Preface	<i>page</i> xiii
<b>Introduction</b>	1
<b>Part I Linear Theory</b>	
<b>1 The Concept of Nonuniform Hyperbolicity</b>	9
1.1 Motivation	9
1.2 Basic Setting	13
1.2.1 Exponential Splitting and Nonuniform Hyperbolicity	13
1.2.2 Tempered Equivalence	14
1.2.3 The Continuous-Time Case	15
1.3 Lyapunov Exponents Associated to Sequences of Matrices	16
1.3.1 Definition of the Lyapunov Exponent	16
1.3.2 Forward and Backward Regularity	18
1.3.3 A Criterion of Forward Regularity for Triangular Matrices	25
1.3.4 The Lyapunov–Perron Regularity	31
1.4 Notes	33
<b>2 Lyapunov Exponents for Linear Extensions</b>	35
2.1 Cocycles over Dynamical Systems	35
2.1.1 Cocycles and Linear Extensions	35
2.1.2 Cohomology and Tempered Equivalence	37
2.1.3 Examples and Basic Constructions	39
2.2 Hyperbolicity of Cocycles	41
2.2.1 Hyperbolic Cocycles	41
2.2.2 Regular Sets of Hyperbolic Cocycles	43
2.2.3 Cocycles over Topological Spaces	46
2.3 Lyapunov Exponents for Cocycles	46
2.4 Spaces of Cocycles	50

<b>3</b>	<b>Regularity of Cocycles</b>	53
3.1	The Lyapunov–Perron regularity	53
3.2	Lyapunov Exponents and Basic Constructions	57
3.3	Lyapunov Exponents and Hyperbolicity	59
3.4	The Multiplicative Ergodic Theorem	64
3.4.1	One-Dimensional Cocycles and Birkhoff’s Ergodic Theorem	64
3.4.2	Oseledets’ Proof of the Multiplicative Ergodic Theorem	65
3.4.3	Lyapunov Exponents and Subadditive Ergodic Theorem	69
3.4.4	Raghunathan’s Proof of the Multiplicative Ergodic Theorem	70
3.5	Tempering Kernels and the Reduction Theorems	75
3.5.1	Lyapunov Inner Products	76
3.5.2	The Oseledets–Pesin Reduction Theorem	77
3.5.3	A Tempering Kernel	80
3.5.4	Zimmer’s Amenable Reduction	82
3.5.5	The Case of Noninvertible Cocycles	82
3.6	More Results on Lyapunov–Perron Regularity	83
3.6.1	Higher-Rank Abelian Actions	83
3.6.2	The Case of Flows	88
3.6.3	Nonpositively Curved Spaces	91
3.7	Notes	94
<b>4</b>	<b>Methods for Estimating Exponents</b>	95
4.1	Cone and Lyapunov Function Techniques	95
4.1.1	Lyapunov Functions	96
4.1.2	A Criterion for Nonvanishing Lyapunov Exponents	98
4.1.3	Invariant Cone Families	101
4.2	Cocycles with Values in the Symplectic Group	102
4.3	Monotone Operators and Lyapunov Exponents	106
4.3.1	The Algebra of Potapov	106
4.3.2	Lyapunov Exponents for $J$ -Separated Cocycles	108
4.3.3	The Lyapunov Spectrum for Conformally Hamiltonian Systems	112
4.4	A Remark on Applications of Cone Techniques	116
4.5	Notes	117
<b>5</b>	<b>The Derivative Cocycle</b>	118
5.1	Smooth Dynamical Systems and the Derivative Cocycle	118
5.2	Nonuniformly Hyperbolic Diffeomorphisms	119
5.3	Hölder Continuity of Invariant Distributions	122
5.4	Lyapunov Exponent and Regularity of the Derivative Cocycle	125
5.5	On the Notion of Dynamical Systems with Nonzero Lyapunov Exponents	129

	Contents	ix
5.6	Regular Neighborhoods	130
5.7	Cocycles over Smooth Flows	133
5.8	Semicontinuity of Lyapunov Exponents	134
<b>Part II Examples and Foundations of the Nonlinear Theory</b>		
<b>6</b>	<b>Examples of Systems with Hyperbolic Behavior</b>	<b>139</b>
6.1	Uniformly Hyperbolic Sets	139
6.1.1	Hyperbolic Sets for Maps	139
6.1.2	Hyperbolic Sets for Flows	143
6.1.3	Linear Horseshoes	144
6.1.4	Nonlinear Horseshoes	147
6.2	Nonuniformly Hyperbolic Perturbations of Horseshoes	152
6.2.1	Slow Expansion Near a Fixed Point	152
6.2.2	Further Modifications	154
6.3	Diffeomorphisms with Nonzero Lyapunov Exponents on Surfaces	158
6.3.1	Analytic Nonuniformly Hyperbolic Diffeomorphisms	159
6.3.2	A Nonuniformly Hyperbolic Diffeomorphism on the Sphere	163
6.3.3	Nonuniformly Hyperbolic Diffeomorphisms on Compact Surfaces	164
6.3.4	A Nonuniformly Hyperbolic Diffeomorphism of the Torus	166
6.4	Pseudo-Anosov Maps	167
6.4.1	Definitions and Basic Properties	168
6.4.2	Smooth Models of Pseudo-Anosov Maps	171
6.5	Nonuniformly Hyperbolic Flows	182
6.6	Some Other Examples	185
6.7	Notes	187
<b>7</b>	<b>Stable Manifold Theory</b>	<b>188</b>
7.1	The Stable Manifold Theorem	188
7.2	Nonuniformly Hyperbolic Sequences of Diffeomorphisms	191
7.3	The Hadamard–Perron Theorem: Hadamard’s Method	192
7.3.1	Invariant Cone Families	193
7.3.2	Admissible Manifolds	196
7.3.3	Existence of $(s, \gamma)$ - and $(u, \gamma)$ -Manifolds	200
7.3.4	Invariant Families of Local Manifolds	203
7.3.5	Higher Differentiability of Invariant Manifolds	205
7.4	The Graph Transform Property	206
7.5	The Hadamard–Perron Theorem: Perron’s Method	207
7.5.1	An Abstract Version of the Stable Manifold Theorem	207
7.5.2	Smoothness of Local Manifolds	215
7.6	Local Unstable Manifolds	220

