<i>Preface</i>	page xi
<b>Part I Near-equilibrium critical dynamics</b>	
<i>Introduction</i>	3
1 Equilibrium critical phenomena	5
1.1 Mean-field theory	6
1.2 Landau–Ginzburg theory	16
1.3 Scaling theory	23
1.4 Momentum shell renormalization group	28
1.5 <i>Appendix: Functional derivatives and integration</i>	39
Problems	41
2 Stochastic dynamics	45
2.1 Dynamic response and correlation functions	46
2.2 Stochastic processes	56
2.3 Three examples	67
2.4 Langevin equations	77
Problems	92
3 Dynamic scaling	96
3.1 Dynamic scaling hypothesis	97
3.2 Continuum theory:relaxational models	101
3.3 Conserved quantities and reversible mode couplings	112
Problems	126
4 Dynamic perturbation theory	130
4.1 Response field formalism	131
4.2 Relaxational dynamics:systematic perturbation theory	135
4.3 Feynman diagrams	142

4.4	Vertex functions	153
4.5	<i>Appendix: discretization, Jacobian, and response loops</i>	167
	Problems	168
5	Dynamic renormalization group	171
5.1	Primitive divergences and scaling dimensions	172
5.2	Renormalization via dimensional regularization	177
5.3	Renormalization group and dimensional expansion	185
5.4	Broken rotational symmetry and Goldstone modes	193
5.5	<i>Appendix: integrals in dimensional regularization</i>	202
	Problems	204
6	Hydrodynamic modes and reversible mode couplings	207
6.1	Coupling to a conserved scalar field	208
6.2	Reversible mode couplings in isotropic ferromagnets	217
6.3	The $O(n)$ -symmetric Sasvári–Schwabl–Szépfalusy model	226
6.4	Critical dynamics of binary fluids	238
	Problems	246
7	Phase transitions in quantum systems	251
7.1	Coherent-state path integrals	252
7.2	Boson superfluids	266
7.3	Quantum critical phenomena	283
7.4	Quantum antiferromagnets	290
7.5	<i>Appendix: Matsubara frequency sums</i>	301
	Problems	301
<b>Part II Scale invariance in non-equilibrium systems</b>		
	<i>Introduction</i>	307
8	Non-equilibrium critical dynamics	309
8.1	Non-equilibrium critical relaxation and ‘aging’	310
8.2	Coarsening and phase ordering	319
8.3	Effects of violating the detailed balance conditions	329
8.4	Non-equilibrium work and fluctuation theorems	336
8.5	<i>Appendix: general Gaussian fluctuations</i>	339
	Problems	341
9	Reaction-diffusion systems	345
9.1	Rate equations and scaling theory	346
9.2	Field theory for stochastic interacting particle systems	355
9.3	Diffusion-limited annihilation: depletion zones	367

Cambridge University Press

978-0-521-84223-5 - Critical Dynamics: A Field Theory Approach to Equilibrium and  
Non-Equilibrium Scaling Behavior

Uwe C. Täuber

Table of Contents

[More information](#)

<i>Contents</i>		ix
9.4	Pair annihilation of distinct particle species	376
9.5	Fluctuation effects in two-species binary reactions	382
	Problems	394
10	Active to absorbing state transitions	400
10.1	The directed percolation universality class	401
10.2	DP variants and other percolation processes	412
10.3	Branching and annihilating random walks	426
	Problems	437
11	Driven diffusive systems and growing interfaces	443
11.1	Driven diffusive systems	444
11.2	Critical dynamics of driven Ising lattice gases	456
11.3	Driven interfaces and the KPZ equation	469
11.4	Renormalization group analysis of the KPZ equation	479
	Problems	492
	<i>Index</i>	499
