- adaptive Runge–Kutta method, 275–283
- algebra. *See* linear algebraic equations systems;
 - matrix algebra
- appendices, 409–412
- arithmetic operators, in Python, 7
- arrays
 - accessing/changing, 21
 - copying, 23
 - creating, 19–21
 - functions, 22–23
 - operations on, 21–22
- augmented assignment operators, 7
- augmented coefficient matrix, 28
- backward finite difference approximations, 183
- banded matrix, 56–66
- `bisect`, 145–146
- bisection method, for equation root, 145–148
- brent, 150–151
- Brent’s method, 148–153
- Bulirsch–Stoer algorithm, 286–290
- Bulirsch–Stoer method, 278–279, 283
 - algorithm, 286–290
 - midpoint method, 283–284
 - Richardson extrapolation, 284–286
- `bulStoer`, 287
- byte code, 1
- `choleski(a)`, 47–48
- Choleski’s decomposition, 45–52
- `cmath` module, 18–19
- coefficient matrices, symmetric/banded, 56–66
 - symmetric, 59–60
 - symmetric/pentadiagonal, 61–66
 - tridiagonal, 57–59
- comparison operators, in Python, 8
- composite Simpson’s 1/3 rule, 204
- composite trapezoidal rule, 200–201
- conditionals, in Python, 9
- `conjGrad`, 86, 90
- conjugate gradient methods, 86, 88–96, 389–400
 - conjugate directions, 390–391
 - Fletcher–Reeves method, 396–400
 - Powell’s method, 391–396
- continuation character, 6
- `cubicSpline`, 117–119
- cubic splines, 115–121, 195
- curve fitting. *See* interpolation/curve fitting
- cyclic tridiagonal equation, 94
- deflation of polynomials, 172–173
- diagonal dominance, 68
- Doolittle’s decomposition, 42–45
- `dot`, 3
- `eigenvals3`, 371–372
- eigenvalue problems. *See* symmetric matrix
 - eigenvalue problems
- elementary operations, linear algebra, 31
- embedded integration formula, 275
- equivalent linear equation, 31
- error
 - control in Python, 15
 - in finite difference approximations, 186–187
- Euler’s method, stability of, 272
- Euler–Maclaurin summation formula, 201
- `evalPoly`, 172
- evaluation of polynomials, 170–172
- exponential functions, fitting, 130–131
- false position method, roots of equations, 179
- finite difference approximations, 181–187
- errors in, 186–187

- finite difference approximations (*cont.*)
 - first central difference approximations, 182–183
 - first noncentral, 183–184
 - second noncentral, 185
- finite elements, 233
- first central difference approximations, 182–183
- first noncentral finite difference approximations, 183–184
- `fletcherReeves`, 397–398
- Fletcher–Reeves method, 396–400
- forward finite difference approximations, 183
- fourth-order differential equation, 316–320
- fourth-order Runge–Kutta method, 257–265
- functions, in Python, 15–16
- `gaussElimin`, 37–38
- Gauss elimination method, 33–41
 - algorithm for, 35–38
 - back substitution phase, 37
 - elimination phase, 35–36
 - back substitution phase, 35
 - elimination phase, 34–35
 - multiple sets of equations, 38–41
- Gauss elimination with scaled row pivoting, 68–76
- Gaussian integration, 215–230
 - abscissas/weights for Gaussian quadratures, 221–230
 - Gauss–Chebyshev quadrature, 222
 - Gauss–Hermite quadrature, 223
 - Gauss–Laguerre quadrature, 222–223
 - Gauss–Legendre quadrature, 221–222
 - Gauss quadrature with logarithmic singularity, 224
 - determination of nodal abscissas/weights, 219–221
 - formulas for, 215
 - orthogonal polynomials, 217–219
- Gauss–Jordan elimination, 32
- Gauss–Legendre quadrature over quadrilateral element, 233–240
 - `gaussNodes`, 224–225
 - `gaussPivot`, 71–72
 - `gaussQuad`, 225–226
 - `gaussQuad2`, 235–237
 - `gaussSeidel`, 87–88
- Gauss–Seidel method, 85–88
 - `gerschgorin`, 368–369
 - Gershgorin's theorem, 368–369
 - golden section search, 383–389
 - `goldSearch`, 385–386
- Higher-order equations, shooting method, 301–307
- householder, 362–363
 - householder reduction to tridiagonal form, 357–365
 - accumulated transformation matrix, 361–365
 - householder matrix, 358–359
 - householder reduction of symmetric matrix, 359–361
- Idle (code editor), 3
- ill-conditioning, 29–30
- incremental search method, roots of equations, 143–145
- indirect methods. *See* iterative methods
- initial value problems
 - adaptive Runge–Kutta method, 275–283
 - Bulirsch–Stoer method, 278–279, 283
 - algorithm, 286–290
 - midpoint method, 283–284
 - Richardson extrapolation, 284–286
 - introduction, 248–249
 - multistep methods, 294
 - problem set, 266–271, 290–294
 - Runge–Kutta methods, 255–265
 - fourth-order, 257–265
 - second-order, 255–257
 - stability/stiffness, 271–275
 - stability of Euler's method, 272
 - stiffness, 272–275
 - Taylor series method, 249–255
- Input/output
 - printing, 14–15
 - reading, 13
- integration order, 234
- interpolation, derivatives by, 190–195
 - cubic spline interpolant, 195
 - polynomial interpolant, 190–191
- interpolation/curve fitting
 - interpolation with cubic spline, 115–121
 - introduction, 103
 - least-squares fit, 124–137
 - fitting a straight line, 126
 - fitting linear forms, 126–127
 - polynomial fit, 127–129
 - weighting of data, 129–137
 - fitting exponential functions, 130–131
 - weighted linear regression, 130
 - polynomial interpolation, 104–115
 - Lagrange's method, 104–105
 - limits of, 110–115

- Neville's method, 108–110
- Newton's method, 105–108
- problem set, 121–124, 137–140
- rational function interpolation, 140–141
- interval halving method. *See* bisection method
- `inversePower`, 345–346
- `inversePower3`, 373–374
- iterative methods, 85–96
 - conjugate gradient method, 86, 88–96
 - Gauss–Seidel method, 85–88
- `jacobi`, 331
- Jacobian matrix, 235
- Jacobi method, 326–342
 - Jacobi diagonalization, 328–333
 - Jacobi rotation, 327–328
 - similarity transformation/diagonalization, 326–327
 - transformation to standard form, 333–342
- Jenkins–Traub algorithm, 179–180
- knots of spline, 115
- Kronecker delta, 104
- Lagrange's method, 104–105
- Laguerre's method, 173–178
- `linspace`, 369–370
- LAPACK (Linear Algebra PACKAGE), 27
- least-squares fit, 124–137
 - fitting linear forms, 126–127
 - fitting straight line, 126
 - polynomial fit, 127–129
 - weighting data, 129–137
