List of contributors	page xvi
Preface	xix
Prologue	
<i>The editors</i>	I
PART I History	7
I History of astrobiological ideas	
<i>Woodruff T. Sullivan, III & Diane Carney</i>	9
I.1 Overview	9
I.2 Peopled worlds in antiquity and the Middle Ages	10
I.3 Copernicanism: Earth is a planet	11
I.4 Plurality of worlds: Fontenelle and his <i>Conversations</i> (1686)	12
I.5 Natural theology	15
I.6 Two nineteenth-century revolutions	16
I.7 Enter Mars	19
I.8 Ideas on extraterrestrial life, 1900–60	26
I.9 The beginning of SETI	30
I.10 Introduction to the history of ideas on the origin of life	33
I.11 Early ideas on spontaneous generation of life	34
I.12 The seventeenth- and eighteenth-century spontaneous generation debate	35
I.13 Pasteur vs. Pouchet: relegation of life's origin to the past	37
I.14 Oparin and Haldane: origin of life as the domain of chemistry and physics	39
I.15 An early twenty-first-century approach to the origin of life	42
I.16 Conclusion	43
References	44
Further reading and surfing	45
2 From exobiology to astrobiology	
<i>Steven J. Dick</i>	46
2.1 Cosmic evolution as a context for exobiology	46
2.2 The conceptual formation of exobiology	47
2.3 A new discipline	58
2.4 The broader significance of astrobiology	60
References	62
Further reading and surfing	64

viii Contents

PART II The origin of Earth-like planets and atmospheres	67
3 Formation of Earth-like habitable planets	
<i>Donald E. Brownlee & Monika E. Kress</i>	69
3.1 Introduction	69
3.2 Habitable bodies for microbial life	69
3.3 Habitable zones for Earth-like planets	70
3.4 Other factors in habitability	72
3.5 Other planetary systems	74
3.6 Star formation	75
3.7 Building materials: element abundances	76
3.8 Organic compounds before Earth formed	78
3.9 Formation of planets	82
3.10 Comments and conclusions	88
References	89
Further reading and surfing	90
4 Planetary atmospheres and life	
<i>David Catling & James F. Kasting</i>	91
4.1 Fundamentals of global climate	91
4.2 The faint young Sun problem	93
4.3 The coevolution of atmospheric oxygen and life	99
4.4 The prebiotic atmosphere	101
4.5 Effects of primitive life on the atmosphere	104
4.6 Geological evidence for the rise of oxygen	106
4.7 Models for the Earth's atmospheric O ₂ history	109
4.8 Formation of an ozone ultraviolet shield	111
4.9 Advanced life and O ₂ on other Earth-like planets	111
4.10 Summary and conclusions	113
References	114
Further reading	116
PART III The origin of life on Earth	117
5 Does 'life' have a definition?	
<i>Carol E. Cleland & Christopher F. Chyba</i>	119
5.1 Introduction	119
5.2 Attempts to define 'life'	119
5.3 Definitions	121
5.4 Natural kinds and theoretical identity statements	123
5.5 What is 'life'?	125
Appendix 5.1 Locke's theory of meaning	127
Appendix 5.2 John Locke and Thomas Kuhn	128
Appendix 5.3 A new theory of meaning	128
References	129
Further reading and surfing	131
6 Origin of life: the crucial issues	
<i>Robert Shapiro</i>	132
6.1 Why is this question important?	132
6.2 Historical background	134

