## Subject index

Page numbers in boldface refer to more-thorough discussion

- activated complex 28; *see also* transition-state
- activation
  - energy 124, **129**, 169
    - as best estimate of critical energy 145
    - effect of tunneling 180
    - fall-off 129, 165
    - high-/low-pressure difference 169
  - enthalpy 130
  - entropy 130
- A-factor, *see* pre-exponential factor
- Airy function 183
- ammonia, inversion of 178
- angular momentum 193, **215**
  - compounding of 216
  - conservation 193, 215
    - effect of 251
  - intrinsic, of fragments 215
  - $J = 0$ , significance of 226, 251
  - orbital **212**, 260
    - angular dependence 268
    - vector addition of 218, 274
- anharmonicity 39, 40, 68, 88
- asymmetric top 282
- Arrhenius rate constant 12, 124, 129, 144
- average
  - frequency 10
  - lifetime 7, 9
  - of vector sum 274
  - rate constant 18, **34**
- Badger's rule 197
- barrier
  - absorbing 118, 137
  - centrifugal 37, 43, 193, **212**, 215, 228, 249
  - Eckart **172**
  - hindering 191
  - parabolic 175
    - Laplace transform of 179
    - tunneling probability 173
  - rotational **43**
- Bessel function 25
  - modified 73
- beta function **303**
- Beyer–Swinehart algorithm 85
- BIRD (black-body infrared-radiation dissociation) 163
- Boltzmann
  - equilibrium distribution 12, 108, 114, 115, 152, 155, 164
    - fraction of oscillators 12
- bottleneck, intramolecular 51
- branching ratio 249
- bulk properties **120**
- butene ion, fragmentation channels 48, 248
- canonical ensemble 25, **82**, 246
  - fluctuation of energy 83
- centrifugal correction factor **156**
  - interpolation between high and low pressure 159
  - variational 202
- chemical activation **148**, 248
  - distribution function 151, 170
  - examples 152
  - reaction efficiency 149
  - steady-state sink method 150
  - strong-collision solution 150
- collision
  - cross-section 113, 289
  - efficiency **131**, 296
    - as re-scaling 131
    - as energy transferred per collision 132
  - frequency **112**
  - integral 289
  - number  $Z$  113, **289**
  - probability of 10
  - weak 131
- collisional relaxation 106
- complex bond breaking 37
- conjugate momentum 27

- conservation  
 of constants of motion 212  
 of probability 117
- convolution **63**, 74, 176, 185, 227, 228, 238, 250  
 for angular-momentum-conserved vib-rot sum  
 228  
 for internal-“external” states 250
- integrals  
 for vib-rot sum of states 89  
 interpolation for arbitrary  $J$  238  
 reduction of **237**
- Coriolis coupling 38, 50
- counting of states 35, 84
- critical  
 configuration **28**  
 energy 17, 43  
 as perfect sink 125  
 impact parameter 113, 260, 289  
 oscillator 4, 6, 10  
 rate of decay 14  
 threshold 6
- cross-section versus sum of states 210
- cumulative reaction probability 36
- cut-off, in  $L$ - $J_r$  space  
 horizontal 218, 221, 227, 260  
 vertical 218, 221, 226
- Dawson’s integral 95, **282**
- de-activation by collision 12
- de Broglie wavelength 209, 210
- decomposition, probability of 7
- degrees of freedom  
 external 26, 209  
 internal 26  
 pertinent 38  
 semi-classical **276**
- delta function 32, 255, **287**
- density of states 39, **57**  
 as derivative of  $\Gamma(y, J)$  262  
 classical approximation 15  
 “exact” 58  
 in  $J_r$ - $L$  space 254  
 of free rotors **64**, 279  
 of hindered rotors **69**  
 second integral of 62  
 thermodynamic version 82
- detailed balance 19, 108, 293
- deviation from equilibrium, correction factor for 165,  
 295
- diffusion tensor 133
- Dirichlet’s integral 277
- dissociation, probability of 5, 11
- down-collision 111
- drift vector 133
- effective  
 mass, in tunneling 173  
 number of oscillators 14  
 potential 42, 193, **212**, 265, **267**  
 angle- and distance-dependent 267  
 angle-averaged 269  
 for polyatomic fragments 272  
 Lennard-Jones 44, **288**, **291**  
 maximum of 213  
 Morse 193, **290**  
 zero-point-corrected **196**  
 threshold 170, **296**
- eigenvalue equation 116, 169
- eigenvalue-eigenfunction expansion **115**,  
 293
- electronic degeneracy 86, 246
- elliptic integral 74, 275
- energy diffusion 134
- energy levels, broadening of 34
- ensemble average 29
- entrance channel 41, 265
- equilibrium constant 126, 145, 202, 246
- error function 101, 237, 240, 281, **282**
- ethane, fragmentation of 41, 42, 106, 126
- ethylene ion 248
- exact enumeration of states 59, 67, 85
- exit channel 41, **265**
- exponential  
 decay 119  
 time dependence 7  
 transition probability 108, 132, 294
- external  
 energy 211, **216**  
 conservation of 216  
 rotations 41  
 states **211**  
 density of 211, 253  
 sum of 211, 219, **250**
- fall-off 14, 22, 128, 132  
 in recombination reactions 128  
 pressure domain of 127
- femtosecond chemistry 50
- fluctuation in rate constant 35
- flux through critical surface 36, **208**  
 minimization of **189**
- Fokker-Planck equation **133**
- force constants 290, 291
- formaldehyde  
 anharmonic count 88  
 tunneling in 177
- fragments  
 approximation for non-linear symmetry  
 229  
 distribution of energy **249**  
 internal-“external” 250  
 translational-rotational **252**
- FT-ICR (Fourier-transform ion cyclotron resonance)  
 163
- gamma  
 distribution 22, 23  
 function 298
- generalized coordinate 27
- HeI<sub>2</sub> 51
- HgI<sub>2</sub> 50

