Subject Index

Adele described, 183
Agent thought structure, adoption of, 124–125
Alberti, L.B., 307
Animated pedagogical agents (APAs). See also Informal instruction, animations in botany multimedia game scenario, 184–185

cognitive processing enhancement by, 197, 201
design, principles of, 202–203
experiments
agent vs. non-agent environment, 192–194, 201
interactivity & guidance hypotheses, 199–200, 201–202, 359
visual vs. auditory agent cues, 194–197
learning enhancement by, 188–190, 198
learning impedance by, 191–192, 201
overview, 183, 359–360
roles of, 183–184, 186–188

Animations
appeal of, 263
applications of, 264, 271, 288, 300–301
benefits of, 5, 92, 125–126, 143, 235–236, 286
as compensation for lack of spatial ability, 7
comprehension of (See Comprehension; Learning)
as content representations, 360–361
defined, 141, 264–265, 304
directive function of, 315–316
feature usage, verification of, 18–19 (See also Interrogation strategies)
history of, 286–287, 307–308
instructional uses of, 142–148
and judgment of mechanical events, 8, 266
limitations of, 33, 263–264
narrative structure in, 278
online processing of, 146–148
production cost, justification of, 26
realism in, 308
representational function of, 315–316
senses of, 359
spatial/temporal structures in, 317–318
student-authored (See Expository representations, student-authored)
types
effectiveness of, 100–105, 111–112
overview, 309
versatility of, 114
vs. static diagrams, 304–305

Anthropomorphism, 191
Arrows, 11, 18, 265, 270, 271–275, 281, 312
Assembly instructions study, 276–279, 281

  domain knowledge in, 5, 22
  flushing cistern experiments, 21–24
  high-spatial ability learners, 22
  overview, 21–24, 26
  top-down model of, 4, 50
  and visualization, 11, 142–143
  Computer algorithm learning study
    conventional simulations, similarity to
      and student rating, 248–249, 253, 254, 256–257
    learning progression in, 254–255
    media use and student rating, 246, 248, 252–254, 255–256
    overview, 235–238, 255
    representations
      evaluation of, study II, 240, 244–247, 249
      evaluation of, study III, 249–255
    student use of, 238–242, 256
  Computer tutors, 123
  Concept formation theory, 236
  Concept mapping, 124, 129
  Concurrency issues in processing, 51, 65–66
  Congruence Principle, 265–266
  Consequences, portrayal of, 271, 273
  Content, static vs. dynamic, 309–315
  Continuous simulation pictures
    circumnavigation study, 103
    facilitating function of, 101, 109–111
    in time differences display, 101, 102
  Cosmo described, 183
  Cost-efficient principle, 202–203
  Curtate cycloid illusion, 9
  Cycles/processes, portrayal of, 271, 273
  Decomposition
    of behaviors, 327
    of complex objects, 312–314
    of dynamic systems, 50–51, 66
    temporal changes, 323
  Deduction learning studies, 130–133, 137
  Degree of control and learning, 213–214, 219, 226
  Demonstrations study, 278–279, 281
  Depth aspect of mental representation in
cognitive processing, 169, 170, 174
  Depth-First Search algorithm, 251
  Design of animations
    Animated Pedagogical Agents, 202–203
    approaches to, 365–366
    attentional problems, resolving, 11–12
    cognitive load theory and, 88
    cognitive principles of (See Cognitive
design principles)
    communication in, 12
    and comprehension, 9, 13, 50–51
    and extraneous overload, 36–37, 40–41
    for formal instruction, 291–292
    history of, 287
    for informal instruction, 295
    interactivity, benefits of, 123–124, 292
    learner centered approach to, 32
    limitations of, vii
    minimalism in, 351–352
    for playful instruction, 299–300
    realism, domain knowledge and, 338–339
    realism in, 338–339
    segmenting principle, 41–42
    Teachable Agents, 123–124, 136
    technology centered approach to, 32, 167
    user-controlled, 52, 231, 352
  Differential theory described, 167–168
  Directive function of animation, 315–316
  Display panel interrogation patterns
    multimedia learning research study, 151, 155–156, 157–158, 161
    and user control in cognitive
      processing, 214, 229–230
  Domain-general knowledge
    comprehension and, 9–10, 11
    individual differences, effects on, 16
  Domain knowledge
    and animation design realism, 338–339
    in cognitive load theory, 197, 202, 230
    cognitive processing and, 343–344
    and comprehension, 9–12, 209
    flushing cistern experiments, 13, 19–21
Subject Index

