

Contents

Preface ix

1 Introduction 1

- 1.1 Objectives and strategy 1
- 1.2 Taxonomic scope of foraminifera 1
- 1.3 Historical development of ecological studies 2
- 1.4 Major developments over the past decade 4
- 1.5 The future 6

2 Methods 7

- 2.1 Planning general field surveys 7
- 2.2 Planning surveys to address a specific question 8
- 2.3 Types of sampler, taking and handling samples 8
- 2.4 Collecting live individuals 9
- 2.5 Distinguishing live from dead foraminifera 10
- 2.6 Preservation and fixing 13
- 2.7 Processing modern sediments for foraminifera 13
- 2.8 Foraminiferal separation using trichloroethylene 14
- 2.9 Splitting samples 15
- 2.10 Census data, standing crop and biomass 15
- 2.11 Analysis of field data 17
- 2.12 Multivariate analysis 21
- 2.13 Designing and running experiments in field and laboratory 22
- 2.14 Essential data in publications 24
- 2.15 Selection of data used in this book 24

3 Aspects of biology and basic ecology 27

- 3.1 Introduction 27
- 3.2 Biology 27
- 3.3 Basic ecology 51

vi Contents

- 4 Marginal marine environments 61**
 - 4.1 Introduction 61
 - 4.2 Marsh and mangal/mangrove 62
 - 4.3 Intertidal-subtidal brackish lagoons and estuaries 77
 - 4.4 Deltas 98
 - 4.5 Fjords 100
 - 4.6 Isolation basins 107
 - 4.7 General attributes of faunas 108
 - 4.8 Summary 113

- 5 Shelf seas 116**
 - 5.1 Introduction 116
 - 5.2 Europe and Africa 117
 - 5.3 Atlantic North America 136
 - 5.4 Gulf of Mexico and Caribbean 140
 - 5.5 South America 142
 - 5.6 Pacific Americas 142
 - 5.7 West Pacific 149
 - 5.8 Australia 150
 - 5.9 New Zealand 150
 - 5.10 Pacific Ocean 150
 - 5.11 Indian Ocean 151
 - 5.12 Southern Ocean 152
 - 5.13 Stable isotopes 156
 - 5.14 Summary 157

- 6 Carbonate environments 163**
 - 6.1 Introduction 163
 - 6.2 Warm-water carbonate environments 163
 - 6.3 Cool-temperate carbonate environments 177
 - 6.4 Distinction between warm and cool-temperate carbonate shelf faunas 177
 - 6.5 Summary 178

- 7 Deep sea 180**
 - 7.1 Introduction 180
 - 7.2 Foraminifera 183
 - 7.3 Summary and conclusions 227

- 8 Summary of living distributions 238**
 - 8.1 Introduction 238
 - 8.2 Major new findings 238
 - 8.3 Response of foraminifera to environmental factors 239
 - 8.4 Microdistribution patterns 243

Cambridge University Press

978-0-521-82839-0 - Ecology and Applications of Benthic Foraminifera

John W. Murray

Table of Contents

[More information](#)

Contents vii

8.5	Interdependent controls on microdistributions	245
8.6	Time-series datasets and environmental variability	247
8.7	Large-scale distribution patterns	249
8.8	Species diversity	250
8.9	Colonisation/recolonisation	254
8.10	The species pool	257
8.11	Biogeography	257
8.12	Standing crop and biomass	260
8.13	Role of benthic foraminifera in modern ecosystems	261
8.14	Comments on other topics	261
8.15	Final conclusions	264
9	Taphonomic processes: formation of dead and fossil assemblages	265
9.1	Introduction	265
9.2	Life processes influencing the contribution of tests to the sediment	266
9.3	Postmortem processes affecting the preservation of foraminifera	266
9.4	Summary	280
10	Applications	281
10.1	Introduction	281
10.2	The present as a key to the past	282
10.3	Sequence stratigraphy–biostratigraphy	283
10.4	Palaeoecology	285
10.5	Palaeoceanography	288
10.6	Environmental monitoring	304
10.7	Deformed tests	317
10.8	Summary and conclusions	319
	<i>Glossary</i>	320
	<i>Appendix</i>	327
	<i>References</i>	344
	<i>Taxonomic Index</i>	412
	<i>General Index</i>	422
