<i>Preface</i>	<i>page</i> xi
<i>List of journal abbreviations</i>	xiii
Part I Foundations of electronic and photoelectron spectroscopy	1
1 Introduction	3
1.1 The basics	3
1.2 Information obtained from electronic and photoelectron spectra	5
2 Electronic structure	7
2.1 Orbitals: quantum mechanical background	7
References	11
3 Angular momentum in spectroscopy	12
4 Classification of electronic states	15
4.1 Atoms	15
4.2 Molecules	17
References	23
5 Molecular vibrations	24
5.1 Diatomic molecules	24
5.2 Polyatomic molecules	31
References	39
6 Molecular rotations	40
6.1 Diatomic molecules	40
6.2 Polyatomic molecules	43
7 Transition probabilities	51
7.1 Transition moments	51
7.2 Factorization of the transition moment	56
References	64

vi Contents

Part II Experimental techniques	65
8 The sample	67
8.1 Thermal sources	67
8.2 Supersonic jets	68
8.3 Matrix isolation	72
References	74
9 Broadening of spectroscopic lines	75
9.1 Natural broadening	75
9.2 Doppler broadening	76
9.3 Pressure broadening	77
10 Lasers	78
10.1 Properties	78
10.2 Basic principles	79
10.3 Ion lasers	81
10.4 Nd:YAG laser	81
10.5 Excimer laser	82
10.6 Dye lasers	83
10.7 Titanium:sapphire laser	85
10.8 Optical parametric oscillators	86
References	86
11 Optical spectroscopy	87
11.1 Conventional absorption/emission spectroscopy	87
11.2 Laser-induced fluorescence (LIF) spectroscopy	89
11.3 Cavity ringdown (CRD) laser absorption spectroscopy	92
11.4 Resonance-enhanced multiphoton ionization (REMPI) spectroscopy	94
11.5 Double-resonance spectroscopy	96
11.6 Fourier transform (FT) spectroscopy	97
References	101
12 Photoelectron spectroscopy	102
12.1 Conventional ultraviolet photoelectron spectroscopy	102
12.2 Synchrotron radiation in photoelectron spectroscopy	105
12.3 Negative ion photoelectron spectroscopy	105
12.4 Penning ionization electron spectroscopy	107
12.5 Zero electron kinetic energy (ZEKE) spectroscopy	107
12.6 ZEKE–PFI spectroscopy	110
Reference	110
Further reading	110

Contents	vii
Part III Case Studies	111
13 Ultraviolet photoelectron spectrum of CO	113
13.1 Electronic structures of CO and CO ⁺	113
13.2 First photoelectron band system	115
13.3 Second photoelectron band system	115
13.4 Third photoelectron band system	116
13.5 Adiabatic and vertical ionization energies	116
13.6 Intensities of photoelectron band systems	117
13.7 Determining bond lengths from Franck–Condon factor calculations	118
References	119
14 Photoelectron spectra of CO₂, OCS, and CS₂ in a molecular beam	120
14.1 First photoelectron band system	123
14.2 Second photoelectron band system	125
14.3 Third and fourth photoelectron band systems	126
14.4 Electronic structures: constructing an MO diagram from photoelectron spectra	126
References	128
15 Photoelectron spectrum of NO₂⁻	129
15.1 The experiment	129
15.2 Vibrational structure	130
15.3 Vibrational constants	132
15.4 Structure determination	132
15.5 Electron affinity and thermodynamic parameters	134
15.6 Electronic structure	134
References	137
16 Laser-induced fluorescence spectroscopy of C₃: rotational structure in the 300 nm system	138
16.1 Electronic structure and selection rules	138
16.2 Assignment and analysis of the rotational structure	141
16.3 Band head formation	143
References	143
17 Photoionization spectrum of diphenylamine: an unusual illustration of the Franck–Condon principle	144
References	149
18 Vibrational structure in the electronic spectrum of 1,4-benzodioxan: assignment of low frequency modes	150
18.1 <i>Ab initio</i> calculations	152
18.2 Assigning the spectra	152
References	156