interrogation of animations and, 66, 212, 215–216
and intrinsic load, 106–107
learning enhancement by, 9–12, 15–17, 25, 170, 177–178, 209, 364–365
and mental representations, 19–21, 66
in text comprehension, 5, 22
user-controllable animations, 220, 223, 224, 225, 230
Domain-relevant knowledge, comprehension and, 9–10
Domain-specific knowledge
animation and text learning, 22
comprehension and, 10–11, 15–17, 19–21
individual differences, effects on, 16
Dots, 312
Dual-channel theory
Animated Pedagogical Agents in, 189
described, 33, 143, 169
Dynamic contrast, 322, 334, 343
Dynamic visualizations
as content representations, 360–361
design and learning strategies, 72–74, 88–89
processing issues in, 71–72
Dynamic visualizations study
achievement
differences in, 82–86
overall, 79–82
cognitive processing
instructional materials, differences in, 86–87
strategies employed, 87–88
times, differences in, 84, 87
design
described, 74–75
and learning strategies, 72–74
materials/procedure, 75–79
user-control, results of, 211–212

Effectiveness of animations
by animation type, 100–105, 111–112
described, vii–viii, 3, 13
design and, 30–32, 242, 270, 291–292, 308, 349
enabling/facilitation functions, 100
in formal instruction, 288–289
hunting the Snark game, 297–298
in informal instruction, 293–294, 300
multimedia learning, 141, 142
playful instruction, 297–298, 300–301
sequential presentation, 40–41
simultaneous presentation, 40–41
time and date difference study, 100–102,
105, 107–109
Enabling functions in animations
as application, 145
defined, 105, 316–317
factors affecting, 102, 111–112, 366
manipulation pictures, 101, 107–109
stepwise simulation pictures, 104
Encoding in cognitive processing, 175–176
Essential processing. See also Intrinsic load
described, 35–36
management, principles of, 38, 41–43
Events as discrete thought forms, 266–267
Executable models, Teachable Agents,
118–119
Exhibits, 280
Expertise Reversal Effect, 12
Explanations, design of, 281–282
Exploded diagrams, 275
Expository representations,
student-authored
conventional simulations, similarity to
and student rating, 248–249, 253, 254, 256–257
domain knowledge in, 367
evaluation of, 240, 244–247, 249–255
learning, approaches to, 242–243
learning progression in, 254–255,
367–368
media use and student rating, 246, 248,
252–254, 255–256
overview, 235–238, 255, 366–367
student use of, 238–242, 256
Extra-pictoral devices, diagram
enrichment with, 271, 278, 281.

effectiveness of, as learning tool, 71 exploded, 275
extra-pictorial devices, enrichment with, 271, 278, 281
inference of motion from, 10, 15, 309–312, 340
and judgment of mechanical events, 8
limitations of, 288, 312
in machine model, 4–5
as narrative, 270–271
student-authored (See Expository representations, student-authored)
with text, comprehension of, 22–23
user interrogation of, 52
Statistics study
achievement differences in, 82–85, 86
overall, 79–82, 83
design, 74
instructional materials described, 75–77
processing, differences in, 86–87
learning procedure, 75–79
Stepwise simulation pictures
circumnavigation study, 103–104
enabling functions in animations, 104
facilitating functions in, 110, 111
in time zone difference display, 101–102
Steve described, 183
Strategy shift strategy, 154, 155
Stroop effect, 170
Structure/function, portrayal of, 271
Structure mapping, 88
Successive study strategy, 153, 154, 155, 160
Sweet spot. See Productive agency;
Teaching
Systematic alternation strategy, 153, 154, 155, 159
### Subject Index

