

Contents

<i>Preface</i>	<i>page ix</i>
1 Introduction	1
2 Positive Maps	9
3 Completely Positive Maps	26
4 Dilation Theorems	43
5 Commuting Contractions on Hilbert Space	58
6 Completely Positive Maps into M_n	73
7 Arveson's Extension Theorems	84
8 Completely Bounded Maps	97
9 Completely Bounded Homomorphisms	120
10 Polynomially Bounded and Power-Bounded Operators	135
11 Applications to K -Spectral Sets	150
12 Tensor Products and Joint Spectral Sets	159
13 Abstract Characterizations of Operator Systems and Operator Spaces	175
14 An Operator Space Bestiary	186
15 Injective Envelopes	206
16 Abstract Operator Algebras	225
17 Completely Bounded Multilinear Maps and the Haagerup Tensor Norm	239
18 Universal Operator Algebras and Factorization	260
19 Similarity and Factorization	273
<i>Bibliography</i>	285
<i>Index</i>	297
