Volume 1	
<i>Preface to second edition</i>	page ix
<i>Preface to first edition</i>	xi
1 Introduction	1
1.1 Background	1
1.2 Structure of disordered chains and the liquid state	3
1.3 The ordered polymer chain	8
1.4 Morphological features	14
References	22
2 Fusion of homopolymers	24
2.1 Introduction	24
2.2 Nature of the fusion process	27
2.3 Fusion of the <i>n</i> -alkanes and other oligomers	35
2.4 Polymer equilibrium	49
2.5 Nonequilibrium states	64
References	67
3 Polymer–diluent mixtures	70
3.1 Introduction	70
3.2 Melting temperature: concentrated and moderately dilute mixtures	70
3.3 Crystallization from dilute solution: flexible chains	87
3.4 Helix–coil transition	96
3.5 Transformations without change in molecular conformation	103
3.6 Chemical reactions: melting and compound formation	110
References	117
4 Polymer–polymer mixtures	122
4.1 Introduction	122
4.2 Homogeneous melt: background	123
4.3 Two chemically identical polymers differing in molecular weight	132

vi	<i>Contents</i>	
4.4	Crystallization from a heterogeneous melt	135
	References	138
5	Fusion of copolymers	141
5.1	Introduction	141
5.2	Equilibrium theory	142
5.3	Nonequilibrium considerations	154
5.4	Experimental results: random type copolymers	156
5.5	Branching	193
5.6	Alternating copolymers	195
5.7	Block or ordered copolymers	200
5.8	Copolymer–diluent mixtures	224
	References	227
6	Thermodynamic quantities	236
6.1	Introduction	236
6.2	Melting temperatures, heats and entropies of fusion	236
6.3	Entropy of fusion	310
6.4	Polymorphism	319
	References	327
7	Fusion of cross-linked polymers	337
7.1	Introduction	337
7.2	Theory of the melting of isotropic networks	339
7.3	Melting temperature of networks formed from random chains	342
7.4	Melting temperature of networks formed from axially ordered chains	346
7.5	Melting temperature of networks formed from randomly arranged crystallites	348
7.6	Melting of network–diluent mixtures	351
7.7	Fibrous proteins	354
	References	355
8	Oriented crystallization and contractility	357
8.1	Introduction	357
8.2	One-component systems subject to a tensile force	360
8.3	Multicomponent systems subject to a tensile force	381
8.4	Oriented crystallization and contractility in the absence of tension	389
8.5	Contractility in the fibrous proteins	395
8.6	Mechanochemistry	403
	References	408
	<i>Author index</i>	411
	<i>Subject index</i>	426

Contents

vii

Volume 2	
<i>Preface</i>	page xi
9 Crystallization kinetics of homopolymers: bulk crystallization	1
9.1 Introduction	1
9.2 General experimental observations	5
9.3 Mathematical formulation	11
9.4 Comparison of theory with experiment: overall crystallization	27
9.5 Further theoretical developments: overall crystallization	43
9.6 Further experimental results: overall crystallization	52
9.7 Nonisothermal crystallization	60
9.8 Spherulite initiation and growth: general concepts	65
9.9 Nucleation theory: temperature coefficient in vicinity of T_m^0	67
9.10 Analysis of experimental data in vicinity of T_m^0	101
9.11 Kinetics over an extended temperature range	122
9.12 Homogeneous nucleation and interfacial free energies	142
9.13 Nucleation catalysts	154
9.14 Influence of molecular weight	163
9.15 Epilogue	203
References	204
10 Crystallization kinetics of copolymers	215
10.1 Introduction	215
10.2 Random type copolymers	215
10.3 Block or ordered copolymers	251
10.4 Both comonomers crystallize	266
10.5 Long chain branches and covalent cross-links	270
References	248
11 Crystallization kinetics of polymer mixtures	282
11.1 Introduction	282
11.2 Components completely miscible in melt: only one component crystallizes	283
11.3 Miscible blend: both components crystallize	303
11.4 Chemically identical components	311
11.5 Partially miscible blends	324
11.6 Blend with two completely immiscible components	328
11.7 Nonlinear growth and diffusion	336
References	344
12 Crystallization under applied force	348
12.1 Introduction	348
12.2 Effect of hydrostatic pressure	348

Leo Mandelkern

Table of Contents

[More information](#)

viii	<i>Contents</i>	
12.3	Crystallization kinetics under uniaxial deformation	363
12.4	Crystallization kinetics under biaxial deformation and under shear	371
	References	377
13	Polymer–diluent mixtures	380
13.1	High molecular weight <i>n</i> -alkanes	380
13.2	Crystallization from dilute and moderately dilute solutions	391
13.3	Temperature dependence: crystallization from dilute solution	414
13.4	Crystallization from concentrated mixtures	416
13.5	Solvent induced crystallization	423
	References	428
	<i>Author index</i>	433
	<i>Subject index</i>	455
