<i>Preface</i>	<i>page</i> xiii
<i>Acknowledgments</i>	xxi
PART I: THE LAGRANGIAN FORMULATION	1
1 Lagrangian kinematics	5
1.1 Conservation of particle identity	5
1.2 Streaklines, streamlines and steady flow	11
1.3 Local kinematics	13
2 Lagrangian statistics	16
2.1 Single-particle, single-time statistics	16
2.2 Single-particle, two-time statistics	20
2.3 Two-particle, two-time statistics	21
2.4 The Eulerian–Lagrangian problem: path integrals	21
3 Lagrangian dynamics	25
3.1 Conservation of mass	25
3.2 Conservation of momentum	26
3.3 Conservation of energy	30
3.4 Variational principle	32
3.5 Bernoulli’s theorem	33
3.6 Kelvin’s theorem	34
3.7 Cauchy–Weber integrals	36
3.7.1 First integrals	36
3.7.2 Matrix formulation	39
3.7.3 Cauchy–Weber integrals and Clebsch potentials	40

viii	<i>Contents</i>	
	3.8 Potential flow and a Riemannian metric	41
	3.9 Boundary conditions	43
	3.9.1 Rigid boundaries	43
	3.9.2 Comoving boundaries	43
	3.9.3 Comoving boundary conditions	44
	3.9.4 Adjacent Lagrangian coordinates	48
	3.10 Local dynamics	48
	3.11 Relabeling symmetry	50
	3.12 Historical note	55
4	Coordinates	56
	4.1 Independent variables	56
	4.2 Dependent space variables	57
	4.3 Rotational symmetry	59
	4.3.1 Globally uniform rotations	59
	4.3.2 Time-varying rotations	59
5	Real fluids	62
	5.1 Viscous stresses and heat conduction	62
	5.2 Navier–Stokes equations for incompressible flow	62
	5.3 Matrix formulation for viscous incompressible flow	64
	5.4 Boundary conditions	65
	PART II: LAGRANGIAN FLOWS	67
6	Some analytical Lagrangian solutions	71
	6.1 Flow around a cylinder	71
	6.2 Gerstner’s trochoidal wave	72
	6.3 One-dimensional gas dynamics	76
	6.3.1 One-dimensional traveling waves	76
	6.3.2 Riemann invariants	77
	6.3.3 Arbitrary one-dimensional flow	77
	6.4 Plane Poiseuille flow	78
7	Sound waves, shear instabilities, Rossby waves and Ptolemaic vortices	79
	7.1 Sound waves	79
	7.2 Hydrodynamic stability	80
	7.3 Rossby waves	82
	7.4 Hamiltonian dynamics of Rossby waves	87

<i>Contents</i>		ix
7.5	Plane Ptolemaic vortices	88
7.6	Sheared Ptolemaic vortices	91
8	Viscous incompressible flow	94
8.1	Simple shear flow	94
8.2	The suddenly accelerated plane wall: Stokes' first problem	95
8.3	Flow near an oscillating flat plate: Stokes' second problem	96
8.4	The boundary layer along a flat plate	97
9	General solvability	99
9.1	Kinematics	99
9.2	Incompressible dynamics (1)	99
9.3	Incompressible dynamics (2)	102
9.4	Incompressible dynamics (3)	103
9.5	Compressible dynamics	105
9.6	Labeling singularities	107
9.7	Phenomenology	108
9.8	Viscous incompressible flow	110
9.8.1	Equations of motion	111
9.8.2	Picard iteration	112
9.8.3	<i>A priori</i> bounds	113
9.8.4	The viscous operator	113
9.8.5	The elliptic operator	115
	PART III: DIFFUSION	117
10	Absolute dispersion	123
10.1	Displacement: first and second moments	123
10.2	Displacement pdf	125
10.3	Forward closure, boundary conditions	127
10.4	Backward closure, scalar concentrations	131
10.5	Reversibility for incompressible flow; the Markov property, Corrsin's hypotheses	133
10.6	Scalar concentrations in compressible flow; floats, surface drifters and balloons	137
10.7	Corrections	138
10.8	Random flight models and plankton dynamics	141
10.9	Annual plankton patchiness	143

11	Relative dispersion	146
11.1	Joint displacement of a pair of particles	146
11.2	Separation of a pair of particles	150
11.3	Richardson's self-similar asymptotic solution	153
11.4	Lundgren's log normal solution	155
11.5	Observations of dispersion	158
11.6	Kinetic energy subranges	162
11.7	Kinetic energy spectra and structure functions	167
11.8	Kinetic energy spectra and longitudinal diffusivities	170
12	Convective subranges of the scalar variance spectrum	177
12.1	Scalar covariance	177
12.2	Reversibility	179
12.3	Power spectra	179
12.4	Enstrophy inertia convective subrange	181
12.5	Energy inertia convective subrange	182
12.6	Viscous convective subrange	185
12.7	Transition	186
12.8	Relative dispersion and plankton patchiness	188
13	Diffusion	191
13.1	Scalar diffusion: An approximate general solution	191
13.2	Variance spectrum	194
13.3	Enstrophy inertia diffusive subrange	196
13.4	Energy inertia diffusive subrange	198
13.5	Viscous diffusive subrange	200
	PART IV: LAGRANGIAN DATA	207
14	Observing systems	211
14.1	The laboratory	211
14.2	The atmosphere	212
14.3	The ocean surface	212
14.4	The deep ocean	214
15	Data analysis: the single particle	216
15.1	Time series analysis: the single particle	216
15.1.1	Polarization of Lagrangian velocities	216
15.1.2	Diffusivities from floats	221

<i>Contents</i>		<i>xi</i>
15.2	Assimilation: the single particle	228
15.2.1	Lagrangian measurement functionals	229
15.2.2	Lagrangian assimilation: first steps	232
16	Data analysis: particle clusters	238
16.1	Time series analysis: the particle pair	238
16.2	Assimilation: particle clusters	241
16.2.1	Eulerian kinematical analysis	241
16.2.2	Lagrangian dynamical analysis: shallow-water theory	246
16.2.3	Lagrangian dynamical analysis: Boussinesq theory	253
16.2.4	Least-squares estimator	257