x	Contents	
	7.7 The Stable Manifold Theorem for Flows	221
	7.8 $C^1$ Pathological Behavior: Pugh's Example	221
	7.9 Notes	225
<b>8</b>	<b>Basic Properties of Stable and Unstable Manifolds</b>	<b>226</b>
	8.1 Characterization and Sizes of Local Stable Manifolds	226
	8.2 Global Stable and Unstable Manifolds	229
	8.3 Foliations with Smooth Leaves	231
	8.4 Filtrations of Intermediate Local and Global Manifolds	232
	8.5 The Lipschitz Property of Intermediate Foliations	236
	8.6 The Absolute Continuity Property	240
	8.6.1 Absolute Continuity of Holonomy Maps	242
	8.6.2 Absolute Continuity of Local Stable Manifolds	251
	8.6.3 Foliation That Is Not Absolutely Continuous	254
	8.6.4 The Jacobian of the Holonomy Map	255
	8.7 Notes	257
	<b>Part III Ergodic Theory of Smooth and SRB Measures</b>	
<b>9</b>	<b>Smooth Measures</b>	<b>261</b>
	9.1 Ergodic Components	261
	9.2 Local Ergodicity	266
	9.3 The $s$ - and $u$ -Measures	282
	9.4 The Leaf-Subordinated Partition and the $K$ -Property	285
	9.5 The Bernoulli Property	290
	9.6 The Continuous-Time Case	297
	9.7 Notes	303
<b>10</b>	<b>Measure-Theoretic Entropy and Lyapunov Exponents</b>	<b>304</b>
	10.1 Entropy of Measurable Transformations	304
	10.2 The Margulis–Ruelle Inequality	305
	10.3 The Topological Entropy and Lyapunov Exponents	308
	10.4 The Entropy Formula	311
	10.5 Mañé's Proof of the Entropy Formula	315
	10.6 Notes	324
<b>11</b>	<b>Stable Ergodicity and Lyapunov Exponents. More Examples of Systems with Nonzero Exponents</b>	<b>326</b>
	11.1 Uniform Partial Hyperbolicity and Stable Ergodicity	326
	11.2 Partially Hyperbolic Systems with Nonzero Lyapunov Exponents	329
	11.3 Hyperbolic Diffeomorphisms with Countably Many Ergodic Components	337
	11.4 Existence of Hyperbolic Diffeomorphisms on Compact Manifolds	349
	11.5 Existence of Hyperbolic Flows on Compact Manifolds	369
	11.6 Foliations That Are Not Absolutely Continuous	378

Contents	xi
11.7 An Open Set of Diffeomorphisms with Nonzero Lyapunov Exponents on Tori	382
11.8 Notes	383
<b>12 Geodesic Flows</b>	<b>385</b>
12.1 Hyperbolicity of Geodesic Flows	385
12.2 Ergodic Properties of Geodesic Flows	394
12.3 Entropy of Geodesic Flows	404
12.4 Topological Properties of Geodesic Flows	407
12.5 The Teichmüller Geodesic Flow	409
12.6 Notes	415
<b>13 SRB Measures</b>	<b>417</b>
13.1 Definition and Ergodic Properties of SRB Measures	417
13.2 A Characterization of SRB Measures	421
13.3 Constructions of SRB Measures	423
13.4 Notes	430
 <b>Part IV General Hyperbolic Measures</b>	
<b>14 Hyperbolic Measures: Entropy and Dimension</b>	<b>433</b>
14.1 Pointwise Dimensions and the Ledrappier–Young Entropy Formula	433
14.1.1 Local Entropies	434
14.1.2 Leaf Pointwise Dimensions	438
14.1.3 The Ledrappier–Young Entropy Formula	449
14.2 Local Product Structure of Hyperbolic Measures	450
14.3 Applications to Dimension Theory	461
14.4 Notes	461
<b>15 Hyperbolic Measures: Topological Properties</b>	<b>463</b>
15.1 The Closing Lemma	463
15.2 The Shadowing Lemma	472
15.3 The Livshitz Theorem	473
15.4 Hyperbolic Periodic Orbits	474
15.5 Topological Transitivity and Spectral Decomposition	482
15.6 Entropy, Horseshoes, and Periodic Points	482
15.7 Continuity Properties of Entropy	485
Bibliography	491
Index	501
