## Subject index

- addition polymerization 41
- amorphous silicon 30
  - structure of 30–35
- Angell plot for viscosities of liquids 15, 16
  - fragile liquids 14
  - strong liquids 14
- associated flow rule 85
  - normality of flow in 85
- atactic molecules 46
- atomic environments 12–14
  - liquid-like 13
  - solid-like 13
  - short-to-medium-range order in 4–6
- atomic mobility in glass-forming liquids 10–12
- atomic site stress tensor 7, 8
  
- brittleness of glassy homo-polymers 416
  - alleviation with craze plasticity 443
- brittle-to-ductile transition in fracture 418
- bulk metallic glasses 30
  - crystallization in 26
  
- cavitation in glassy polymers 345
  - simulation in polypropylene 345
- chain-extended polyethylene 71
- chain folding in crystallization 59–61
  - adjacent reentry 63–65
  - random reentry 63–65
- chain defects 67, 68
- chemical structure of polymers 42, 43, 44, 45
  - oxydiphenyl, DFO 44
  - polyamide (nylon), PA 43
  - polybutadiene, PB 43, 152
  - polycarbonate, PC 43
  - polychloroprene 152
  - polyethylene, PE 42
  - polyester, PET (polyethylene terephthalate) 43
  - polymethyl methacrylate, PMMA 42
  - polyimide, PIM 44
  - polyisoprene, PI 153
  - polypropylene, PP 42
  - polystyrene, PS 42
  - polyvinyl chloride, PVC 42
  - pyromellitic acid, PM 44
  - resorcinol, R-R 44
- compliant particles (in toughening of polymers) 440
  - craze initiation from 449
  - elasticity of 447
  - high-impact polystyrene, HIPS 440
  - particle-size effect in toughening 449–451
  - stress-induced displacement misfit 451
- condensation polymerization 42
- conformation 46
- configuration 46
- constitutive relations of stress–strain–strain rate 333, 334
- Coulomb–Mohr yield criterion 213, 215
- crack advance 414
  - resistance to 414, 415
  - stability in 414
- crack tips 392–414
  - cohesive zone line model in SSY 402
  - pervasiveness of plasticity at 398
  - plane strain 399–402
  - plane stress 399–402
  - plastic zones at 398–399
  - with contained plasticity 404
  - with fully developed plasticity 407
  - with small-scale yielding, SSY 399
- cracks and fracture 391–414
  - cohesive separation at crack tips 420
  - at high strain rate 431
  - in impact fracture 429–431
  - in linear elastic fracture mechanics, LEFM 392–398
- craze initiation 347
  - experimental observations 347
  - in tension–torsion experiments 349
  - model 353
- craze growth 347–353
  - in diblock copolymers 378
  - in glassy homo-polymers 368–371
  - model in diblocks 381
  - model in homo-polymers 368–374

- craze microstructure 364  
 in diblock copolymers 378–381  
 in glassy homo-polymers 364–366
- crazing 342–376  
 in diblock copolymers 376–381  
 in glassy homo-polymers 343–345  
 intrinsic, in glassy PS 349
- critical resolved shear stress for plastic flow in  
 crystalline lamellae 294, 295  
 in HDPE 294  
 in Nylon-6 296
- crystal symmetry 93, 94
- crystalline polymers 54  
 fringed-micelle model 55  
 lamellar crystallites 58  
 morphology of spherulitic PE 63–65
- crystallization in BMGs 26, 27
- deformation instabilities in extensional plastic  
 flow 325–336  
 impending localization conditions in shear 326  
 impending localization in tension 328  
 plastic drawing of polymers 336  
 post-necking behavior 329  
 onset of necking (Considere criterion) 328  
 stability in extensional flow 331  
 uniform extension strain 330
- degree of polymerization 48
- deviatoric stress and strain 81, 82
- diblock copolymers 376
- diluent-assisted craze growth 473, 474
- Diluent-induced toughening in glassy polymers  
 459–465  
 comparison of model with experiments 472  
 model 465
- dislocation nucleation in crystalline lamellae 295–301  
 activation volume 304  
 edge half loop from face 300  
 monolithic screw from edge 298  
 screw half loop from edge 300
- Doolittle viscosity 11
- dynamic relaxation modulus 117  
 effect of physical aging on 130, 131
- eight-chain model of rubber elasticity 162–164
- elastic constants 93, 94  
 heterogeneous polymers 104, 105  
 oriented polymers 99, 102  
 pressure dependence of 85  
 stress (large elastic strain) dependence of 95  
 temperature dependence of 95, 98
- energy elasticity 80
- entropy elasticity 80
- equilibrium equations 78
- Eshelby inclusion method for elastic constants in  
 heterogeneous polymers 106
- Eshelby theory of shear transformations 179–181
- flow state 221
- fracture in crazes 422
- fracture of polymers 391–419  
 at impact strain rates 429  
 chain scission in 419, 425–428  
 cohesive separation at crack tip 420  
 forms and mechanisms 419–425  
 in highly textured fibers and bars 425–428  
 molecular-scission-controlled 425  
 of oriented polymers 425
- fracture toughness of a selection of polymers  
 428
- free volume 7, 18
- Gaussian statistics in rubber elasticity 155
- $G_{IC}$  critical energy release rate 414
- glass-forming liquids 14  
 atomic mobility in 14, 15  
 viscosity at the melting point 6
- glass transition 16–20  
 percolation model of liquid-like environments  
 19  
 Williams, Landel, and Ferry model 125, 126
- glass-transition temperature 8  
 dependence on rate of cooling 25
- glassy metal alloys 30  
 kinetics of large-strain plastic flow at  
 $T \ll T_g$  205  
 kinetics of large-strain plastic flow close  
 to  $T_g$  207  
 shear localization in 216–219  
 strain softening in 205–207  
 strain hardening in 207  
 universal temperature dependence of yield  
 stress in 245
- glassy polymers 49–52  
 aging in 131  
 crazing in 342–376  
 computational models of structure of structure  
 of 49–53  
 polycarbonate 50  
 polypropylene 49–51  
 polystyrene 50  
 polyvinylchloride 50
- dilatant plasticity in 254–256  
 mechanisms of plasticity in 234  
 multi-axial plastic flow in 262, 266  
 orientation hardening in 259–261  
 plastic flow at temperatures  $T \ll T_g$   
 249–258  
 plastic flow near  $T_g$  266–268  
 plasticity of 228–243  
 simulation of plasticity in PC 238–242  
 simulation of plasticity in PP 232–238  
 strain softening in 254–257  
 strength differential effect in yielding of 259  
 structure of 49–51