Contents	ix
6.3 The architecture of life	137
6.4 Central ideas about the origin of life	140
6.5 Replicator-first theories: life began with the random formation of a self-copying molecule	143
6.6 Pre-RNA World: another replicator preceded RNA as the genetic material	147
6.7 Metabolism-first theories	148
6.8 Prospects for a solution	150
References	151
Further reading and surfing	153
7 The origin of proteins and nucleic acids	
<i>Alonso Ricardo & Steven A. Benner</i>	154
7.1 Carbon and biochemistry	155
7.2 Reactivity	155
7.3 Curved arrow mechanisms for the synthesis of biological molecules	157
7.4 Extraterrestrial sources of organic building blocks	160
7.5 Thermodynamic equilibria	166
7.6 Problems in origins and their partial solution	167
7.7 Final thoughts and future directions	171
References	172
8 The roots of metabolism	
<i>George D. Cody & James H. Scott</i>	174
8.1 Introduction to cellular metabolism	174
8.2 The TCA cycle and its evolution	176
8.3 Two approaches to the emergence of the first metabolic pathways	178
8.4 Proto-metabolism and acetyl CoA synthesis	181
8.5 Proto-metabolism and mineral catalysts on the early Earth	183
8.6 Has primitive metabolic chemistry left us a “chemical fossil”?	184
8.7 Summary	184
References	185
Further reading	186
9 The origin of cellular life	
<i>David W. Deamer</i>	187
9.1 Introduction	187
9.2 The early Earth environment	187
9.3 The site of life’s origin	191
9.4 Organic carbon compounds on the early Earth	192
9.5 Sources of energy on the early Earth	194
9.6 The first cells	200
9.7 Membrane permeability	202
9.8 Encapsulation of macromolecules	203
9.9 A second origin of life in the laboratory?	205
9.10 Summary	206
References	206
Further reading	209

x Contents

PART IV Life on Earth	211
10 Evolution: a defining feature of life	
<i>John A. Baross</i>	213
10.1 From Lamarck to Darwin to the central dogma	213
10.2 Evolution at the molecular level	214
10.3 Mechanisms for acquiring new genes	216
10.4 Could there be life without evolution?	218
10.5 Evolution and extraterrestrial life	218
10.6 Summary	220
References	220
Further reading and surfing	221
11 Evolution of metabolism and early microbial communities	
<i>John A. Leigh, David A. Stahl, & James T. Staley</i>	222
11.1 Introduction	222
11.2 The setting: conditions on early Earth	222
11.3 Evidence for the nature of early metabolisms	223
11.4 Contemporary metabolism: principles an astrobiologist needs to know	225
11.5 Early metabolic mechanisms	228
11.6 Evolution of methanogenesis and acetogenesis: the first metabolisms?	228
11.7 Counterpoint: sulfate respiration very early?	230
11.8 Evolution of photosynthesis	231
11.9 Aerobic metabolism	232
11.10 Earth's earliest communities: microbial mats	232
11.11 Concluding thoughts	234
References	235
12 The earliest records of life on Earth	
<i>Roger Buick</i>	237
12.1 Problems with the record	237
12.2 Types of evidence	240
12.3 The oldest evidence of life	254
12.4 Astrobiological implications	261
References	261
Further reading	264
13 The origin and diversification of eukaryotes	
<i>Mitchell L. Sogin, David J. Patterson, & Andrew McArthur</i>	265
13.1 Introduction	265
13.2 Microbial diversity	265
13.3 Molecular phylogeny	266
13.4 Molecular ecology	267
13.5 Morphology and ultrastructure studies of protists	268
13.6 Molecular studies of protists	269
13.7 Future directions of ecogenomics	272
References	273

Contents

xi

14 Limits of carbon life on Earth and elsewhere

<i>John A. Baross, Julie A. Huber, & Matthew O. Schrenk</i>	275
14.1 Introduction	275
14.2 Looking for Earth-like environments elsewhere	277
14.3 Extremophiles and the limits of life	278
14.4 Water, desiccation, and life in non-aqueous solvents	281
14.5 Temperature extremes	283
14.6 Survival while traveling through space	284
14.7 Extremophiles, hydrothermal vents, and Earth's earliest microbes	286
14.8 Summary and future directions	289
References	289
Further reading	291

15 Life in ice

<i>Jody W. Deming & Hajo Eicken</i>	292
15.1 Introduction	292
15.2 Physics and chemistry of ice	295
15.3 Microbiology of ice	302
15.4 Summary and prospectus	309
References	311
Further reading and surfing	312