viii Contents

19	Vibrationally resolved ultraviolet spectroscopy of propynal	157
	19.1 Electronic states	159
	19.2 Assigning the vibrational structure	159
	19.3 LIF spectroscopy of jet-cooled propynal	161
	References	164
20	Rotationally resolved laser excitation spectrum of propynal	165
	20.1 Assigning the rotational structure	165
	20.2 Perpendicular versus parallel character	167
	20.3 Rotational constants	168
	20.4 Effects of asymmetry	168
	References	170
21	ZEKE spectroscopy of Al(H₂O) and Al(D₂O)	171
	21.1 Experimental details	172
	21.2 Assignment of the vibrationally resolved spectrum	172
	21.3 Dissociation energies	175
	21.4 Rotational structure	177
	21.5 Bonding in Al(H ₂ O)	178
	References	179
22	Rotationally resolved electronic spectroscopy of the NO free radical	180
	References	186
23	Vibrationally resolved spectroscopy of Mg⁺-rare gas complexes	187
	23.1 Experimental details	188
	23.2 Preliminaries: electronic states	189
	23.3 Photodissociation spectra	190
	23.4 Spin-orbit coupling	190
	23.5 Vibrational assignment	193
	23.6 Vibrational frequencies	194
	23.7 Dissociation energies	195
	23.8 <i>B-X</i> system	196
	References	196
24	Rotationally resolved spectroscopy of Mg⁺-rare gas complexes	197
	24.1 <i>X</i> ² Σ^+ state	197
	24.2 <i>A</i> ² Π state	199
	24.3 Transition energies and selection rules	200
	24.4 Photodissociation spectra of Mg ⁺ -Ne and Mg ⁺ -Ar	201
	References	204

Contents	ix
25 Vibronic coupling in benzene	205
25.1 The Herzberg–Teller effect	208
References	209
26 REMPI spectroscopy of chlorobenzene	210
26.1 Experimental details and spectrum	211
26.2 Assignment	212
References	215
27 Spectroscopy of the chlorobenzene cation	216
27.1 The \tilde{X}^2B_1 state	216
27.2 The \tilde{B} state	221
References	222
28 Cavity ringdown spectroscopy of the $a^1\Delta \leftarrow X^3\Sigma_g^-$ transition in O₂	223
28.1 Experimental	223
28.2 Electronic states of O ₂	225
28.3 Rotational energy levels	226
28.4 Nuclear spin statistics	227
28.5 Spectrum assignment	228
28.6 Why is this strongly forbidden transition observed?	229
References	229
Appendix A Units in spectroscopy	230
A.1 Some fundamental constants and useful unit conversions	231
Appendix B Electronic structure calculations	232
B.1 Preliminaries	232
B.2 Hartree–Fock method	234
B.3 Semiempirical methods	237
B.4 Beyond the Hartree–Fock method: allowing for electron correlation	238
B.5 Density functional theory (DFT)	239
B.6 Software packages	240
B.7 Calculation of molecular properties	240
References	242
Further reading	242
Appendix C Coupling of angular momenta: electronic states	243
C.1 Coupling in the general case: the basics	244
C.2 Coupling of angular momenta in atoms	244
C.3 Coupling of electronic angular momenta in linear molecules	246
C.4 Non-linear molecules	248
Further reading	248

Cambridge University Press

0521817374 - Electronic and Photoelectron Spectroscopy: Fundamentals and Case Studies

Andrew M. Ellis, Miklos Feher and Timothy G. Wright

Table of Contents

[More information](#)

x	Contents	
	Appendix D The principles of point group symmetry and group theory	249
	D.1 Symmetry elements and operations	249
	D.2 Point groups	251
	D.3 Classes and multiplication tables	252
	D.4 The matrix representation of symmetry operations	254
	D.5 Character tables	256
	D.6 Reducible representations, direct products, and direct product tables	257
	D.7 Cyclic and linear groups	259
	D.8 Symmetrized and antisymmetrized products	261
	Further reading	261
	Selected character tables	262
	Appendix E More on electronic configurations and electronic states: degenerate orbitals and the Pauli principle	266
	E.1 Atoms	266
	E.2 Molecules	268
	Appendix F Nuclear spin statistics	269
	F.1 Fermionic nuclei	270
	F.2 Bosonic nuclei	270
	Appendix G Coupling of angular momenta: Hund's coupling cases	272
	G.1 Hund's case (a)	272
	G.2 Hund's case (b)	274
	G.3 Other Hund's coupling cases	276
	Further reading	276
	Appendix H Computational simulation and analysis of rotational structure	277
	H.1 Calculating rotational energy levels	277
	H.2 Calculating transition intensities	279
	H.3 Determining spectroscopic constants	279
	References	280
	Further reading	281
	<i>Index</i>	282