- hindered rotors **69**  
 one-dimensional **72**, 192  
 classical **73**  
 quantum **77**  
 two-dimensional **69**, 191, 205  
 HNCO **270**
- ICN **50**  
 impact parameter **113**, 260  
 incomplete gamma function **23**  
 incubation time **119**, 296  
 in multiphoton dissociation **139**  
 initial transient **122**  
 intramolecular vibrational redistribution (IVR) **29**, 40, 51  
 inverse transform **285**  
 zero-shifted **144**, 145  
 inversion integral **78**  
 ion cyclotron **163**  
 ion–molecule reactions **247**  
 isomerization **37**  
 isotope effect in tunneling **174**
- J*-rotor **66**, 201, **281**  
*J*-shifting approximation **46**, 91, 196  
*J*-states, counting of **218**  
*J<sub>r</sub>*, solution for **261**  
*J<sub>r</sub>*–*L* space, integration in **223**
- K*-rotor **38**, 42, 50, **66**, 93, 193, 195, 243, 269, **281**  
 active **93**, 245  
*J*-restriction in **93**
- Kac formula **25**  
 Kassel rate constant **9**  
 kinetic energy release **49**, 253
- Landau–Zener formula **183**  
 Laplace transform **11**, **61**, **78**, 143, **284**  
 laser experiments **49**  
 Lindemann scheme **12**, 164  
*L*-states, counting of **219**
- master equation **107**, **112**, 164  
 as integral equation **293**  
 discrete form of **114**  
 eigenfunction–eigenvector expansion **115**  
 expansion for weak collisions **133**  
 matrix equivalent **114**  
 non-collisional input **147**, 149  
 similarity transformation **115**  
 solution  
 analytic, at low-pressure limit **293**  
 formal **115**, 116  
 numerical **136**  
 Gauss–Seidel method **142**  
 power method **143**  
 reduced matrix approach **139**  
 steady state **122**  
 low-pressure limit **125**  
 symmetrized **114**, 115  
 transient in **119**  
 two-dimensional  
 reduction of **153**  
 strong-collision version **155**  
 Maxwell–Boltzmann distribution **289**  
 mean first passage time (MFPT) **136**  
 higher moments of **139**
- methane  
 harmonic count in **59**  
 fragmentation **70**, 247, 248, 268, **272**  
 methyl isocyanide, isomerization of **106**, 132  
 methyl-radical recombination **126**, 261  
 microcanonical ensemble **29**, 40, 54, 83  
 microscopic reversibility **36**, 208; *see also* detailed balance
- modes  
 conserved **191**  
 transitional **70**, **190**  
 as hindered rotors **191**  
 molecular parameters, source of **56**  
 moment of inertia **266**  
 orbital **268**  
 angle-dependent **269**  
 for polyatomic fragments **272**  
 principal **266**  
 approximation for **269**  
 tensor **266**  
 eigenvalues of **266**, 274  
 Morse oscillator **68**, **87**  
 multichannel reactions **160**  
 rotational effects **162**  
 strong-collision solution **161**
- NCNO **245**, 268  
 NO<sub>2</sub> **50**, 267  
 non-adiabatic transition **39**, **181**  
 crossing point in **183**  
 Laplace transform of **185**  
 non-random dissociation **21**  
 non-statistical distribution **258**  
 number of states, defined **57**
- oscillator  
 anharmonic **68**, **87**  
 coupled **88**  
 classical **276**  
 Hamiltonian of **53**  
 degenerate **5**  
 harmonic **67**, **85**  
 with cut-off **4**, 17, 54  
 quantum **39**, **85**
- partition function **57**, 87, 195, 240  
 electronic **246**  
*J*-conserved **240**  
 interpolated **241**  
 Laplace transform of **61**  
*r*-dependent **194**  
*r*-interpolated **194**  
 inversion of **195**