16 The evolution and diversification of life

<i>Stanley M. Awramik & Kenneth J. McNamara</i>	313
16.1 Introduction	313
16.2 The Proterozoic	313
16.3 The Phanerozoic	321
References	333
Further reading and surfing	334

17 Mass extinctions

<i>Peter D. Ward</i>	335
17.1 Introduction	335
17.2 Brief history	335
17.3 Studying mass extinctions	336
17.4 Earth's mass extinctions: ten real or potential events	339
17.5 Causes of mass extinctions	341
17.6 Impacts and mass extinctions	345
17.7 Frequency of mass extinctions	348
17.8 Longer-term effects of mass extinctions	348
17.9 Severity of mass extinctions	349
17.10 Extinction risk through time	349
17.11 Two case histories	350
17.12 Closing	353
References	353

PART V Potentially habitable worlds	355
18 Mars	
<i>Bruce M. Jakosky, Frances Westall, & André Brack</i>	357
18.1 Mars and astrobiology	357
18.2 Mars as a planet	358
18.3 Requirements for life to originate on a planet	359
18.4 The potential for life on Mars	360
18.5 Past searches for martian life	369
18.6 Searching for life on Mars	378
18.7 Concluding comments	382
18.8 Addendum: recent discoveries	382
References	384
19 Europa	
<i>Christopher F. Chyba & Cynthia B. Phillips</i>	388
19.1 Introduction	388
19.2 Jupiter and its satellites	388
19.3 Tidal evolution, resonances, and heating in the Galilean moons	389
19.4 Europa's space environment	392
19.5 Surface composition	394
19.6 Interior models	395
19.7 European geology	397
19.8 Heat transport and physics of the ice shell	401
19.9 Future means for detecting an ocean	403
19.10 Habitability of Europa	403
19.11 Europa as a possible analogue for early earth	407
19.12 An origin of life on Europa?	407
19.13 Searching for life	409
19.14 Europa and astrobiology	410
Appendix 19.1 Satellite tides and synchronous rotation	411
Appendix 19.2 Tidal circularization of orbits and nonsynchronous rotation	412
Appendix 19.3 Tidal heating	413
Appendix 19.4 Orbital resonance and the Laplace resonance	414
Appendix 19.5 Gravity and interior models	417
Appendix 19.6 Induced magnetic fields	417
Appendix 19.7 Heat conduction and convection	418
References	419
Further reading and surfing	423
20 Titan	
<i>Jonathan I. Lunine & Bashar Rizk</i>	424
20.1 Introduction	424
20.2 Titan's place in the Solar System	424
20.3 Titan's atmosphere	426
20.4 Hydrocarbon chemistry and oceans	428
20.5 Earth-based remote sensing	429
20.6 The Cassini–Huygens Mission	430
20.7 Cassini–Huygens's view of Titan	433
20.8 Future astrobiological exploration of Titan	439

Contents	xiii
20.9 Some astrobiological speculations	441
References	442
Further reading and surfing	443
21 Extrasolar planets	
<i>Paul Butler</i>	444
21.1 Introduction	444
21.2 Stars	445
21.3 Extrasolar planet detection techniques	446
21.4 Classes of planets	450
21.5 Masses of extrasolar planets	454
21.6 Stellar metallicity and extrasolar planets	455
21.7 Future of extrasolar planet searches	456
References	457
Further surfing	458
PART VI Searching for extraterrestrial life	459
22 How to search for life on other worlds	
<i>Christopher P. McKay</i>	461
22.1 Introduction and summary	461
22.2 Definitions for life	461
22.3 Requirements for life	462
22.4 Weird life	463
22.5 Establishing biological origin	464
22.6 Life is small	465
22.7 Movement and metabolism	465
22.8 Fossils: two case studies	466
22.9 Fossils are not enough	467
22.10 Global biology	468
22.11 Intelligent life	468
22.12 Searching Mars and Europa	468
22.13 Conclusion	470
References	471
23 Instruments and strategies for detecting extraterrestrial life	
<i>Pamela G. Conrad</i>	473
23.1 Introduction	473
23.2 The Viking mission	474
23.3 The Mars Exploration Rovers	476
23.4 Approaches to collecting data	477
23.5 Instrumentation	478
23.6 Summary	481
References	482
24 Societal and ethical concerns	
<i>Margaret S. Race</i>	483
24.1 Operating principles for astrobiology	483
24.2 Comparison of astrobiology with biotechnology	485
24.3 Examples from Mars exploration	488

