|          |   |    |
|----------|---|----|
|          | <i>Preface</i>                                      | ix |
| <b>1</b> | <b>Introduction</b>                                 | 1  |
|          | Terminology   | 3  |
|          | Classifying games                                   | 6  |
|          | A brief history of game theory                      | 8  |
|          | Layout  | 14 |
| <b>2</b> | <b>Games of skill</b>                               | 17 |
|          | Linear programming, optimisation and basic calculus | 18 |
|          | The Lagrange method of partial derivatives          | 27 |
| <b>3</b> | <b>Games of chance</b>                              | 32 |
|          | An introduction to basic probability theory         | 33 |
|          | Games of chance involving risk                      | 37 |
|          | Games of chance involving uncertainty               | 45 |

|          |  |     |
|----------|--|-----|
| <b>4</b> | <b>Sequential decision making and cooperative games of strategy</b>                                      | 48  |
|          | Representing sequential decision making  | 49  |
|          | Sequential decision making in single-player games  | 52  |
|          | Sequential decision making in two-player and multi-player games  | 66  |
|          | Cooperative two-person games   | 72  |
| <b>5</b> | <b>Two-person zero-sum games of strategy</b>   | 77  |
|          | Representing zero-sum games  | 78  |
|          | Games with saddle points   | 80  |
|          | Games with no saddle points  | 86  |
|          | Large matrices generally   | 90  |
|          | Interval and ordinal scales for pay-offs   | 93  |
| <b>6</b> | <b>Two-person mixed-motive games of strategy</b>   | 98  |
|          | Representing mixed-motive games and the Nash equilibrium   | 99  |
|          | Mixed-motive games without single equilibrium points:<br>archetype 1 – leadership games                  | 102 |
|          | Mixed-motive games without single equilibrium points:<br>archetype 2 – heroic games                      | 104 |
|          | Mixed-motive games without single equilibrium points:<br>archetype 3 – exploitation games                | 105 |
|          | Mixed-motive games without single equilibrium points:<br>archetype 4 – martyrdom games                   | 107 |
|          | Summary of features of mixed-motive prototypes   | 113 |
|          | The Cournot, von Stackelberg and Bertrand duopolies:<br>an interesting application of mixed-motive games | 115 |
|          | Solving games without Nash equilibrium points using mixed<br>strategies                                  | 129 |

|            |   |     |
|------------|---|-----|
| <b>vii</b> | <b>Contents</b>                                 |     |
| <hr/>      |   |     |
| <b>7</b>   | <b>Repeated games</b>                           | 135 |
|            | Infinitely repeated games                       | 135 |
|            | Finitely repeated games                         | 139 |
| <b>8</b>   | <b>Multi-person games, coalitions and power</b> | 149 |
|            | Non-cooperative multi-person games              | 150 |
|            | Mixed-motive multi-person games                 | 151 |
|            | Partially cooperative multi-person games        | 153 |
|            | Indices of power: measuring influence           | 155 |
| <b>9</b>   | <b>A critique of game theory</b>                | 174 |
|            | Rationality                                     | 174 |
|            | Indeterminacy                                   | 177 |
|            | Inconsistency                                   | 178 |
|            | Conclusion                                      | 180 |
|            | <i>Appendix A Proof of the minimax theorem</i>  | 182 |
|            | <i>Appendix B Proof of Bayes's theorem</i>      | 190 |
|            | <i>Bibliography</i>                             | 192 |
|            | <i>Index</i>                                    | 199 |
