5
- curli
 - of *E. coli*, 5, 12, 13–14, 196, 199, 251
- cystic fibrosis
 - lung infections and, 26–28, 289–304

- pathophysiology of, 288–9
- treatment of, 300–4
- dental plaque
 - antimicrobial agents and, 192
 - fluoride and, 186
 - formation of, 173–6, 190–2, 221–5
 - gene expression in, 214–25
 - microbial succession in, 174–6, 192
 - pH within, 180–5, 214–16
 - physiology of, 180–6
 - structure of, 173–80, 190–2
- detachment of cells from biofilms, 22, 29
- dormancy
 - antibiotic resistance and, 36–7, 42–3
- encrustation of catheters, 136–7, 144–50
 - frequency of occurrence of, 137
 - mechanism of, 146–8
 - organisms involved in, 146–7
 - prevention of, 150–1
 - structure of, 149–50
 - types of, 144–5
- Escherichia coli*
 - adhesion of, 4
 - catheters and, 5, 142–3,
 - cellulose production by, 245
 - curli of, 5, 12, 13–14, 196, 199, 250–1
 - flagella synthesis in, 11–12
 - gene expression in, 6, 7, 8, 9
 - rdar morphotype of, 231–2, 250–1, 254–5
 - signal transduction in 13–14
 - twitching motility in, 37
- faeces
 - microflora of, 262–4
- fimbriae,
 - of *E. coli*, 5, 13, 196
 - of *Ps. aeruginosa*, 5
 - of *Sal. enterica*, 239–43, 253–4
 - of *Strep. parasanguinis*, 196
- flagella
 - regulation of, 11–12
- fluorescence lifetime imaging, 180–6
- gene exchange in biofilms, 203–4
- general stress response, 43–4, 47
- glycocalyx 37
 - of catheter biofilms, 141
- inhibition of formation of, 100
- interaction of antibiotics with, 39–40, 96–7
- quorum sensing and, 45
- of *Staph. epidermidis* biofilms, 111
- of *Strep. mutans* biofilms, 217–21
- implant infections
 - animal models of, 64–77
 - causative agents of, 61–2, 72–3, 110
 - corrosion and, 63, 70–1
 - effect of biomaterial on, 69–70
 - evaluation of, 74–7
 - frequency of, 59–60
 - histology of, 76–7
 - host defences and, 63–4
 - implant wear and, 62–3
 - origin of, 50–1
 - radiography of, 74–5
 - tissue integration and, 62–3
- intestine, large
 - bacterial antagonism in, 271–2
 - biofilm populations in the lumen of, 265–6
 - colonisation of mucosal surfaces of, 266–71
 - factors affecting colonisation of, 268–71
 - host defences of, 269–70
 - lactobacilli in, 269–71
 - modelling of biofilms in, 277–81
 - role of microflora in health and disease 264
 - sulphate-reducing bacteria of, 277–81
 - surface-associated bacteria in, 264–71
 - ulcerative colitis and, 272–7
- intravascular catheter-related infections
 - antibiotics and, 94–7, 101–2
 - causative agents of, 92–3
 - frequency of, 87–8
 - prevention of, 99–102
- intravascular catheters
 - biofilm formation on, 89–92
 - coating of, 101–2
 - uses of, 86–8
- iodine and medical devices, 157–8
- Klebsiella pneumoniae*
 - catheter infections and, 97–8