- hedrites 58
- heterogeneous polymers 376–378  
 diblock copolymers 376  
 elasticity in 104  
 estimation of elastic constants in 104  
 Eshelby inclusion method 106  
 self-consistent method 105
- high-impact polystyrene, HIPS 440
- Hooke's law in elasticity 91
- intrinsic brittleness of polymers 416
- intrinsic crazing in glassy polymers 416, 418  
 in PC 349  
 in PS 349
- intrinsic toughness vs. brittleness 416–418
- isotactic polymers 46
- $J$  linear viscoelasticity compliance function 114
- $J_I$  integral, characterizing crack-tip fields in  
 mode I 405–406
- $J_{IC}$  critical stress intensity of crack-tip field at  
 impending fracture 404–407
- kinetics of rate dependence  
 Doolittle viscosity 11  
 Kohlrausch–Williams–Watts 22, 23  
 of structural relaxations 20, 21  
 Vogel–Fulcher–Tammann viscosity 11, 125  
 Williams, Landel, and Ferry 125, 126
- kinetics of yielding at low temperatures  $T \ll T_g$  in  
 metallic glasses 187–205  
 of large-strain plastic flow in metallic glasses at  
 $T \ll T_g$  205–209
- kinetics of yielding near  $T_g$  in metallic glasses 193–199  
 of large-strain plastic flow in metallic glasses  
 near  $T_g$  207
- Kohlrausch–Williams–Watts kinetics 22, 23
- lamellar single crystals of PE 58–60
- Langvin statistics of rubber elasticity 161
- linear elasticity 81
- linear viscoelasticity 112–120  
 creep compliance function 114  
 dynamic modulus 117  
 dynamic modulus of PMMA over the range  
 40–155°C 120–122  
 loss modulus 117  
 loss tangent 118  
 relaxation modulus 115  
 shift factor 122, 123  
 storage compliance 117  
 storage modulus 117  
 $\tan \delta$  118  
 uniaxial creep 114
- macromolecule 41
- metallic glasses 3–10  
 atomic packing in 3, 4  
 glass formability in 3  
 short to medium range order in 5  
 von Mises yield condition 83, 85  
 yielding in at  $T \ll T_g$  187  
 yielding in at  $T$  near  $T_g$  189
- micronecking 275
- molecular alignment in plastic flow of HDPE  
 280–289  
 in amorphous component of HDPE 289  
 in glassy polymers 264
- molecular weight 47  
 entanglement molecular weight in rubbers 158  
 number-average molecular weight 48  
 weight-average molecular weight 48
- monomer dimensions of polymers 42–44
- non-linear viscoelasticity 145
- normality condition of plastic yielding 85
- plane-strain flow 399, 400
- plane-stress flow 399, 400
- plane-strain compression flow in channel die  
 280–293  
 HDPE 280  
 Nylon-6 291
- plastic shear rate 186
- plastic-strain-induced change in structure 199–205
- plastic yield conditions 83  
 Coulomb–Mohr 213, 215  
 von Mises 83
- Plasticity of  
 amorphous silicon 199, 200  
 computer modeling 234–243  
 glassy polymers 234–242  
 semi-crystalline polymers 309–321
- metallic glasses 175  
 onset of 234, 273  
 semi-crystalline polymers 273
- polymer single crystals 58  
 defects in 57  
 chain folds 67  
 dislocations 71  
 dispirations 68
- polymer nomenclature 41, 48  
 configuration 46  
 conformation 46  
 macromolecule 41  
 molecular weight 47  
 number average 48  
 weight average 48  
 polymerization 41  
 addition 41  
 condensation 41  
 degree of 48  
 rotational isomerism in macromolecules 50
- principle of maximum plastic resistance in plastic  
 flow 85

