	<i>List of Illustrations</i>	<i>page xi</i>
	<i>Preface</i>	<i>xiii</i>
<b>1</b>	<b>Hyperbolic space and its isometries</b>	<b>1</b>
1.1	Möbius transformations	1
1.2	Hyperbolic geometry	6
1.3	The circle or sphere at infinity	11
1.4	Gaussian curvature	15
1.5	Further properties of Möbius transformations	18
1.6	Exercises and explorations	23
<b>2</b>	<b>Discrete groups</b>	<b>49</b>
2.1	Convergence of Möbius transformations	49
2.2	Discreteness	51
2.3	Elementary discrete groups	55
2.4	Kleinian groups	58
2.5	Quotient manifolds and orbifolds	62
2.5.1	Two fundamental algebraic theorems	68
2.6	Introduction to Riemann surfaces and their uniformization	69
2.7	Fuchsian and Schottky groups	74
2.8	Riemannian metrics and quasiconformal mappings	78
2.9	Exercises and explorations	83
<b>3</b>	<b>Properties of hyperbolic manifolds</b>	<b>105</b>
3.1	The Ahlfors Finiteness Theorem	105
3.2	Tubes and horoballs	106
3.3	Universal properties	108
3.4	The thick/thin decomposition of a manifold	115
3.5	Fundamental polyhedra	116
3.6	Geometric finiteness	124
3.7	Three-manifold surgery	129
3.8	Quasifuchsian groups	134
3.9	Geodesic and measured geodesic laminations	136

viii	<i>Contents</i>	
	3.10 The convex hull of the limit set	144
	3.11 The convex core	151
	3.12 The compact and relative compact core	155
	3.13 Rigidity	156
	3.14 Exercises and explorations	161
<b>4</b>	<b>Algebraic and geometric convergence</b>	<b>187</b>
	4.1 Algebraic convergence	187
	4.2 Geometric convergence	193
	4.3 Polyhedral convergence	194
	4.4 The geometric limit	197
	4.5 Convergence of limit sets and regions of discontinuity	200
	4.6 New parabolics	203
	4.7 Acylindrical manifolds	205
	4.8 Dehn surgery	207
	4.9 The prototypical example	208
	4.10 Manifolds of finite volume	211
	4.11 The Dehn surgery theorems for finite volume manifolds	212
	4.12 Exercises and explorations	218
<b>5</b>	<b>Deformation spaces and the ends of manifolds</b>	<b>239</b>
	5.1 The representation variety	239
	5.2 Homotopy equivalence	244
	5.3 The quasiconformal deformation space boundary	248
	5.4 The three great conjectures	250
	5.5 Ends of hyperbolic manifolds	251
	5.6 Tame manifolds	252
	5.7 Quasifuchsian spaces	261
	5.8 The quasifuchsian space boundary	265
	5.9 Geometric limits at boundary points	271
	5.10 Exercises and explorations	282
<b>6</b>	<b>Hyperbolization</b>	<b>312</b>
	6.1 Hyperbolic manifolds that fiber over a circle	312
	6.1.1 Automorphisms of surfaces	312
	6.1.2 The Double Limit Theorem	314
	6.1.3 Manifolds fibered over the circle	315
	6.2 The Skinning Lemma	317
	6.2.1 Hyperbolic manifolds with totally geodesic boundary	317
	6.2.2 Skinning the manifold (Part II)	319
	6.3 The Hyperbolization Theorem	322
	6.3.1 Knots and links	325
	6.4 Geometrization	327
	6.5 The Orbifold Theorem	329
	6.6 Exercises and Explorations	331

<i>Contents</i>		<i>ix</i>
<b>7</b>	<b>Line geometry</b>	348
	7.1 Half-rotations	348
	7.2 The Lie product	349
	7.3 Square roots	353
	7.4 Complex distance	353
	7.5 Complex distance and line geometry	355
	7.6 Exercises and explorations	356
<b>8</b>	<b>Right hexagons and hyperbolic trigonometry</b>	366
	8.1 Generic right hexagons	366
	8.2 The sine and cosine laws for generic right hexagons	368
	8.3 Degenerate right hexagons	370
	8.4 Formulas for triangles, quadrilaterals, and pentagons	372
	8.5 Exercises and explorations	375
	<i>Bibliography</i>	393
	<i>Index</i>	411
