

Contents

<i>Preface</i>	<i>page vii</i>
Part I Banach algebras <i>H. Garth Dales</i>	1
1 Definitions and examples	3
2 Ideals and the spectrum	12
3 Gelfand theory	20
4 The functional calculus	30
5 Automatic continuity of homomorphisms	38
6 Modules and derivatives	48
7 Cohomology	58
Part II Harmonic analysis and amenability <i>George A. Willis</i>	73
8 Locally compact groups	75
9 Group algebras and representations	86
10 Convolution operators	98
11 Amenable groups	109
12 Harmonic analysis and automatic continuity	121
Part III Invariant subspaces <i>Jörg Eschmeier</i>	135
13 Compact operators	137
14 Unitary dilations and the H^∞ -functional class	143
15 Hyperinvariant subspaces	154
16 Invariant subspaces for contractions	160
17 Invariant subspaces for subnormal operators	166
18 Invariant subspaces for subdecomposable operators	171
19 Reflexivity of operator algebras	178
20 Invariant subspaces for commuting contractions	186
Appendix to Part III	193
Part IV Local spectral theory <i>Kjeld Bagger Laursen</i>	199
21 Basic notions from operator theory	201
22 Classes of decomposable operators	212

vi	<i>Contents</i>	
23	Duality theory	226
24	Preservation of spectra and index	230
25	Multipliers on commutative Banach algebras	241
	Appendix to Part IV	254
Part V	Single-valued extension property and Fredholm theory <i>Pietro Aiena</i>	265
26	Semi-regular operators	267
27	The single-valued extension property	285
28	SVEP for semi-Fredholm operators	298
	<i>Index of symbols</i>	319
	<i>Subject index</i>	321