- rubber elasticity 148–155
- rubbers 149–151
  - chemical constitution of 152
  - configurational relaxation in 160
  - cross linking in 149
  - eight-chain model of rubbery large-strain response 161–164
  - Gaussian statistical model 155
  - Langevin statistical model 159–161
  - molecular characteristics of 149
  - molecular entanglements in 172
  - thermodynamics of 151
- rubbery shear modulus 170
- secondary relaxations 132–139
  - carbonate-group rearrangements in PC 136–138
  - isopropylidene-group rearrangements in PC 139
  - phenylene flips in PC 133
- self-consistent method for estimating elastic properties of hetero-polymers 105, 106
- self-organized criticality in triggering avalanches of flow 185
- shear activation volume 246
- shear localization 216, 218
  - in glassy metals 216
  - in glassy polymers 216
  - role of dilatancy in 217
  - temperature rise in 220
- shear relaxations in polymers 126–132
  - $\alpha$ -relaxations 126
  - $\beta$ -relaxations 127
- shear transformations 176
  - Eshelby theory of formation of 179, 180
  - Gibbs free energy of formation of 180
  - in glassy polymers 243, 247
  - interaction energy with stress 180
  - metallic glasses 188
  - nucleation under stress 185, 186
    - as plasticity carriers in amorphous solids 176
  - self-energy, Helmholtz 179–181
  - triggering under stress 180
- short-to-medium-range atomic order in metallic glasses 4–6
- simulation of large-strain texture formation 309–321
- small-angle neutron scattering, SANS 64
- small-angle X-ray scattering, SAXS 281, 283
- small-strain elasticity 91
- spherulites 55–57
  - Hoffman–Lauritzen model of growth 63–65
  - growth of crystalline lamellae in 63–65
- strains 78–81
  - compatibility equations for strain 80
  - deviatoric strains 81
  - dilatation 80
  - extension ratios 81
  - finite strains 80
  - infinitesimal strains 91
  - logarithmic strains 81
  - matrix 79
  - pure shear 168
  - simple shear 168
  - tangential shear strains 80
  - tensor shear strains 80
  - uniform extension strain 329
- strain hardening in glassy polymers 262
- strain softening in glassy polymers 256, 257
- strength differential effect 213
- stress 77, 78
  - deviatoric stresses 81
  - equilibrium equations 78
  - in Cartesian coordinates 77, 78
  - in polar coordinates 78
  - matrix 77, 78
  - mean normal stress (negative pressure) 78
  - nominal stress 167
  - true stress 167
- structure
  - amorphous silicon 30
  - craze microstructure 364
  - glassy polymers 49–51
    - computer-generated structures of PP and PC 49, 50
  - metallic glasses 3–7
  - polymer single crystals 58, 59
  - spherulites 55–58
  - semi-crystalline polyamide, Nylon-6 277, 279
  - semi-crystalline polyethylene 61–66
- structural rejuvenation in plastic flow 256
- structural relaxations 16
  - computational model 16–19
  - distributed character of 21–25
  - kinetic model in metallic glasses 20–21
- syndiotactic polymer molecules 46
- tacticity 46, 47
  - atactic polymers 46
  - isotactic polymers 46
  - syndiotactic polymers 46
- temperature dependence of plastic resistance 188, 307
  - in glassy polymers 187
  - in semi-crystalline polymers 307
- temperature dependence of flow stress in metglasses near  $T_g$  189
- universal temperature dependence of flow stress in metallic glasses 188
- textured semi-crystalline polymers 309
  - crystallographic texture 309
  - macromolecular texture 309
  - morphological texture 309
- thermally activated deformation 87
- thermoplastic polymers 45

- thermosetting polymers 45
- toughening mechanisms of brittle polymers 440–500
  - general toughening strategy by lowering plastic resistance 438
  - modification with compliant particles 445–449
  - toughening of crazable polymers, HIPS 445
  - toughening by plasticizing diluents 459
  - toughening of semi-crystalline polymers 477–491
  - toughening of thermosetting epoxy resins, DGEBA 492
- TTT diagrams 6
- universal binding-energy relation, UBER 95
- universal temperature dependence of plastic yielding in metglasses at  $T \ll T_g$  188
- vinyl polymers 42
- viscosity of glass-forming liquids 14, 15
- Vitreloy 1 6
- Vitreloy 4 15, 192
- Vitreloy 106 27
- Vogel–Fulcher–Tammann viscosity relation 11, 125
- Williams, Landel, and Ferry model of glass transition 125, 126
  - WLF equation 126
- Williams–Watts, stretched exponential kinetics 22, 23
- yield conditions for plasticity 83–85
  - Coulomb–Mohr yield condition 83
  - von Mises yield condition 83
- yielding in glassy metals 185