- **Taxonomy, portrayal of**, 271
  - Teachable Agents (TAs)
    - agent thought structure, adoption of, 124–125
    - animated thought, benefits of, 125–126, 136
    - animations, use of, 114, 169
    - concept mapping, 124, 129
      - described, 115–117, 119, 135–137
    - design of, 123–124, 136
    - inclusion studies, 124–126
    - independent performance studies, 130–135
    - interactivity in, 115, 120
  - metacognition, promotion of, 127–130, 172
  - Moby, 130–133, 135
  - Mr. Davis, 127–129
  - principles of, 114–115
  - productive agency, achievement of, 119–122

- **Teaching**
  - agent thought structure, adoption of, 124–125
  - algorithms, 238–239
    - approaches to, 365–366
  - metacognition, promotion of, 127–130, 172
  - multiple perspective enhancement of, 257–258
    - sweet spot social interactions in, 122
  - Technology centered approach to design
    - described, 32, 167
  - Temporal categorization, principles of, 323–328
  - Temporal chunking, 325–327
  - Temporal contiguity principle, 37, 38, 40–41
  - Temporal patterns
    - portrayal of, 271, 275–276, 314–316
    - visual processing of, 333, 348
  - Temporal scale, animations rendition of, 269

- **Text**
  - benefits of, 5, 12, 21–22
  - comprehension
    - domain knowledge in, 5, 22
    - flushing cistern experiments, 21–24
    - high-spatial ability learners, 22
    - overview, 21–24, 26
    - design/learning strategy integration in, 73
  - learning and, 21–24, 334
  - Thought, animation of, 116
  - Time and date difference study
    - animation types, effectiveness of, 100–102, 105, 107–109
    - cognitive processing requirements, 100, 173
    - materials, 97, 102
  - Top-down model of animation
    - comprehension described, 4, 50
  - Top-down model of event processing, 323
  - Trajectory judgment
    - animation’s role in, 266
    - and spatial ability, 8–9
  - Transformation defined, 144
  - Transition defined, 145
  - Translation defined, 144–145
  - Triple-A Game Show, 118

- **Underwhelming phenomenon**, 148

- **User-controllable animations**. See also
  - Weather map animation study
    - benefits of, 52, 210, 345–346
    - dynamic systems, user comprehension of, 50–51
    - features of, 212–214
  - gear function study
    - comprehension test scores, 224
    - comprehension tests described, 220–222
    - domain knowledge in, 220, 223, 224, 225, 230
    - learning gains in, 223–225
    - methods, 216–222
overview, 216, 229–231
results, 222–229
spatial ability measurement, 220, 221–223, 228
study time analysis, 226–228, 229
overview, 345
processing challenges, 49, 51–53, 208–210
signaling cues in, 215–216, 219–220, 224, 225
strategic use of, 347
task content in, 214–215
vs. noncontrollable, 210–212

Verbal style of learning, 172, 173
Visual attention, comprehension and, 11, 142–143
Visual communication, history of, 306–308
Visualization
comprehension and, 11, 142–143
dynamic (See Dynamic visualizations; Dynamic visualizations study)
spatial (See Spatial visualization ability)
support, as animation application, 145
VISUALSTAT, 75–77
Voice principle, 37, 38, 44–45

Weak alternation strategy, 154, 155
Weather map animation study
animation section replay, 63–64
cognitive processing requirements, 173,
214–215
cognitive processing strategies, 147, 237
data analysis, 56–57
described, 53–54, 66–68, 147
domain knowledge in comprehension, 209
frame visit distribution patterns,
59–60, 61–62, 66
interrogation patterns, 57–58, 60,
62–63, 64, 66, 147, 213
interrogation scope, 60–62, 66
interrogation speeds, 60–61, 62–63, 64
mental animation adequacy in, 66
method, 55, 56
procedure/materials, 54–56
WhizLow described, 183
Woggles, 293–294
Word/picture/gesture parallels, 280
Working memory
in cognitive processing, 93–94, 106–107,
176, 316–317, 342–343
enabling/facilitating functions, 94–100
experimental vs. differential
approaches to, 168
germane load and, 106–107, 176
and the modality effect, 196–197, 201
visual perception and, 329–330

Zone of proximal development (ZPD),
105–107, 108, 110
