1 International research contested: controversies and debates	1
Why do clinical research in developing countries?	6
Which countries are “developing”?	9
Health needs in developing countries	12
The controversy that launched debates	13
The proposed Surfaxin study	17
Revision of the Declaration of Helsinki	18
Procedural solutions	21
Agreement on underlying propositions	24
Ethical guidelines: pragmatic or aspirational?	30
2 Maintaining ethical standards in research	36
Ethical standards and “standard of care”	38
Treat like cases alike	44
What do the guidelines say?	47
Conclusions	64
3 Striving for justice in research	68
Distributive justice in global research	69
Global disparities and health equity	72
Justice, health care, and research	75
Post-trial benefits of research: obligation or charity?	77
What the guidelines say	82
Responses to the CIOMS guideline	88
The FDA and PhRMA	90
National regulations and guidelines	92
Conclusions	94
4 Avoiding exploitation	99
Definitional debates	101
What is exploitation in multinational research?	105
What guidelines and commentators say	107
Candidates for circumstances of exploitation in international research	118
	v

vi	Contents	
	Inducing vulnerable subjects as exploitation	122
	Best current treatment and post-trial benefits as undue inducements	124
	Conclusion	127
5	Providing safeguards: informed consent and review of research	131
	Allegations of violations	133
	Inadequacies of safeguards	136
	Informed consent: standards and practices	139
	Adherence to US rules: universal standards or ethical imperialism?	145
	Research ethics committees: do they provide adequate protection?	150
	What the guidelines say	152
	The CIOMS debates	154
	More disagreements: the NBAC survey	157
	Conclusions	158
6	Making drugs affordable	163
	Differential pricing	166
	Prior agreements	171
	International collaborative efforts and public-private partnerships	174
	Manufacture of generic copies of patented drugs and compulsory licensing	182
7	Respecting, protecting, and fulfilling human rights	193
	Human rights and the concept of dignity	196
	The United States and human rights	198
	Human rights in the conduct of research	200
	Right to health care, right to health	202
	HIV/AIDS and the right to health	208
	Human rights, access, and affordability of drugs	210
	Human rights, international guidelines, and ethical principles	214
8	Striving for a single standard	226
	A single standard for control groups	230
	Providing successful products after a trial is concluded	238
	Irreconcilable differences	241
	Building capacity and assessing ethics in ongoing research	245
	Dilemmas in future HIV/AIDS preventive vaccine trials	248
	What the guidelines say	254
	Harmonizing international guidelines	257
	The future	260
