| <i>Preface to the First Edition</i>                                 | xv             |
| <b>0 Review and Miscellanea</b>                                     | <b>1</b>       |
| <b>0.0</b> Introduction   | 1              |
| <b>0.1</b> Vector spaces  | 1              |
| <b>0.2</b> Matrices   | 5              |
| <b>0.3</b> Determinants   | 8              |
| <b>0.4</b> Rank   | 12             |
| <b>0.5</b> Nonsingularity   | 14             |
| <b>0.6</b> The Euclidean inner product and norm                     | 15             |
| <b>0.7</b> Partitioned sets and matrices                            | 16             |
| <b>0.8</b> Determinants again                                       | 21             |
| <b>0.9</b> Special types of matrices                                | 30             |
| <b>0.10</b> Change of basis   | 39             |
| <b>0.11</b> Equivalence relations                                   | 40             |
| <b>1 Eigenvalues, Eigenvectors, and Similarity</b>                  | <b>43</b>      |
| <b>1.0</b> Introduction   | 43             |
| <b>1.1</b> The eigenvalue–eigenvector equation                      | 44             |
| <b>1.2</b> The characteristic polynomial and algebraic multiplicity | 49             |
| <b>1.3</b> Similarity   | 57             |
| <b>1.4</b> Left and right eigenvectors and geometric multiplicity   | 75             |
| <b>2 Unitary Similarity and Unitary Equivalence</b>                 | <b>83</b>      |
| <b>2.0</b> Introduction   | 83             |
| <b>2.1</b> Unitary matrices and the <i>QR</i> factorization         | 83             |
| <b>2.2</b> Unitary similarity                                       | 94             |
| <b>2.3</b> Unitary and real orthogonal triangularizations           | 101            |
| <b>2.4</b> Consequences of Schur’s triangularization theorem        | 108            |
| <b>2.5</b> Normal matrices  | 131            |

|          |   |            |
|----------|---|------------|
| 2.6      | Unitary equivalence and the singular value decomposition            | 149        |
| 2.7      | The <i>CS</i> decomposition   | 159        |
| <b>3</b> | <b>Canonical Forms for Similarity and Triangular Factorizations</b> | <b>163</b> |
| 3.0      | Introduction  | 163        |
| 3.1      | The Jordan canonical form theorem                                   | 164        |
| 3.2      | Consequences of the Jordan canonical form                           | 175        |
| 3.3      | The minimal polynomial and the companion matrix                     | 191        |
| 3.4      | The real Jordan and Weyr canonical forms                            | 201        |
| 3.5      | Triangular factorizations and canonical forms                       | 216        |
| <b>4</b> | <b>Hermitian Matrices, Symmetric Matrices, and Congruences</b>      | <b>225</b> |
| 4.0      | Introduction  | 225        |
| 4.1      | Properties and characterizations of Hermitian matrices              | 227        |
| 4.2      | Variational characterizations and subspace intersections            | 234        |
| 4.3      | Eigenvalue inequalities for Hermitian matrices                      | 239        |
| 4.4      | Unitary congruence and complex symmetric matrices                   | 260        |
| 4.5      | Congruences and diagonalizations                                    | 279        |
| 4.6      | Consimilarity and condensation                                      | 300        |
| <b>5</b> | <b>Norms for Vectors and Matrices</b>                               | <b>313</b> |
| 5.0      | Introduction  | 313        |
| 5.1      | Definitions of norms and inner products                             | 314        |
| 5.2      | Examples of norms and inner products                                | 320        |
| 5.3      | Algebraic properties of norms                                       | 324        |
| 5.4      | Analytic properties of norms  | 324        |
| 5.5      | Duality and geometric properties of norms                           | 335        |
| 5.6      | Matrix norms  | 340        |
| 5.7      | Vector norms on matrices  | 371        |
| 5.8      | Condition numbers: inverses and linear systems                      | 381        |
| <b>6</b> | <b>Location and Perturbation of Eigenvalues</b>                     | <b>387</b> |
| 6.0      | Introduction  | 387        |
| 6.1      | Geršgorin discs   | 387        |
| 6.2      | Geršgorin discs – a closer look                                     | 396        |
| 6.3      | Eigenvalue perturbation theorems                                    | 405        |
| 6.4      | Other eigenvalue inclusion sets                                     | 413        |
| <b>7</b> | <b>Positive Definite and Semidefinite Matrices</b>                  | <b>425</b> |
| 7.0      | Introduction  | 425        |
| 7.1      | Definitions and properties  | 429        |
| 7.2      | Characterizations and properties                                    | 438        |
| 7.3      | The polar and singular value decompositions                         | 448        |
| 7.4      | Consequences of the polar and singular value decompositions         | 458        |
| 7.5      | The Schur product theorem   | 477        |
| 7.6      | Simultaneous diagonalizations, products, and convexity              | 485        |
| 7.7      | The Loewner partial order and block matrices                        | 493        |
| 7.8      | Inequalities involving positive definite matrices                   | 505        |
