## Contents

<i>Preface</i>	<i>page</i> ix
<i>Notation and symbols</i>	xiii
<b>Part I Basic principles</b>	1
<b>1 What is a stochastic process?</b>	3
1.1 Definition	3
1.2 Dependence among states	10
1.3 Selecting models	14
<b>2 Basics of statistical modelling</b>	18
2.1 Descriptive statistics	18
2.2 Linear regression	21
2.3 Categorical covariates	26
2.4 Relaxing the assumptions	29
<b>Part II Categorical state space</b>	37
<b>3 Survival processes</b>	39
3.1 Theory	39
3.2 Right censoring	47
3.3 Interval censoring	53
3.4 Finite mixtures	57
3.5 Models based directly on intensities	60
3.6 Changing factors over a lifetime	64
<b>4 Recurrent events</b>	71
4.1 Theory	72
4.2 Descriptive graphical techniques	83
4.3 Counts of recurrent events	88
4.4 Times between recurrent events	91
<b>5 Discrete-time Markov chains</b>	101
5.1 Theory	102
5.2 Binary point processes	108
5.3 Checking the assumptions	114
5.4 Structured transition matrices	119

vi	<i>Contents</i>	
<b>6</b>	<b>Event histories</b>	133
6.1	Theory	133
6.2	Models for missing observations	138
6.3	Progressive states	142
<b>7</b>	<b>Dynamic models</b>	151
7.1	Serial dependence	152
7.2	Hidden Markov models	161
7.3	Overdispersed durations between recurrent events	167
7.4	Overdispersed series of counts	178
<b>8</b>	<b>More complex dependencies</b>	183
8.1	Birth processes	183
8.2	Autoregression	191
8.3	Marked point processes	195
8.4	Doubly stochastic processes	198
8.5	Change points	202
	<b>Part III Continuous state space</b>	211
<b>9</b>	<b>Time series</b>	213
9.1	Descriptive graphical techniques	213
9.2	Autoregression	216
9.3	Spectral analysis	226
<b>10</b>	<b>Diffusion and volatility</b>	233
10.1	Wiener diffusion process	233
10.2	Ornstein–Uhlenbeck diffusion process	238
10.3	Heavy-tailed distributions	240
10.4	ARCH models	249
<b>11</b>	<b>Dynamic models</b>	255
11.1	Kalman filtering and smoothing	255
11.2	Hidden Markov models	259
11.3	Overdispersed responses	262
<b>12</b>	<b>Growth curves</b>	268
12.1	Characteristics	268
12.2	Exponential forms	269
12.3	Sigmoidal curves	275
12.4	Richards growth curve	278
<b>13</b>	<b>Compartment models</b>	285
13.1	Theory	285
13.2	Modelling delays in elimination	289
13.3	Measurements in two compartments	293
<b>14</b>	<b>Repeated measurements</b>	303
14.1	Random effects	303
14.2	Normal random intercepts	306
14.3	Normal random coefficients	310
14.4	Gamma random effects	312
