## Clinical Uses of Botulinum Toxins

Botulinum toxins now play a very significant role in the management of a wide variety of medical conditions; from headaches to hypersalivation, and from spasticity to sweating. In this book, a strong, international team of experts outline the basic neurochemistry of botulinum toxins and chart the progress of the drug from laboratory to clinic. Then individual chapters summarize their use for the main clinical indications in the context of other available treatments.

This book will be of interest to neuroscientists and practising clinicians working in a wide range of specialties, from neurology and dermatology to pediatrics, plastic surgery and rehabilitation medicine.

**Anthony B. Ward** is Director of the University Hospital of North Staffordshire Rehabilitation Centre in Stoke-on-Trent, and Senior Lecturer in Rehabilitation Medicine at the University of Keele. He is the President of the European Union of Medical Specialists (UEMS) Section of Physical and Rehabilitation Medicine.

**Michael P. Barnes** is Professor of Neurological Rehabilitation in the Academic Unit of Neurological Rehabilitation, University of Newcastle-upon-Tyne, and Consultant Neurologist and Consultant in Rehabilitation Medicine at Walkergate Park International Centre for Neurorehabilitation and Neuropsychiatry in Newcastle-upon-Tyne. He is President of the World Federation for Neurorehabilitation.