xiv Contents

24.4	Procedures following discovery of extraterrestrial life	494
24.5	The codependence of scientists and society	495
	References	496
25	Planetary protection: microbial tourism and sample return	
	<i>John D. Rummel</i>	498
25.1	Introduction	498
25.2	Microbial tourists and invaders	498
25.3	A planetary protection policy	500
25.4	Recommendations to NASA on contamination control	502
25.5	How would Earth respond to an exotic life form?	504
25.6	Spacecraft sterilization	505
25.7	A sample handling protocol	508
25.8	Future considerations	509
	References	511
	Further reading and surfing	512
26	Searching for extraterrestrial intelligence	
	<i>Jill C. Tarter</i>	513
26.1	Technology, not intelligence	513
26.2	Which technologies?	513
26.3	The nine-dimensional cosmic haystack	516
26.4	How many technical civilizations might there be?	518
26.5	Search strategies	520
26.6	Current searches	525
26.7	Should we be transmitting?	530
26.8	Future searches	531
26.9	What if we succeed?	533
26.10	What if we don't succeed?	534
	References	535
	Further reading and surfing	535
27	Alien biochemistries	
	<i>Peter D. Ward & Steven A. Benner</i>	537
27.1	Introduction	537
27.2	Life with different biopolymers	537
27.3	Life with a different solvent	539
27.4	Life using different elements	541
27.5	Life with a different architecture	542
27.6	Summary	542
	References	543
	Further reading	544
PART VII	Future of astrobiology	545
28	Disciplinary aspirations and educational opportunities	
	<i>Llyd Wells, John Armstrong, & Julie A. Huber</i>	547
28.1	Astrobiology: a new discipline?	547
28.2	Astrobiology and ignorance	548

Contents	xv
28.3 The UW graduate program	553
28.4 The future of astrobiology	556
References	557
Epilogue	
<i>Christopher F. Chyba</i>	558
References	559
PART VIII Appendices	561
Appendix A Units and usages	563
A.1 Units	563
A.2 Usages	563
Appendix B Planetary properties	564
Appendix C The geological timescale	
<i>Stanley M. Awramik & Kenneth J. McNamara</i>	566
References	568
Appendix D Astrobiological destinations on planet Earth	
<i>Jelte P. Harnmeijer (Ed.)</i>	569
Introduction	569
D.1 Iceland	
<i>Steven Vance & Mark Claire</i>	569
D.2 Yellowstone	
<i>Nicolas Pinel</i>	570
D.3 Antarctica	
<i>Randall Perry</i>	571
D.4 Hawai'i	
<i>Roger Buick</i>	572
D.5 Darwin's home	
<i>John Edwards & Woody Sullivan</i>	573
D.6 Galápagos Islands	
<i>Julie Huber</i>	574
D.7 Isua	
<i>Jelte P. Harnmeijer</i>	575
D.8 Pilbara	
<i>Jelte P. Harnmeijer</i>	576
D.9 Shark Bay	
<i>Jelte P. Harnmeijer</i>	577
D.10 Arecibo radio telescope	
<i>Woody Sullivan</i>	577
Appendix E The micro*scope web tool	
<i>David J. Patterson & Mitchell L. Sogin</i>	579
E.1 Exploring knowledge space for microbes	579
E.2 Bridging phenotype and genotype databases	583
References	584
Index	585
