## Subject index

- ACK theory 4, 58, 199  
 Acoustic emission 181, 253
- Characteristic damage state (CDS) 47, 48, 188  
 Classical laminate plate theory (CLPT) 24  
 COD based methods 206  
 Complementary energy 12, 92, 93, 94, 101, 203, 227  
 Computational methods 119  
 Computational structural analysis 276  
 Constitutive relations/Constitutive response/  
 Constitutive relationships/Constitutive  
 equations 11–15, 20, 26, 172  
 Constraint factor. *See* Constraint parameter  
 Constraint parameter 148, 155, 163, 165, 169,  
 174, 287  
 Constraint. *See* ply constraint  
 Continuum damage mechanics (CDM) 4, 57, 134,  
 137, 144, 154, 161, 174, 176  
 Correspondence Principle 172  
 Cost-effective manufacturing 288  
 Crack density 86, 173, 192, 202, 208, 214, 266,  
 270  
   Normalized crack density 201  
 Crack density evolution. *See* damage progression  
 Crack initiation 180, 185, 201, 273, 276, 278  
 Crack initiation strain 198, 205, 221  
 Crack opening displacement (COD) 2, 3, 32, 102,  
 111, 117, 155, 161, 163, 164, 174, 181, 207,  
 219  
 Crack progression. *See* Damage progression  
 Crack sliding displacement (CSD) 3, 143,  
 219  
 Crack spacing 148, 195  
   Normalized crack spacing 203  
 Crack size 148  
 Critical energy release rate. *See* energy release  
 rate: critical  
 Cyclic loading. *See* Fatigue
- Damage 36  
 Damage characterization 139  
 Damage development. *See* damage progression  
 Damage entity tensor 141
- Damage evolution. *See* damage progression  
 Damage evolution curve. *See* damage progression  
 curve  
 Damage initiation. *See* Crack initiation  
 Damage mechanics 2, 33, 36, 48, 50, 57, 276, 280,  
 290  
 Damage mechanisms 36, 37, 142, 143, 181,  
 242, 278  
 Damage modes 45, 46, 142–143, 156, 158, 165,  
 167, 175, 179, 193  
 Damage mode tensor 142–143, 158  
 Damage progression 46, 139, 179, 180, 184, 187,  
 188, 192, 194, 196, 204, 208, 212, 215, 217,  
 221, 222, 229, 253, 266, 268, 270, 273, 276,  
 283, 284, 294  
   Curve 189, 190  
   Energy based approaches 198, 210, 277  
   Strength based approaches 180, 194, 210  
 Damage state 173  
 Damage tensor 151, 157  
 Damage tolerance 265  
 Debonding (interfacial) 37–38, 48, 248, 249, 251,  
 256, 283, 284, 287  
 Defect damage mechanics 287, 291, 297  
 Delamination 33, 39–41, 48, 183, 187, 193, 216,  
 225, 260, 271, 273, 287  
 Distortional energy (Tsai-Hill) criterion 23  
 Durability 1, 37, 265, 279, 287  
   Assessment 277
- Edge replication 181  
 Energy release rate 31, 203, 204, 208, 294  
   Critical 31, 206, 213, 219
- Failure 36  
 Failure criteria 21, 180  
 Fatigue 223, 265, 276  
 Fatigue-life 246, 271  
 Fatigue-life prediction 265–271  
   Crossply laminates 266–270, 273  
   General laminates 273  
 Fatigue-life diagrams 6–7, 237–265, 273  
   Polymer matrix composites (PMC) 242, 250,  
 251, 283

- Fatigue-life diagrams (cont.)  
 Angleply laminates 260, 261  
 Ceramic matrix composites (CMC) 252  
 Crossply laminates 261–262  
 Metal matrix composites (MMC) 250, 251  
 Multidirectional laminates 263  
 Quasi-isotropic laminates 263  
 Unidirectional composite 257
- Fatigue limit 237
- Fiber breakage 42, 48, 183, 239, 249, 255
- Fiber failure. See fiber breakage
- Fiber microbuckling 42, 43
- Finite element method (FEM) 117, 119, 209, 276
- Finite strip method 121
- Fracture 36, 48
- Frictional sliding 256, 268 See also Interfacial sliding
- Generalized Hooke's law 12
- Generalized plain strain analysis 104, 205
- Hashin criterion 23
- Interfacial sliding 39, 41
- Interlaminar cracking. See delamination
- Intralaminar cracking. See ply cracking
- Laminate 18  
 Balanced 29  
 Crossply 29, 285  
 Multidirectional 193, 217  
 Quasi-isotropic 29, 193  
 Symmetric 29