- rotational **278**
    - for spherical top **278**
    - for symmetric top **101, 281**
  - translational **280**
  - Pauling's rule **197**
  - PEPICO **48, 49, 248**
  - phase point **27, 29, 31**
  - phase space **27**
    - critical surface **40**
    - dividing surface in **28**
    - surface integral **31**
    - trajectory **27, 30**
    - volume integral **31, 53, 276**
  - phase-space theory **212**
    - rate constant by **243**
  - photoisomerization **106**
  - Pitzer rotor **73, 75**
  - population density
    - steady-state **118**
    - time-dependent **112**
  - potential
    - angle-dependent **268, 270**
      - in ion-molecule reactions **271**
    - angular dependence **269**
    - attractive part of **212, 288**
    - central **42, 207, 265**
    - Eckart **172**
    - Extended Rydberg **194, 290**
    - hindering **70, 72**
    - Lennard-Jones **214, 288**
      - inflection point of **291**
    - Morse **193, 290**
    - non-central **265**
    - parabolic **45, 175**
    - parameters **214**
    - rotational, *see* rotational energy
    - Stockmayer **289**
  - potential energy surface **26**
  - pre-exponential factor **8, 14, 19, 124, 130, 145**
    - as entropy of activation **130**
    - experimental values of **124**
    - in non-adiabatic transition **186**
    - temperature dependent **145**
  - probability  $P(E, z, J)$  **251**

    - classical version **263**
  - QRRK 4**
  - quantization **32**
  - quantized systems **83**
  - quantum states
    - counting of **32**
    - number of **57**
    - per unit energy **33, 57**
  - random dissociation, probability of **23**
  - randomization **8**
    - failure of **51**
  - rate constant (*see also* thermal rate constant)
    - classical **31**
    - effect of tunneling **176**
  - low-pressure limit **118**
  - maximum possible **36**
  - microcanonical **30, 33**
    - by phase-space theory **243**
    - variational equivalent **190**
  - pressure-dependent **13, 19, 122**
  - recombination **125, 246**
  - semi-classical **32**
  - specific-energy **33**
  - time-dependent **15, 117**
  - weak-collision, low-pressure **294**
  - reaction
    - coordinate **167, 18, 27, 30, 40, 194, 265, 269**
      - as bond extension **272**
      - as center-of-mass distance **268**
    - separable **40, 172**
    - translational energy in **31**
  - equilibrium **113**
  - path **30**
    - degeneracy **36**
  - Type 1 **37, 43, 126, 189, 265**
    - barrier for **44, 297**
    - bond-fission **207**
      - variational treatment **189**
    - centrifugal correction for **156**
  - Types 2 and 3 **37, 45**
    - centrifugal correction factor **157**
    - low-pressure **158**
- reactive system
  - loss of probability in **117**
  - temporal evolution of **122**
- recombination reactions **126, 128**
- temperature dependence **203, 247**
- relaxation time **120**
  - in shock tube **295**
- reversible isomerization **117**
- rotational
  - constant **42**
    - effective **230, 272**
    - for orbital motion **268**
    - geometric average **229**
    - reduced **230, 272**
    - spherically averaged **225, 229**
  - energy **42, 218**
  - potential **212**
  - sum of states **64, 277**
    - general formula **279**
- rotations
  - external **41, 216**
  - internal **38**
- RRK 1, 4**
  - rate constant **9**
  - thermal reaction **11**
- RRKM**
  - failure of **51**
  - rate constant **33**
  - trajectory **30**
- saddle point **27, 79**
- scattering matrix **36**
- separatrix **52**

## Subject index

319

- reaction order 127
- rotational effects 153
- thermal system **105**
  - collisional energy transfer in 106
  - model of 106
- Thermochemical Kinetics 131
- threshold rate 36
- time-lag between activation and reaction 12
- transition kernel 114
- transition probability **107**
  - double exponential 109
  - exponential 108, 294
    - moments of 168
  - factorized, vib-rot 153
  - moments of **111**, 132, 133
  - non-adiabatic **182**
    - decay of 183
  - normalization of 107
  - off-set Gaussian 108, 110
  - quasi-diatomic 293
  - rotational, strong-collision form 154
  - Schwartz-Slowsky-Herzfeld (SSH) 110
  - strong-collision 110, 168, 169
  - symmetrization of 114
- transition state **28**, 30, 31, 32, **35**, 40, 50, 192, 194
  - as local minimum in number of states 190
  - as prolate top 38
  - as separated fragments **208**, 211
  - at extremum of effective potential **213**
  - forward/reverse flux in 209
  - loose 130, 199, **207**, 211, 247
  - sum of states, *J*-dependent 211
  - tight 130, 247
  - traditional 207
  - Type 1 130
  - variational 199
  - zeroth-order approximation 41
- transition-state switching 199
- transitional modes **190**
  - in CH<sub>4</sub> fragmentation 70
  - zero-point energy 196