Index

313

- lantibiotics
 - of *Staph. epidermidis*, 121–2
 - of streptococci, 198
- las* quorum sensing system, 19–21, 24–25, 45, 293–8
- lipases
 - of *Staph. epidermidis*, 121, 122
- lipopolysaccharide
 - as an adhesin, 5, 12, 24
- mar* operon, 40–1, 98
- models
 - animal, 64–77, 90
 - laboratory, 38–9, 214–16, 277–81
- phase variation,
 - in *Staph. epidermidis*, 128
- Proteus* spp.
 - and catheter encrustation, 146–8
- protozoa, 36
- Pseudomonas aeruginosa*
 - adhesion of, 4, 22, 23, 290
 - alginate of, 6, 27, 295–8
 - antibiotic resistance of, 12, 30, 40–41, 96–7
 - biofilm formation by, 21–28, 29, 292–304
 - catheter infections by, 96–7
 - evasion of immune response by, 298–300
 - flagella of, 11, 24
 - implant infections by, 68
 - lung infections and, 26–28, 289–304
 - polyphosphates in, 47
 - proteome analysis of, 6–11
 - quorum sensing in, 11, 12, 18–28, 30, 45–6, 293–8
 - transcriptome analysis of, 6–11
 - twitching motility by, 4, 24, 37, 199, 293–4
- Pseudomonas fluorescens*
 - adhesion of, 4
- Pseudomonas putida*
 - proteome analysis of, 6–11
 - transcriptome analysis of, 6–11
 - antibiotic resistance in, 12
- quorum sensing
 - antibiotic resistance and, 44–6
 - autoinducers and, 18–23, 25–26
 - biofilm formation and, 21–25
 - control of enzyme synthesis by, 21
 - control of gene expression by, 21, 24–5
 - efflux pumps and, 41
 - and growth, 199
 - immune response and, 26
 - inhibition of, 29
 - las* system, 19–21, 24–25
 - in lung infections, 26–28
 - in periodontal pathogens, 198–9
 - in *Ps. aeruginosa*, 18–28, 30, 293–8
 - rhl* system, 19–21, 24–25
 - in streptococci, 197–9, 222–3
 - transcriptional activators and, 18–21
- radiography
 - implant infections and, 74–5
- rhl* quorum sensing system, 19–21, 24–5, 47
- rotorotorque, 215–16
- Salmonella enterica* serotype
 - Typhimurium
 - cellulose production by, 244–9
 - fimbriae of, 239–43
 - multicellular behaviour of, 232–3
 - rdar morphotype of, 231
 - regulation of multicellular behaviour by, 232–9
- sar* locus, 127–8
- sigB* operon, 125
- signal transduction
 - adhesion and, 13–14
- silver and medical devices, 155–6, 157
- SOS system, 41–2
- Staphylococcus aureus*
 - adhesion of, 5
 - attachment to extracellular matrix proteins, 91
 - catheter infections by, 90–1
 - extracellular enzymes of, 122–23
 - implant infections by, 61–2, 65–8, 69–70
 - teichoic acids of, 112–13
 - quorum sensing in, 46
- Staphylococcus epidermidis*
 - accumulation-associated protein of, 120
 - adhesion of, 5, 111, 112–18
 - attachment to extracellular matrix proteins, 91, 115–18
 - biofilm formation by, 110–35
 - capsular polysaccharide of, 114–15

- catheter infections by, 90–1, 95, 110
- extracellular enzymes of, 121, 122–23
- host defences and, 123–4
- implant infections by, 61–2, 68, 69–70, 110
- lantibiotics of, 121–2
- lipases of, 121
- polysaccharide intercellular adhesin of, 118–20
- regulation of biofilm formation by, 124–8
- slime-associated antigen of, 120
- surface-associated proteins of, 113–14, 120
- teichoic acids of, 112–3
- Streptococcus gordonii*
 - adhesins of, 194–7
 - adhesion of, 5, 195
 - biofilm formation by, 193–202
 - cell wall formation and biofilm formation in, 199–202
 - co-aggregation with *Porphyromonas gingivalis*, 195
 - competence in, 197–8
 - quorum sensing in, 197–9
- Streptococcus mutans*
 - biofilm formation by, 202–3
 - genes involved in biofilm formation by, 202–3, 222–5
 - polysaccharide production by, 217–21
 - two component signal transduction systems of, 223
- Streptococcus salivarius*
 - gene expression in biofilms of, 214–16
- TolA* gene
 - of *Ps. aeruginosa*, 12
- transport of microbes
 - active, 3
 - diffusive, 3
 - passive, 3
- transposon mutagenesis
 - and adhesion, 4, 5
 - and biofilm formation, 192–3
 - of *Staph. aureus*, 113–14
 - of *Staph. epidermidis*, 113
- two-photon excitation microscopy, 178–86
- urease-producing bacteria, 146–7, 214–16
- urinary catheters
 - adhesion of bacteria to, 137–8, 143–4
 - biofilm formation on, 140–1
 - encrustation of, 136–7, 144–50
 - prevention of biofilm formation on, 151–61
 - urinary tract infections and, 138–40
- Vibrio cholerae*
 - adhesion of, 4
